Examines the life cycle of a Nature Upclose: An Earthworm's Life **Garden Wigglers** Wonder Publishing

Earthworms dig tunnels in the ground that help plants grow. They find their food by eating dirt. These engaging facts and more are waiting to be discovered in Earthworms, an Animals in My Backyard book. Earthworms is part of the Let's Read collection of media enhanced books designed for children ages 5 to 7. These books were created to inspire beginning readers to become independent readers. Educator and reading expert Dr. Edward Fry created a list of 1,000 instant sight words. These 1,000 sight words must be learned by students in elementary grades. By the third grade, students are expected to instantly recognize the first 300 of these words. The Let's Read books combine these 300 sight words with vivid color photography and non-fiction content within a kindergarten to second grade curriculum framework. Each AV2 media enhanced book is a unique combination of a printed book and exciting online content that brings the book to life. Readers can access embedded weblinks, audio and video clips, activities, and other features, such as a slide show, matching word activity, and quiz. Book jacket.

Deep underground and on the surface, worms are hard at work! Worms work like little plows, burrowing through soil by swallowing it. As they make their way through the dirt, worms loosen the soil so roots can spread and grow. Worms eat the bits of leaves and plants mixed with the dirt and leave behind castings that feed the plants. Find out how worms help us as they wiggle their way underground.

Earthworms Harper Collins

It's a cool, damp night, and a wriggling worm searches for food in a garden. Before the sun rises, it returns to its home in the soil. Tiny hairs on the worm's skin grab the dirt to help the crawler move forward. As the worm squirms underground, its long body breaks up the soil and creates tunnels. Welcome to the worm's hole! Clear text, colorful photos, and diagrams will engage young readers as they explore the habitat, physical characteristics, diet, and behavior of these curious creatures. Age-appropriate activities and critical-thinking questions give readers an opportunity to make observations and gain valuable insights.

Learn the funny and fascinating story of Charles Darwin and the groundbreaking discoveries that resulted from his love of the humble worm in this hilarious, illustrated children's book. Charles Darwin is widely known for his Origin of Species book, yet Darwin had another great love, and that was for worms. Told for the first time for children, this is the silly and fascinating true story of how Charles Darwin came to discover that the humble earthworm is the most important species on our planet. Darwin suspected worms were special but his scientist friends laughed at him. In a quest to find out the worms' special talent, Darwin played the bassoon to the worms to see if they could hear, laid out a picnic treasure hunt for them to see how well they could smell, among many other bizarre but entirely true experiments. But so far Darwin didn't find anything extra special about worms. Until, one day he realized that worms do have a superpower. They POOP!

Without their life-sustaining, nutrient-rich poop, there would be no plants and no animals on earth. Darwin's 40 years studying worms is still essential to our understanding of worms today, and ever since, scientists have taken him VERY seriously, and never again laughed at his love of worms. The story of Darwin and the worms not only centers around the perennially brilliant subject of poop, it: Teaches children about a key historic figure, the food cycle, and deductive scientific thinking. Is also a heartwarming story of the triumph of a zany underdog who won't let bullies get in the way of his love for worms. Is told in a humorous and engaging way, with nonfiction information on each page to help educate alongside the story. Features charming and humorous full-color illustrations. Curious minds will love this fact-filled, laugh-out-loud book.
