In the last years, Linked Data initiatives have encouraged the publication of large graph-structured datasets using the Resource Description Framework (RDF). Due to the constant growth of RDF data on the web, more flexible data management infrastructures must be able to efficiently and effectively exploit the vast amount of knowledge accessible on the web. This book presents flexible query processing strategies over RDF graphs on the web using the SPARQL query language. In this work, we show how query engines can change plans on-the-fly with adaptive techniques to cope with unpredictable conditions and to reduce execution time. Furthermore, this work investigates the application of crowdsourcing in query

processing, where engines are able to contact humans to enhance the quality of query answers. The theoretical and empirical results presented in this book indicate that flexible techniques allow for querying RDF data sources efficiently and effectively.

The Liar paradox arises when we consider a sentence that says of itself that it is not true. If such self-referential sentences exist? and examples like ?This sentence is not true? certainly suggest this?, then our logic and standard notion of truth allow to infer a contradiction: The Liar sentence is true and not true. What has gone wrong? Must we revise our notion of truth and our logic? Or can we dispel the common conviction that there are such self-referential sentences? The present study explores the second path.0After comparing the Liar reasoning in formal and informal logic and showing that there are no Gödelian Liar sentences, the study moves on from the semantics of self-reference to the metaphysics of expressions and proposes a novel solution to the Liar paradox: Meaningful expressions are distinct from their syntactic bases and exist only relative to contexts. Detailed semantico-metaphysical arguments show that in this dynamic setting, an object can be referred to only after it has started to exist. Hence the circular reference needed in the Liar paradox cannot occur, after all. As this solution is contextualist, it evades the expressibility problems of other proposals.

In the past few decades, scientists of human nature—including experimental and cognitive psychologists, neuroscientists, evolutionary theorists, and behavioral economists—have explored the way we arrive at moral judgments. They have called into question commonplaces about character and offered troubling explanations for various moral intuitions. Research like this may help explain what, in fact, we do and feel. But can it tell us what we ought to do or feel? In *Experiments in Ethics*, the philosopher Kwame Anthony Appiah explores how the new empirical moral psychology relates to the age-old project

of philosophical ethics. Some moral theorists hold that the realm of morality must be autonomous of the sciences; others maintain that science undermines the authority of moral reasons. Appiah elaborates a vision of naturalism that resists both temptations. He traces an intellectual genealogy of the burgeoning discipline of "experimental philosophy," provides a balanced, lucid account of the work being done in this controversial and increasingly influential field, and offers a fresh way of thinking about ethics in the classical tradition. Appiah urges that the relation between empirical research and morality, now so often antagonistic, should be seen in terms of dialogue, not contest. And he shows how experimental philosophy, far from being something new, is actually as old as philosophy itself. Beyond illuminating debates about the connection between psychology and ethics, intuition and theory, his book helps us to rethink the very nature of the philosophical enterprise.

This volume contains invited and accepted contributions presented at the Nineteenth International Conference on Membrane Computing (CMC19, <http://cmc19.uni-jena.de>) which took place in Dresden (Germany) from 4 to 7 September 2018, organised by the Friedrich Schiller University Jena (Germany) together with the Jena Centre for Bioinformatics (JCB) under the auspices of the International Membrane Computing Society (IMCS). We appreciate the hospitality of the NH Hotel and Conference Centre Dresden-Neustadt. Taking place for the second time in Germany and for the first time in Dresden, CMC19 is pleased to continue the fruitful tradition of 18 previous events of the International Workshop and Conference on Membrane Computing (WMC/CMC) enriched by some new ideas and inspirations emphasising multidisciplinary and innovative capacity and inspired by the idea of bringing together researchers working in membrane computing or related areas in a friendly atmosphere enhancing communication and cooperation.

**Dialogues and Conflicts Among Religious People** Univ of California Press  
A pithy work of philosophical anthropology

that explores why humans find moral orders in natural orders. Why have human beings, in many different cultures and epochs, looked to nature as a source of norms for human behavior? From ancient India and ancient Greece, medieval France and Enlightenment America, up to the latest controversies over gay marriage and cloning, natural orders have been enlisted to illustrate and buttress moral orders. Revolutionaries and reactionaries alike have appealed to nature to shore up their causes. No amount of philosophical argument or political critique deters the persistent and pervasive temptation to conflate the “is” of natural orders with the “ought” of moral orders. In this short, pithy work of philosophical anthropology, Lorraine Daston asks why we continually seek moral orders in natural orders, despite so much good counsel to the contrary. She outlines three specific forms of natural order in the Western philosophical tradition—specific natures, local natures, and universal natural laws—and describes how each of these three natural orders has been used to define and oppose a distinctive form of the unnatural. She argues that each of these forms of the unnatural triggers equally distinctive emotions: horror, terror, and wonder. Daston proposes that human reason practiced in human bodies should command the attention of philosophers, who have traditionally yearned for a transcendent reason, valid for all species, all epochs, even all planets.

Feuerwehrgerät Pro BUSINESS

This book recounts the events involving Raquel Liberman, an impoverished immigrant to Argentina that was forced by circumstances into prostitution, and the powerful Zwi Migdal, which controlled the recruitment and deployment of Jewish prostitutes in Argentina while maintaining mutually profitable relations with corrupt politicians and policemen. Liberman's story is presented as an example of individual courage and determination in the face of the violence and corruption of the prostitution business. Her struggle with the Zwi Migdal and triumphant public victory over her oppressors was widely publicized in newspapers and magazines, and was a political cause celebre in its time. This book gives readers an intimate view of how the affair caught the public imagination, and was interpreted and transformed by the artistic imagination.

This book includes a selection of thoroughly refereed papers accepted at the Satellite Events of the 17th Internal Semantic Web Conference, ISWC 2018,

held in Monterey, CA in October 2018. The key areas addressed by these events include the core Semantic Web technologies such as knowledge graphs and scalable knowledge base systems, ontology design and modelling, semantic deep learning and statistics. Furthermore, several novel applications of semantic technologies to the topics of Internet of Things (IoT), healthcare, social media and social good are discussed. Finally, important topics at the interface of the Semantic Web technologies and their human users are addressed, including visualization and interaction paradigms for Web Data as well as crowdsourcing applications.

Infinite Phenomenology Da Capo Press

The late 1960s saw an extraordinary growth in the American nuclear industry: dozens of plants of unprecedented size were ordered throughout the country. Yet at the same time, public concern about the natural environment and suspicion of both government and industry increased dramatically. Containing the Atom is the first scholarly history of nuclear power regulation during those tumultuous years. J. Samuel Walker focuses on the activities of the U.S. Atomic Energy Commission, the agency entrusted with the primary responsibility for the safety of nuclear power, and shows that from the beginning the AEC faced a paradox: it was charged with both promoting and controlling the nuclear power industry. Out of this paradox grew severe tensions, which Walker discusses in detail. His balanced evaluation of the issues and the positions taken by the AEC and others makes this study an invaluable resource for all those interested in the continuing controversies that surround nuclear energy. Welcome to the therapist in your pocket – full of anxiety-busting advice, read this book to learn how to live better and restore your confidence when panic attacks. Drawing on her own personal experiences with anxiety, therapist Anna Williamson offers easy to follow, expert guidance, alongside clinical psychologist, Dr Reetta Newell. Breaking Mad is packed with coping methods and solutions for those everyday moments where you need a helping hand. From recognising the first warning signs of anxiety, to coping with a panic attack or social anxiety, Anna and Reetta will be with you every step of the way, offering practical strategies and straightforward guidance whenever and wherever you might need it. Whether at home, on the bus, at college, just before a meeting, or even having a meltdown in the work toilet cubicle, Breaking Mad is here for you. So welcome to the club – it's time to tackle anxiety head on!

Dialogues and conflicts have become related topics. With all the resources, academic, financial and religious, interreligious dialogue is yet to achieve the expectations of peace among religious people. Searching through the works of many thinkers, from Plato, Rousseau, Buber and Bohm through de Chardin, von Balthasar, Rahner and Daniélou to Tracy, Jeanrond and Moyaert, this study discovers the missing link between interreligious dialogues and its practicability in the public, and proffers solutions.

Infinite Phenomenology builds on John Russon's earlier book, Reading Hegel's Phenomenology, to offer a second reading of Hegel's Phenomenology of Spirit. Here again, Russon writes in a lucid, engaging style and, through careful attention to the text and a subtle attunement to the existential questions that haunt human life, he demonstrates how powerfully Hegel's philosophy can speak to the basic questions of philosophy. In addition to original studies of all the major sections of the Phenomenology, Russon discusses complementary texts by Hegel, namely, the Philosophy of Spirit, the Philosophy of Right, and the Science of Logic. He concludes with an appendix that discusses the reception and appropriation of Hegel's Phenomenology in twentieth-century French philosophy. As with Russon's earlier work, Infinite Phenomenology will remain essential reading for those looking to engage Hegel's essential, yet difficult,

text.

Permissible Dose Taylor & Francis

This study examines how Cyprian of Carthage, the most significant bishop in the early Latin tradition, appropriates the canonical Paul. Cyprian, like Paul, is a pastoral theologian, so his pastoral concerns provide a helpful lens through which to study his use of the apostle. These include divine truth and eternal glory; the church's unity, ministry and sacraments; discipline and repentance; and wealth and welfare. Examining Cyprian's use of Paul in these areas allows us to move beyond a simple literal/allegorical paradigm to appreciate the wide range of reading strategies used by Cyprian: model, image, maxim, title, contextual exegesis, direct application, prophetic fulfilment and qualification. It also provides a different perspective on Paul than the one arrived at by privileging a handful of texts. This study of Cyprian's appropriation of Pauline texts therefore illuminates the interplay between text, context and theology in his exegesis. It also deepens our understanding of the early North African hermeneutical tradition and the early reception of Paul.

"Feuerwehren" (GUV-V C 53) schreibt für die Ausrüstung und die Geräte der Feuerwehr regelmäßige Prüfungen vor. In der BGG/GUV-G 9102:2009-12, auch kurz Geräteprüfverordnung genannt, sind diese Prüfungsgrundsätze detailliert festgelegt (z. B. Art, Zeitpunkt, Umfang und Durchführung). Das DIN-Taschenbuch 243 fasst die aktuellen technischen Regeln zusammen, die Sachkundige der Feuerwehren (z. B. Gerätewarte) für die Durchführung der regelmäßig wiederkehrenden Prüfungen benötigen. In den DIN- und DIN-EN-Normen geht es in erster Linie um Sicherheits- und Leistungsanforderungen sowie Prüfverfahren für Sprungrettungsgeräte // Doppelt wirkende hydraulische Rettungsgeräte // Rettungsplattformen // Hubrettungsfahrzeuge // Hebezeuge // Hebekissensysteme // Tragbare Leitern // Anschlagseile aus Stahldrahtseilen // Druck- und Saugschläuche // Feuerwehrleinen und -Haltegurte.

**The Bishop and the Apostle** CRC Press

As director of the Metallurgical Laboratory of the Manhattan Project at the University of Chicago, Arthur Holly Compton was a major participant in the research, production and testing of the first atomic bombs. In this memoir, he tells the story of the bomb's development from the presentation of the project to President Roosevelt, through its planning, research,

and building phases, to its use against Japan. From the perspective of the key position he held during World War II, Compton describes the project as a large-scale group effort leveraging the knowledge and talents of numerous scientists, industrialists and administrators all working as part of their nation's war effort. "An absorbing and eminently readable account... packed with new information, enlivened with precious detail and illuminating insights into the minds and personalities of the chief actors in the drama... Mr. Compton tells, and tells well, the story of how, with his unflagging encouragement, the brilliant team under the late Enrico Fermi brought about the first nuclear chain reaction... [an] important book." — Henry Guerlac, The New York Times Book Review "This book... is without doubt the most authoritative source available on many aspects of the atomic bomb project... Better than in most histories the real factors underlying one of mankind's most important developments are set forth in this work... The story is a personal one, which... gives the book a Churchillian authenticity... No historian will ever dare to neglect this volume in writing the history of World War II. It is beautifully written, carefully documented, and thoroughly interesting from cover to cover." — W.F. Libby, Science "For those who were in the project, it will mean many recollections. For those who were not, it should give an inkling of the character and capacity of many of the individuals, including Arthur Compton, who made success possible." — Lieutenant General Leslie R. Groves, U.S. Army (Retired) "Atomic Quest is an absorbingly interesting story of the people who blazed the trail into the atomic frontier... In a lifetime filled with brilliant accomplishments, Arthur Compton's four-year leadership in the quest for the atomic bomb was his grandest achievement... It is fortunate indeed that he returned to the fold long enough to set down in Atomic Quest a story that only he could tell." — Richard L. Doan, American Journal of Physics "Dr. Compton is a thinking man whose reflections range far beyond the confines of his scientific work: indeed, the distinctive quality of his book lies in his ability to reconcile the atomic bomb and similar operations with his belief as a practicing Christian." — John Barkham, Saturday Review Syndicate "It should be required reading for every American, for the free world... The narrative alone makes the book worth reading; its hopeful philosophy makes it mandatory reading." — Robert S. Kleckner, Chicago Sunday Tribune "As... director of the Metallurgical

Laboratory of the Manhattan Project, Dr. Compton has an important record to add to the annals of the beginning of the Atomic Age, for his was a personal and intimate connection with it." — Kirkus "A leading physicist's personal account of the wartime developments in atomic energy, culminating in the production of the atomic bomb." — Henry L. Roberts, Foreign Affairs "Informal, anecdotal, packed with behind-the-scenes incidents and impressions... arrestingly interesting." — George W. Gray, The Saturday Review "The most controversial part of the book is that which endeavors to foresee the future of a world faced with the threat of war with nuclear weapons and the inevitable widespread destruction that will accompany their use. Compton is convinced that war has actually thereby become obsolescent." — Robert Bruce Lindsay, Physics Today "This book... is written for the layman, in clear, everyday English... it answers the questions that have arisen in the minds of all intelligent people concerning the physical, moral, social and religious implications of the Atomic Age which was so brutally and vividly thrust upon the world in 1945." — Paul Jordan-Smith, Los Angeles Times Marketing Made Simple Routledge

Against Nature Northwestern University Press

What Happens When You Immerse Your Life in the Words of Jesus? "Jesus' words can replace stress with peace, sadness with joy, confusion with guidance, and fear with faith. That's why Jesus Speaks will not only change your day, but it can also change your life, your relationships, and your eternity!" —Christine Caine, best-selling author of Undaunted "I'm certain readers...will grow in their intimate relationship with the Father as they focus on Jesus' words daily through Mr. Scott's profound and encouraging writing." —Dr. Charles Stanley, senior pastor of First Baptist Church, Atlanta "I absolutely love Jesus Speaks! I am coming to love Jesus more and more as I gain a deeper understanding of who He is through what He says in His own words!" —Sandi Patty, Grammy Award-winning Christian artist "Jesus promised that if we abide in Him and His words abide in us, our prayers will be answered, and we will bear much fruit. Jesus Speaks provides an amazing springboard for any believer to abide in His words as never before." —Tommy Barnett, senior pastor of Phoenix First Assembly of God "True intimacy with Christ is achievable. Jesus Speaks can be your first step every morning into His presence." —Dr. Ed Young, senior pastor

of Second Baptist Church, Houston “Jesus Speaks is like reading a daily love letter from our Lord and Savior. Steve Scott has focused on the spoken words of Christ in one of the most powerful, clarifying ways possible.” —Chris Hodges, senior pastor of Church of the Highlands, Alabama “With Jesus Speaks you can immerse your mind, heart, and soul in His words every day!” —Josh D. McDowell, author and speaker “The words I have spoken to you—they are full of the Spirit and life.” —John 6:63 When Jesus walked this earth, He gave His followers more than one hundred life-changing promises. He also gave more

than one hundred teachings for living in line with God’s priorities—commands that lift us up rather than weigh us down! This 365-day devotional invites you to let Jesus speak directly into your life. Each reading begins with a red-lettered statement of Jesus, directly from Scripture, followed by a powerful reflection on how He wants us to apply His truths to our daily lives. No problem you face today is beyond the help of Jesus. No question you ask is beyond the answers of Jesus. The more you get to know this loving Savior, the more you will love Him! So come, immerse yourself in His words. He is speaking to you.

*Hitler: Legend, Myth & Reality* Oxford University Press

This book constitutes revised selected papers from the 19th International Conference on Membrane Computing (CMC19), CMC 2018, which was held in Dresden, Germany, in September 2018. The 15 papers presented in this volume were carefully reviewed and selected from 20 submissions. The contributions aim to abstract computing ideas and models from the structure and the functioning of living cells, as well as from the way the cells are organized in tissues or higher order structures.
