SmartPrep IB Flash Cards GradePod

This book takes a fresh look at programs for advanced studies for high school students in the United States, with a particular focus on the Advanced Placement and the International Baccalaureate programs, and asks how advanced studies can be significantly improved in general. It also examines two of the core issues surrounding these programs: they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs, this report

provides teachers, parents, curriculum developers, administrators, college science and mathematics faculty, and the educational research community with a detailed assessment that can be used to guide change within advanced study programs.

Learning and Understanding Hodder Education

Comprehensive coverage of all the essential material for the 2007 syllabus in one user-friendly guide. Written by an experienced IB teacher and exactly mapped to the syllabus, it supports excellence in assessment. Past exam questions noticeably build confidence, and the focused approach distinctly strengthens comprehension.

Ib Physics Option Relativity Dot Point Cambridge University Press
Physics for use with the IB Diploma Programme, written by Michael J. Dickinson is a complete and concise learning resource for both students and teachers alike. Written in plain English with an international audience in mind - many of whom are known to be second language English learners - it follows the IB Physics syllabus (for first examinations in 2009) in a linear and sequential manner. This textbook contains: * All eight of the Standard Level (core) topics. IB topics 1 - 8. * All six of the Additional Higher Level (AHL) topics. IB topics 9 - 14. * Selected Standard Level Options. Options A to C. * Selected Higher Level Options. Options G and H. * Identification of syllabus statements, formulae, definitions and problems to enable easy navigation. * Detailed illustrations to support the detailed explanations of each concept. * Numerous problems (including worked solutions), many of which have been taken from past IB examination papers. * All laws and definitions that are needed for the IB Physics syllabus, summarized at the end of the book. * All formulae, constants, multipliers and symbols that are needed for the IB Physics syllabus, summarized at the beginning of the book.
