Now you can gain access to the most up-to-date changes in the 2009 International Residential Code with the newly revised sixth edition of Code Check: An Illustrated Guide to Building a Safe House. For builders, remodelers, home inspectors, and building inspectors, this essential reference delivers accurate information on current residential building codes for foundations, framing, plumbing, and wiring, as well as exterior and interior walls, fireplaces, and chimneys. By highlighting the central safety principles found in U.S. building codes - in a user-friendly format - this

valuable tool gives you all the facts you need to avoid common code violations. So you can get every job done right the first time - without expensive, time-consuming callbacks. *ANSI/AIHA Z9.3-2007 Spray Finishing Operations: Safety Code for Design, Construction, and Ventilation* Engineering Handbook "A member of the International Code Family." *HVAC Equations, Data, and Rules of Thumb, 2nd Ed.* American Society of Civil Engineers Minimum Design Loads for Buildings and Other Structures, ASCE/SEI 7-10, is a complete revision of ASCE Standard 7-05. ASCE 7-10 offers a complete update and reorganization of the wind load provisions, expanding them from one chapter into six to make them more understandable and easier to follow. ASCE 7-10 provides new ultimate event wind maps with corresponding reductions in load factors, so that the loads are not affected. It updates the seismic loads of ASCE 7-05, offering new risk-targeted seismic maps. The snow load, live load, and atmospheric icing

provisions of ASCE 7-05 are all updated as well. ASCE Standard 7-10 provides requirements for general structural design and includes means for determining dead, live, soil, flood, wind, snow, rain, atmospheric ice, and earthquake loads, and their combinations that are suitable for inclusion in building codes and other documents. A detailed commentary containing explanatory and supplementary information to assist users of ASCE 7-10 is included with each chapter: ASCE 7-10 is an integral part of the building codes of the United States. Structural engineers, architects, and those engaged in preparing and administering local building codes will find the structural load requirements essential to their practice.

The Third Edition of ANSI/ACCA Manual D is the Air Conditioning Contractors of America procedure for sizing residential duct systems. This procedure uses Manual J (ANSI/ACCA, Eighth Edition) heating and cooling loads to determine space air delivery requirements. This procedure matches duct system resistance (pressure drop) to blower performance (as defined by manufacturer's blower performance tables). This assures that appropriate airflow is delivered to all rooms and spaces; and that system airflow is compatible with the operating range of primary equipment. The capabilities and sensitivities of this procedure are compatible with single-zone systems, and multi-zone (air zoned) systems. The primary equipment can have a multi-speed blower (PSC motor), or a variable-

speed blower (ECM or constant torque motor, or a true variable speed motor). Edition Three, Version 2.50 of Manual D (D3) specifically identifies normative requirements, and specifically identifies related informative material.
