bookdown Simon and Schuster Secret Path is a graphic novel by musician Gord Downie and illustrator Jeff Lemire that tells the story of Chanie “Charlie” Wenjack, a twelve-year-old boy who died in flight from the Cecilia Jeffrey Indian Residential School fifty years ago. Chanie, misnamed Charlie by his teachers, was a young boy who died on October 22, 1966, walking the railroad tracks, trying to escape from the Cecilia Jeffrey Indian Residential School to return home. Chanie’s home was 400 miles away. He didn’t know that. He didn’t know where it was, nor how to find it, but, like so many kids—more than anyone will be able to imagine—he tried. Chanie’s story is Canada’s story. We are not the country we thought we were. History will be re-written. We are all accountable. Secret Path acknowledges a dark part of Canada’s history—the long suppressed mistreatment of Indigenous children and families by the residential school system—with the hope of starting

our country on a road to reconciliation. Every year as we remember Chanie Wenjack, the hope for Secret Path is that it educates all Canadians young and old on this omitted part of our history, urging our entire nation to play an active role in the preservation of Indigenous lives and culture in Canada. The next hundred years are going to be painful as we come to know Chanie Wenjack and thousands like him—as we find out about ourselves, about all of us—but only when we do can we truly call ourselves, “Canada.” Proceeds from Secret Path will be donated to The Gord Downie Secret Path Fund for Truth and Reconciliation via The National Centre for Truth and Reconciliation (NCTR) at The University of Manitoba.

The New York Times bestselling author of *Being Mortal* and *Complications* reveals the surprising power of the ordinary checklist. We live in a world of great and increasing complexity, where even the most expert professionals struggle to master the tasks they face. Longer training, ever more advanced technologies—neither seems to prevent grievous errors. But in a hopeful turn, acclaimed surgeon and writer Atul Gawande finds a remedy in the humblest and simplest of techniques: the checklist. First introduced decades ago by the U.S. Air Force, checklists have enabled pilots to fly aircraft of mind-boggling sophistication. Now innovative checklists are being adopted in hospitals around the world, helping doctors and nurses respond to everything from flu epidemics to avalanches. Even in the immensely complex world of surgery, a simple ninety-second variant has cut the rate of fatalities by more than a third. In riveting stories, Gawande takes us from Austria, where an emergency checklist saved a drowning victim who had spent half an hour underwater, to Michigan, where a cleanliness checklist in intensive care units virtually eliminated a type of deadly hospital infection. He explains how checklists actually work to prompt striking and immediate improvements. And he follows the checklist revolution into fields well beyond medicine, from disaster response to investment banking, skyscraper construction, and businesses of all kinds. An intellectual adventure in which lives are lost and saved and one simple idea makes a tremendous difference, *The Checklist Manifesto* is essential reading for anyone working to get things right.

The purpose of this manual is to provide clear and helpful information for maintaining gravel roads. Very little technical help is available to small agencies that are responsible for managing these roads. Gravel road maintenance has traditionally been "more of an art than a science" and very few formal standards exist. This manual contains guidelines to help answer the questions that arise concerning gravel road maintenance such as: What is enough surface crown? What is too much? What causes corrugation? The information is as nontechnical as possible without sacrificing clear guidelines and instructions on how to do the job right.

Natural hazard induced disasters (NHID), such as floods, droughts, severe storms, and animal pests and diseases have significant, widespread and long lasting

impacts on agricultural sectors around the world. With climate change set to amplify many of these impacts, a “business as usual” approach to disaster risk management in agriculture cannot continue if we are to meet the challenges of agricultural productivity and sustainability growth, and sustainable development. Drawing from seven case studies - Chile, Italy, Japan, Namibia, New Zealand, Turkey and the United States - this joint OECD/FAO report argues for a new approach to building resilience to NHID in agriculture. It explores the policy measures, governance arrangements, on-farm strategies and other initiatives that countries are using to increase agricultural resilience to NHID, highlighting emerging good practices. It offers concrete recommendations on what more needs to be done to shift from coping with the impacts of disasters, to an ex ante approach that focuses on preventing and mitigating the impacts of disasters, helping the sector be better prepared to respond to disasters, and to adapt and transform in order to be better positioned for future disasters.

bookdown: Authoring Books and Technical Documents with R Markdown presents a much easier way to write books and technical publications than traditional tools such as LaTeX and Word. The bookdown package inherits the simplicity of syntax and flexibility for data analysis from R Markdown, and extends R Markdown for technical writing, so that you can make better use of document elements such as figures, tables, equations, theorems, citations,

and references. Similar to LaTeX, you can number and cross-reference these elements with bookdown. Your document can even include live examples so readers can interact with them while reading the book. The book can be rendered to multiple output formats, including LaTeX/PDF, HTML, EPUB, and Word, thus making it easy to put your documents online. The style and theme of these output formats can be customized. We used books and R primarily for examples in this book, but bookdown is not only for books or R.

Most features introduced in this book also apply to other types of publications: journal papers, reports, dissertations, course handouts, study notes, and even novels. You do not have to use R, either. Other choices of computing languages include Python, C, C++, SQL, Bash, Stan, JavaScript, and so on, although R is best supported. You can also leave out computing, for example, to write a fiction. This book itself is an example of publishing with bookdown and R Markdown, and its source is fully available on GitHub.
