GATES PETERSON

Information Systems Architecture for National and International Statistical Offices Vacation Work Publications
This book explores the causes of public opposition to immigration in three industrialized Western countries.

The Mirror of Literature, Amusement, and Instruction Springer Science & Business Media

This is the next generation of business dictionaries. Including modern banking, accounting, insurance, real estate, import-export, taxes, business law and computer terms, this is an essential resource for those working in multilingual, multicultural business fields.

The Effects of the Covid-19 Pandemic on Sport: Mental Health Implications on Athletes, Coaches and Support Staff Vacation Work Publications

This handbook addresses the historical background of the Islamic world and reviews its basic past intellectual achievements. It studies social progress of these regions and sub-regions in comparison with other parts of the world. It uses large data sets and well established statistically weighted Indexes in order to assess the nature and pace of the multiple facets of social change in member states of the Organization of Islamic Cooperation (OIC). The handbook extensively discusses the main challenges confronting the Islamic nations in the social, economic, political, and ideological fields. Though it is recognizable that social change in the Islamic World is generally positive, it remains highly variable in pace and there is room to speed it up to the benefit of millions of deprived Muslim people. Hence, the book studies the different propositions and programs of action, such as the United Nations' Millennium Development Campaign and the OIC's Ten-Year Programme of Action to present an integrated and comprehensive agenda of action to help improve the situation in the Islamic World.

Migrant Youths and Children of Migrants in a Globalized World (The ANNALS of the American Academy of Political and Social Science Series)

Trajectories and Origins: Survey on the Diversity of the French Population IGI Global

Human beings are active agents who can think. To understand how thought serves action requires understanding how people conceive of the relation between cause and effect, between action and outcome. In cognitive terms, how do people construct and reason with the causal models we use to represent our world? A revolution is occurring in how statisticians, philosophers, and computer scientists answer this question. Those fields have ushered in new insights about causal models by thinking about how to represent causal structure mathematically, in a framework that uses graphs and probability theory to develop what are called causal Bayesian networks. The framework starts with the idea that the purpose of causal structure is to understand and predict the effects of intervention. How does

intervening on one thing affect other things? This is not a question merely about probability (or logic), but about action. The framework offers a new understanding of mind: Thought is about the effects of intervention and cognition is thus intimately tied to actions that take place either in the actual physical world or in imagination, in counterfactual worlds. The book offers a conceptual introduction to the key mathematical ideas, presenting them in a non-technical way, focusing on the intuitions rather than the theorems. It tries to show why the ideas are important to understanding how people explain things and why thinking not only about the world as it is but the world as it could be is so central to human action. The book reviews the role of causality, causal models, and intervention in the basic human cognitive functions: decision making, reasoning, judgment, categorization, inductive inference, language, and learning. In short, the book offers a discussion about how people think, talk, learn, and explain things in causal terms, in terms of action and manipulation.

Measuring psychosocial variables in epidemiologic studies of cardiovascular disease Indiana University Press

Mobilities within the European Union (EU) have changed significantly since the classical intra-regional migrations of the 1950s–1970s. After a period of reduced, less visible flows in the 21st century mobilities increased again, first linked to EU expansion towards the East, and from 2008, with renewed South-North flows following the impact of the Great Recession on Southern European countries. It is in this context that the current volume explores how these recent migrations reflect new and more complex patterns of mobility, increasingly uncertain and unstable, involving both natives and naturalised migrants. It also seeks to unpack the multiple connections between these new migration systems and other systems affecting social protection, gender and citizenship, and how these intersect with other factors such as class, age, race and ethnicity. The different chapters of the book examine this covering a wide variety of cases, including intra-EU flows from Portugal and Spain, recent Spanish and Latin American migrants in London, Paris and Brussels, and Romanian migration to the UK and France, thus adding to its richness. This book will be of interest to academics, researchers and advanced students of Sociology, Anthropology, Geography, Gender Studies, Public Policy, and Politics. It was originally published as a special issue of *Ethnic and Racial Studies*.

Evolution and Adaptation Springer Nature

"The different ways in which a language may be pronounced is not only a constant source of fascination for speakers and learners, but also a powerful symbol of regional identity. Using recordings of spontaneous speech by working-class speakers from an urban, industrial environment in northern France, Tim Pooley traces the development of the urban vernacular of the Lille area - often referred to as Chtimi - from a traditional patois to a variety of Regional French against the background of the social changes that have occurred in the speakers' lifetimes." "The result is, firstly, a study in sociolinguistic variation (both from the structural and sociolinguistic viewpoints); secondly, an analysis of language shift in a context where the obsolescent language is closely related to the dominant variety; and thirdly, a detailed analysis of the key features of the phonology and grammar of northern Regional French." "It is also one of the first studies concerned with France to show how network factors may influence speakers' use of French."--BOOK JACKET. Title Summary field provided by Blackwell North America, Inc. All Rights Reserved

Measuring Psychosocial Variables in Epidemiologic Studies of Cardiovascular Disease Springer

This stimulating and insightful book reveals how increased control over immigration has changed cultural and social production in theater, literature, and even museum construction. Dominic Thomas's analysis unravels the complex cultural and political realities of long-standing mobility between Africa and Europe. Thomas questions the attempt to place strict limits on what it means to be French or European and offers a sense of what must happen to bring about a renewed sense of integration and global Frenchness.

Alan Rogers France 2007 - Quality Camping & Caravanning Sites Oxford University Press, USA

Banking across the world has undergone extensive changes thanks to the profound influence of developments and trends in information communication technologies, business intelligence, and risk management strategies. While banking has become easier and more convenient for the consumer, the advances and intricacies of emerging technologies have made banking operations all the more cumbersome. *Advances in Banking Technology and Management: Impacts of ICT and CRM* examines the various myriads of technical and organizational elements that impact services management, business management, risk management, and customer relationship management, and offers research to aid the successful implementation of associated supportive technologies.

The Populist Challenge DigiCat

This guide is designed for anyone interested in living or working, starting a business, retiring, or just buying a holiday home in France. It contains major sections devoted to permanent employment and careers in France. These include the types of job available, job hunting techniques, making applications, attending interviews, salary details, as well as a guide to major employers and French industry. It also includes background information on the French way of life including facts on buying a home, city and regional guides, and health and education systems.

Au Cœur de la Protestation Springer

How well are the French? What are the most important health-related issues for children of under 15 years of age, for young and older adults, for the elderly? What geographically and socially based inequalities affect health status? How can patients and users of the health care system -- members of the public -- be brought into the making of decisions that affect them in this literally vital field? Is our health care system well organised? And is it working in an efficient and democratic way? How are questions of resource allocation settled? This is the third in a series of official reports (the previous ones were published in 1994 and 1998) compiled by the High Committee on Public Health to analyse health status in the country, with an in-depth review of the strengths and weaknesses of the system as a whole. This report combines a critical analysis of the current health care system with a review of key current and projected health-related issues, focusing on public health targets identified from as broad and all-inclusive a perspective as possible.

Empirical Studies on Working Hours and Labour Market Flows Routledge

During the last decade and a half a new political party family, the extreme Right-wing populist (ERP) parties, has established itself in a variety of West European democracies. These parties represent a monist politics based on ethnic nationalism and xenophobia as well as an opposition against the 'political establishment'. Being the prototypic ERP party, the French Front National (FN) has been a model for ERP parties emerging elsewhere in Western Europe. This study presents a theoretically based explanation that combines the macro and the micro-level, as well as the political supply and the demand-side. More specifically, this study shows that it is necessary to consider both opportunity structures, created by demand and supply-side factors, as well as the ability of the FN to take advantage of the available opportunities. Of particular interest is the author's analysis of the sociology and attitudes of the FN-voters.

Women in Science: Aging and Public Health 2022 Marshall Cavendish

This open access book examines the economic, social, and psychological consequences of manufacturing plant closure at the individual level. Using an original data set of over 1,200 workers from Switzerland who lost their manufacturing jobs after

the financial crisis of 2008, the author analyzes the determinants of reemployment, the sector of reemployment, and the change in wages over a two year period. In addition, coverage also explores how plant closure affects the social relationship between a displaced worker and his or her significant other, which includes a discussion of the coping strategies on the household level as well as how changes in a worker's social and occupational life affects overall satisfaction. Readers will discover that the burden of structural change disproportionately falls on the shoulders of workers aged 55 and older who often face substantial barriers when trying to return to employment. A larger portion of this group experience long-term unemployment and those who do manage to find a new job often suffer disproportionate wage loss. This result is intriguing in the context of the current demographic change and contradicts the common assumption that young and low-qualified individuals are at greatest risk of unemployment. Advanced age—and not low education—appears to be the primary obstacle to workers finding job satisfaction after being laid off because of market conditions.

New Trends in Intra-European Union Mobilities Berghahn Books
For millions of individuals all over the world, speaking in a second language is a daily activity. It is therefore important that research in applied linguistics should contribute empirically to the study of second language spoken interaction. The aim of this volume is to make such a contribution by providing research-based insights into current approaches to the teaching and learning of this skill. Two key dimensions define the papers included here—their novelty and scope. First, the book provides a novel approach to the study of speaking in a second language by combining recent findings in usage-based linguistics with current issues in teaching. Second, the chapters cover a range of theoretical perspectives, including sociolinguistic and interactional competence, gestures, dynamic systems theory and code-switching. The volume offers a contemporary analysis of research in second language speaking that will be of interest to researchers, graduate students, teachers and other professionals working in the fields of communication and applied linguistics.

Causal Models : How People Think about the World and Its Alternatives John Libbey Eurotext

This guide is designed for anyone interested in living or working, starting a business, retiring, or just buying a holiday home in France. Contains major sections devoted to permanent

employment and careers in France including types of job available and job hunting techniques.

Living & Working in France Cambridge University Press

Feminism in France has a long and continuous history which stretches right back to the Middle Ages where one finds texts by women denouncing inequality and the unjust subordination of their sex. In the late sixties and early seventies of this century, however, one finds a radical break with the feminism that preceded it. Marked by a libertarian culture influenced by Marxism, socialism and psychoanalysis, the feminism of the 1970s rejected the reformist and legal vision of women's emancipation, politicised the private sphere, and demanded social and political equality. This remarkable anthology of 35 texts, freshly translated for this volume, vividly maps the terrain of French feminism in its contemporary context from the 1970s onwards. Bringing together the seminal writings of both scholars and activists, the volume will help readers to grasp the questions, the challenges, and the progress of reflection. The essays are divided into seven sections: - The Women's Liberation Movement in France - Women and Creativity - Writing History / Rewriting History - Race, Class, Gender - Legal Bodies / Women's Bodies - Occupying / Capturing Political Space - Feminists Defetishize Theory - Feminist Mappings Overall, this absorbing volume gives voice to the extraordinary range of contemporary French feminism. Each section is preceded by an introduction which places the contributions in their material and social contexts to show how French feminism has evolved in response to concrete struggles and institutional constraints as much as to sophisticated intellectual discourse. Given its unique comparative framework and wide-ranging coverage, this volume will attract the attention of students and scholars in the fields of feminism, gender and women's studies, sociology, history, literature, anthropology, and philosophy.

Trustworthy Global Computing CUP Archive

The chapters presented in this book were written by Thomas Hunt Morgan, an American evolutionary biologist, geneticist, embryologist, and science author who won the Nobel Prize in Physiology or Medicine in 1933 for discoveries elucidating the role that the chromosome plays in heredity. Here, he lays out his ideas on the relations between the organism and its environment and whether Darwinian ideas are enough to explain some of the phenomena he observed during his studies, especially those of regeneration.
