It was with the publication of Norbert Wiener's book "The Fourier Integral and Certain of Its Applications" [165] in 1933 by Cambridge University Press that the mathematical community came to realize that there is an alternative approach to the study of classical Fourier Analysis, namely, through the theory of classical orthogonal polynomials. Little would he know at that time that this little idea of his would help usher in a new and exiting branch of classical analysis called q-Fourier Analysis. Attempts at finding q-analogs of Fourier and other related transforms were made by other authors, but it took the mathematical insight and instincts of none other than Richard Askey, the grand master of Special Functions and Orthogonal Polynomials, to see the natural connection between orthogonal polynomials and a systematic theory of q-Fourier Analysis. The paper that he wrote in 1993 with N. M. Atakishiyev and S. K Suslov, entitled "An Analog of the Fourier Transform for a q-Harmonic Oscillator" [13], was probably the first significant publication in this area. The Poisson kernel for the continuous q-Hermite polynomials plays a role of the q-exponential function for the analog of the Fourier integral under consideration; see also [14] for an extension of the q-Fourier transform to the general case of Askey-Wilson polynomials. (Another important ingredient of the q-Fourier Analysis, that deserves thorough investigation, is the theory of q-Fourier series.

This exhibition interpreted Georgia's history through such objects as furniture, silver, textiles, paintings, iron work, ceramics, maps, and Native-American artifacts. More than 150 objects created by Georgia craftsmen before the Civil War composed the most comprehensive collection of Georgia-made objects ever assembled. The publication includes descriptions of the development of culture in Georgia, details of Georgia's native-American and decorative arts, and an evaluation of commemorative art in mid-nineteenth-century Georgia. The catalogue of works in the exhibition illustrates the relationship between historical events in Georgia and the quality of arts that emerged from the state during those periods of time.

"AAPG Memoir 79, The Circum-Gulf of Mexico and the Caribbean, is the first volume in more than a decade to document such a wide range of research on the geology of this vast area. Of the total 44 papers, roughly two-thirds pertain to the Gulf of Mexico, with an emphasis on the Mexican portion of the basin, and to the petroliferous areas of the southern Caribbean, including Colombia, Venezuela, Cuba, and Trinidad and Tobago. The remaining papers relate to the Antilles and Central America, as well as a series of papers that address region-wide topics such as plate tectonic evolution. A significant number of papers were contributed by authors from national oil companies and universities from within the region." --AAPG.
