Over the short term, how are changes in health care provisions affecting the health of the population, the cost of care, and access to care?. *Health Care Delivery in the United States*, now in a thoroughly updated and revised 9th edition, discusses these and other core issues in

the field. Under the editorship of Dr. Kovner and with the addition of Dr. James Knickman, Senior VP of Evaluation, Robert Wood Johnson Foundation, leading thinkers and practitioners in the field examine how medical knowledge creates new healthcare services. Emerging and recurrent issues from wide perspectives of health policy and public health are also discussed. Children represent a special challenge for emergency care providers, because they have unique medical needs in comparison to adults. For decades,

policy makers and providers have recognized the special needs of children, but the system has been slow to develop an adequate response to their needs. This is in part due to inadequacies within the broader emergency care system. *Emergency Care for Children* examines the challenges associated with the provision of emergency services to children and families and evaluates progress since the publication of the Institute of Medicine report *Emergency Medical Services for Children* (1993), the first comprehensive look at pediatric emergency care in the United States. This new book offers an analysis of:

- The role of pediatric emergency services as an integrated component of the overall health system.
- System-wide pediatric emergency care planning,

preparedness, coordination, and funding.

- Pediatric training in professional education.
- Research in pediatric emergency care.

Emergency Care for Children is one of three books in the *Future of Emergency Care* series. This book will be of particular interest to emergency health care providers, professional organizations, and policy makers looking to address the pediatric deficiencies within their emergency care systems.

The Future of the Public's Health in the 21st Century Asian Development Bank Public-private partnerships (PPPs) have shown their ability to meet some of the challenges in the health and education sectors both in India and overseas. The Asian Development Bank (ADB) has been assisting the Government of India since

2006 to develop PPPs across sectors in India, through a programmatic joint PPP Initiative, Mainstreaming PPPs in India. Under the initiative, a special task team of the ADB, together with the Government of India's Ministry of Finance and KPMG consultants undertook a rapid assessment study to develop possible PPP solutions for meeting the challenges of India's health and education sectors. Assessments of local PPP projects in the sector, consultations with state government officials in India, and best practice examples from the United Kingdom and other countries, have led to the development of this report. This report will therefore provide a quick guide to international and national PPP cases in the sectors as well as practical ideas and

suggested models to interested project sponsors, especially within government bodies responsible for sector development. Development of possible PPP projects based on some of the models and ideas suggested herewith will hopefully spur investment and efficiency gains in health and education infrastructure and service delivery mechanisms of the country.

This scholarly book focuses on stroke in Africa. Stroke is a leading cause of disability among adults of all ages, contributing significantly to health care costs related to long term implications, particularly if rehabilitation is sub-optimal. Given the burden of stroke in Africa, there is a need for a book that focuses on functioning African stroke survivors and the implications for

rehabilitation within the African context. In addition, there is a need to progress with contextualised, person-centred, evidence-based guidance for the rehabilitation of people with stroke in Africa, thereby enabling them to lead socially and economically meaningful lives. The research incorporated in the book used a range of primary and secondary methodological approaches (scoping reviews, systematic reviews, meta-analyses, descriptive studies, surveys, health economics, and clinical practice guideline methodology) to shed new insights into African-centred issues and strategies to optimise function post-stroke.

The World Health Organization defines the social determinants of health as "the conditions in which people are born, grow, work, live, and age, and the wider set of forces and systems shaping the conditions of daily life." These forces and systems include economic policies,

development agendas, cultural and social norms, social policies, and political systems. In an era of pronounced human migration, changing demographics, and growing financial gaps between rich and poor, a fundamental understanding of how the conditions and circumstances in which individuals and populations exist affect mental and physical health is imperative. Educating health professionals about the social determinants of health generates awareness among those professionals about the potential root causes of ill health and the importance of addressing them in and with communities, contributing to more effective strategies for improving health and health care for underserved individuals, communities, and populations. Recently, the National

Academies of Sciences, Engineering, and Medicine convened a workshop to develop a high-level framework for such health professional education. A Framework for Educating Health Professionals to Address the Social Determinants of Health also puts forth a conceptual model for the framework's use with the goal of helping stakeholder groups envision ways in which organizations, education, and communities can come together to address health inequalities.
