A Watershed Analysis of Land-use Trade-offs in a Semiarid Region : Report of a Conference, on the Front Range of Colorado, May 20-22, 1976, Greeley, Colorado Chelsea Green Publishing

Environmental sustainability efforts require a great deal of engagement and political will, ranging from local communities to state departments. Science diplomats—from experts and scientists to spokespersons and ambassadors—can help facilitate at all levels and yield valued resources from technology sharing, capacity building, and knowledge exchanges. This book explores the importance of sustained international scientific cooperation, building community resilience, and the role of political will in sustainability and diplomacy. It shows how even small diplomatic efforts can influence myriad issues, from overfishing to human rights negotiations to global carbon emission reduction. Features: • Examines various topics such as global climate change, arid environments, water security and governance, trans-boundary conflict and cooperation, urban and rural resilience, and public health. • Presents case studies from various geographic regions through the lens of diplomacy, including the US–Mexico border, the Gulf of California, South America, Europe, the Middle East, Central and South Asia, and China. • Discusses how building networks of people, organizations, and countries engaged in science diplomacy is crucial for mutual growth and for overcoming conflicting political stances. Sustainable Development for the Americas: Science, Health and Engineering Policy and Diplomacy provides a useful resource for diplomats, policymakers, students, and decision-makers. It provides numerous examples of how using science and technology for policy and diplomacy is essential to finding common ground among nations for a collective global benefit. *The Most Comprehensive Plan Ever Proposed to Reverse Global Warming* Handbook of development economics. 1

Tracing Pasolini's engagement with Rome and looking beyond his films to explore the interrelatedness of all of Pasolini's artistic output in the 1950s and 1960s, Rhodes opens up new ways of understanding Pasolini's work and proves how connected Pasolini was to the upheavals in Italy at the time.

A Prosperous Way Down (2001), the last book by Howard T. and Elisabeth C. Odum, has shaped politics and planning as nations, states, and localities begin the search for ways to adapt to a future with vastly increased competition for energy. *A Prosperous Way Down* considers ways in which a future with less fossil fuel could be peaceful and prosperous. Although history records the collapse of countless civilizations, some societies and ecosystems have managed to descend in orderly stages, reducing demands and selecting and saving what is most important. The authors make recommendations for a more equitable and cooperative world society, with specific suggestions based on their evaluations of trends in global population, wealth distribution, energy sources, conservation, urban development, capitalism and international trade, information technology, and education. Available for the first time in paperback, this thoughtful, provocative book forces us to confront assumptions about our world 's future and provides both a steadying hand and a call to action with its pragmatic analysis of a global transition.

Development Challenges, South-South Solutions: December 2011 Issue Routledge History Book

Hearings Cengage Learning

This book is a descriptive analysis of current influences in the world oil trade. It is concerned with a central unchanged paradox of the industry SH its preoccupation with maximising the production of high-cost rather than low-cost oil. It follows the rise and decline of OPEC monopoly power in the crude market, and shows how growth in the international oil business has almost ceased since the late seventies, exploring the reasons behind this slow-down. The author has had twenty-five years of practical consultancy in petroleum economics.

From Theory to Practice IDB

The Routledge Handbook of Transregional Studies brings together the various fields within which transregional phenomena are scientifically observed and analysed. This handbook presents the theoretical and methodological potential of such studies for the advancement of the conceptualization of global and area-bound developments. Following three decades of intense debate about globalization and transnationalism, it has become clear that border-crossing connections and interactions between societies are highly important, yet not all extend beyond the borders of nation-states or are of truly world-wide reach. The product of extensive international and interdisciplinary cooperation, this handbook is divided into ten sections that introduce the wide variety of topics within transregional studies, including Colonialism and Post-Colonial Studies, Spatial Formats, International Organizations, Religions and Religious Movements, and Transregional Studies and Narratives of Globalization. Recognizing that transregional studies asks about the space-making and space-formatting character of connections as well as the empirical status of such connections under the global condition, the volume reaches beyond the typical confines of area and regional studies to consider how areas are transcended and transformed more widely. Combining case studies with both theoretical and methodological considerations, The Routledge Handbook of Transregional Studies provides the first overview of the currently flourishing field of transregional studies and is the ideal volume for students and scholars of this diverse subject and its related fields.

Regional Development Theories and Their Application DSConsulting

Around the world, a new architectural form is emerging. In public places a progressive architecture is being commissioned to promote open-ended, undetermined, lightly programmed or un-programmed interactions between people. This new phenomenon of architectural form – Pavilions, Pop-Ups and Parasols – is presaged by rapidly changing social relationships flowing from social media such as Facebook, Twitter and Instagram. The nexus between real and virtual meeting is effectively being reinvented by innovative and creative architectural practices. People meet in new and responsive ways, architects meet their clients in new forums, knowledge is 'met' and achieved in new and interactive frameworks. It contrasts bluntly with the commercially structured interactions of shopping malls and the increasingly deliberate interactions available in cultural institutions. These experiences imbue a new type of client; casually engaged, flocking, hacking, crowd funding and self-helping.

Vol.4, Nos. 1-2 CRC Press

The past decade has been one of the most volatile periods in global petroleum markets in living memory, and future oil supply security and price levels remain highly uncertain. This poses many questions for the professional activities of planners and urbanists because contemporary cities are highly dependent on petroleum as a transport fuel. How will oil dependent cities respond, and adapt to, the changing pattern of petroleum supplies? What key strategies should planners and policy makers implement in petroleum vulnerable cities to address the challenges of moving beyond oil? How might a shift away from petroleum provide opportunities to improve or remake cities for the economic, social and environmental imperatives of twenty-first-century sustainability? Such questions are the focus of contributors to this book with perspectives ranging across the planning challenge: overarching petroleum futures, governance, transition and climate change questions, the role of various urban transport nodes and household responses, ways of measuring oil vulnerability, and the effects on telecommunications, ports and other urban infrastructure. This comprehensive volume – with contributions from and focusing on cities in Australia, the UK, the US, France, Germany, the Netherlands and South Korea – provides key insights to enable cities to plan for the age beyond petroleum.

Through a geographical lens Alan P. Marcus provides a new synthesis for interpreting the Confederado story and for understanding the impact of the various stakeholders who encouraged, aided, promoted, financed, and facilitated this broader emigration from the U.S. South to Brazil.

Living in the Environment: Principles, Connections, and Solutions DSConsulting

Permaculture is more than just the latest buzzword; it offers positive solutions for many of the environmental and social challenges confronting us. And nowhere are those remedies more needed and desired than in our cities. The Permaculture City provides a new way of thinking about urban living, with practical examples for creating abundant food, energy security, close-knit communities, local and meaningful livelihoods, and sustainable policies in our cities and towns. The same nature-based approach that works so beautifully for growing food—connecting the pieces of the landscape together in harmonious ways—applies perfectly to many of our other needs. Toby Hemenway, one of the leading practitioners and teachers of permaculture design, illuminates a new way forward through examples of edge-pushing innovations, along with a deeply holistic conceptual framework for our cities, towns, and suburbs. The Permaculture City begins in the garden but takes what we have learned there and applies it to a much broader range of human experience; we're not just gardening plants but people, neighborhoods, and even cultures. Hemenway lays out how permaculture design can help town dwellers solve the challenges of meeting our needs for food, water, shelter, energy, community, and livelihood in sustainable, resilient ways. Readers will find new information on designing the urban home garden and strategies for gardening in community, rethinking our water and energy systems, learning the difference between a "job" and a "livelihood," and the importance of placemaking and an empowered community. This important book documents the rise of a new sophistication, depth, and diversity in the approaches and thinking of permaculture designers and practitioners. Understanding nature can do more than improve how we grow, make, or consume things; it can also teach us how to cooperate, make decisions, and arrive at good solutions.

What is Project Independence? The sources and uses of energy in the United States have changed dramatically in the last several decades. As a result, in just one generation, we have shifted from a position of domestic energy abundance to a substantial and continually growing reliance on foreign energy sources. Project Independence is a wide-ranging program to evaluate this growing dependence on foreign sources of energy, and to develop positive programs to reduce our vulnerability to future oil cut-offs and price increases.

• New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world "At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception

of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope.” —Per Espen Stoknes, Author, *What We Think About When We Try Not To Think About Global Warming* “There’s been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom.” —David Roberts, Vox “This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook.” —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth’s warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

Throughout the world today former nation-states, as disparate as Yugoslavia, Somalia, and Canada, have either disintegrated or threaten to splinter into regions. The conflicts are economic, social, ethnic, linguistic, religious, political, and cultural. Higgins and Savoie analyze the reasons for these conflicts and show why attempts to eliminate regional disparities within nations have been largely unsuccessful. This volume is a highly readable, comprehensive survey of the literature and current debates in the fields of regional economics, development, policy, and planning.

Sustainability is the integrating theme of this current and thought-provoking book. *LIVING IN THE ENVIRONMENT* provides the basic scientific tools for understanding and thinking critically about the environment. Co-authors G. Tyler Miller and Scott Spoolman inspire students to take a positive approach toward finding and implementing useful environmental solutions in their own lives and in their careers. Updated with the most up-to-date information, art, and Good News examples, the text engages and motivates students with vivid case studies and hands-on quantitative exercises. The concept-centered approach transforms complex environmental topics and issues into key concepts that students will understand and remember. Overall, by framing the concepts with goals for more sustainable lifestyles and human communities, students see how promising the future can be. Sustainable Urban Mobility Pathways examines how sustainable urban mobility solutions contribute to achieving worldwide sustainable development and global climate change targets, while also identifying barriers to implementation and strategies to overcome them. Building on city-to-city cooperation experiences in Europe, Asia, Africa and Latin America, the book examines key challenges in the context of the Paris Agreement, UN Sustainable Development Goals and the New Urban Agenda, including policies needed to achieve a sustainable, low-carbon pathway for transport and how an integrated policy strategy is designed to provide a basis for political coalitions. The book explores which institutional framework creates sufficient political stability and continuity to foster the take-up of and long-term support for sustainable transport strategies. The linkages of climate change and wider sustainable development objectives are covered, including success stories, best practices, and quantitative analysis for key emerging economies in public transport, walking, cycling, freight and logistics, vehicle technology and fuels, urban planning and integration, and national framework policies. Provides a holistic view of sustainable urban transport, focusing on policy-making processes, the role of institutions and successes and pitfalls Delivers practical insights drawn from the experiences of actual city-to-city cooperation and on-the-ground policy work Explores options for the integration of policy objectives and institutional structures that form coalitions for the implementation of sustainable urban mobility solutions Describes the policy, institutional, political, and socio-economic aspects in cities in five emerging economies: Brazil, China, India, Mexico, and Turkey
