Encyclopedia of the Anthropocene presents a currency-based, global synthesis cataloguing the impact of humanity's global ecological footprint. Covering a multitude of aspects related to Climate Change, Biodiversity, Contaminants, Geological, Energy and Ethics, leading scientists provide foundational essays that enable researchers to define and scrutinize information, ideas, relationships, meanings and ideas within the Anthropocene concept. Bioinvasions is a current top research subject for natural sciences, social sciences and humanities and a major concern for conservationists, land managers and planners. In the last decades, new findings, perspectives and practices have revealed the multifaceted challenges of preventing new introductions and dealing with those invasive species that harm natural ecosystems, economy and human welfare. This book brings together environmental historians and natural scientists to share their studies and experiences on the human dimensions of biological invasions from the ancient past to the current challenges. The collection of papers focuses on the Mediterranean region and deals with aquatic and terrestrial ecosystems on the mainland and islands, ranging from marine and freshwater environments to coastal marshlands and forests. A wide diversity of animals and plants are featured, from marine fishes to marine and freshwater crustaceans, invertebrates, reptiles and amphibians, birds and mammals, to grasses, shrubs and trees. This book is a contribution to the scientific debate on how to deal with the historical dimensions of biological invasions, fostering dialogue between cultural and ecological explanations of environmental change, to inform environmental policy and management. It has been organized in three sections: the first is the editors' introduction, in which they review the existing literature and highlight relevant concepts and ideas; the second is about alien species in the Mediterranean region; the third includes cases from other Mediterranean-type regions.

The Law Chronicle Columbia University Press

A bridge is constructed by this volume between the separate professions and disciplines of international lawyers and social scientists. The authors attempt to restate international law, both its jurisprudence and its rules, in social science terms. The authors then explicitly set forth the reciprocal relationships between international law and the findings, perspectives, and literature of the social sciences—showing how the insights and concepts of political science, sociology, psychology, and other disciplines can illuminate the field of international law. The limits as well as utility of social science materials in the comprehension, teaching, and practice of international law are evaluated.

Harwood-Nuss' Clinical Practice of Emergency Medicine Springer

From New York Times bestselling author Sam Kean comes incredible stories of science, history, finance, mythology, the arts, medicine, and more, as told by the Periodic Table. Why did Gandhi hate iodine (I, 53)? How did radium (Ra, 88) nearly ruin Marie Curie's reputation? And why is gallium (Ga, 31) the go-to element for laboratory pranksters?* The Periodic Table is a crowning scientific achievement, but it's also a treasure trove of adventure, betrayal, and obsession. These fascinating tales follow every element on the table as they play out their parts in human history, and in the lives of the (frequently) mad scientists who discovered them. THE DISAPPEARING SPOON masterfully fuses science with the classic lore of invention, investigation, and discovery--from the Big Bang through the end of time. *Though solid at room temperature, gallium is a moldable metal that melts at 84 degrees Fahrenheit. A classic science prank is to mold gallium spoons, serve them with tea, and watch guests recoil as

their utensils disappear.

Aliens and Sojourners Prentice Hall

Early Christians spoke about themselves as resident aliens, strangers, and sojourners, asserting that otherness is a fundamental part of being Christian. But why did they do so and to what ends? How did Christians' claims to foreign status situate them with respect to each other and to the larger Roman world as the new movement grew and struggled to make sense of its own boundaries? *Aliens and Sojourners* argues that the claim to alien status is not a transparent one. Instead, Benjamin Dunning contends, it shaped a rich, pervasive, variegated discourse of identity in early Christianity. Resident aliens and foreigners had long occupied a conflicted space of both repulsion and desire in ancient thinking. Dunning demonstrates how Christians and others in antiquity capitalized on this tension, refiguring the resident alien as being of a compelling doubleness, simultaneously marginal and potent. Early Christians, he argues, used this refiguration to render Christian identity legible, distinct, and even desirable among the vast range of social and religious identities and practices that proliferated in the ancient Mediterranean. Through close readings of ancient Christian texts such as Hebrews, 1 Peter, the Shepherd of Hermas, and the Epistle to Diognetus, Dunning examines the markedly different ways that Christians used the language of their own marginality, articulating a range of options for what it means to be Christian in relation to the Roman social order. His conclusions have

implications not only for the study of late antiquity but also for understanding the rhetorics of religious alienation more broadly, both in the ancient world and today.

The Law Practice of Alexander Hamilton Elsevier

This book updates prior research that utilized the perceptions of criminal investigators of the Immigration & Naturalization Service (INS), and compares these perceptions with immigration enforcement priorities that were implemented post 9/11, through the Obama Administration up to the Trump presidency. The legacy INS attempted to provide both a service and control function, which made it difficult for INS investigators to fulfill their mission of interior enforcement of the immigration laws. Other problems that surfaced included organizational relations, as well as notions about professionalism, which affected recruitment, retention, training, and worker expectations. The creation of the Department of Homeland Security (DHS) should have addressed these issues relating to immigration enforcement with the intent of solving some of the underlying problems. However, policies and ideological issues exacerbated efforts to enforce the immigration laws. The updated material in this third edition discusses how the interaction between an organization and the environment in which it operates, contributes to effectiveness with specific reference to the organization's stated mission, A review of immigration laws and agency policies, including executive orders, priorities, the impact of sanctuary cities, and consideration of the wider variables impacting illegal migration among other issues, were also analyzed.
