 Robotic engineering inspired by biology—biomimetics—has many potential applications: robot snakes can be used for rescue operations in disasters, snake-like endoscopes can be used in medical diagnosis, and artificial muscles can replace damaged muscles to recover the motor functions of human limbs. Conversely, the application of robotics technology to our understanding of biological systems and behaviors—biorobotic modeling and analysis—provides unique research opportunities: robotic manipulation technology with optical tweezers can be used to study the cell mechanics of human red blood cells, a surface electromyography sensing system can help us identify the relation between muscle forces and hand movements, and mathematical models of brain circuitry may help us understand how the cerebellum achieves movement control. Biologically Inspired Robotics contains cutting-edge material—considerably expanded and with additional analysis—from the 2009 IEEE

International Conference on Robotics and Biomimetics (ROBIO). These 16 chapters cover both biomimetics and biorobotic modeling/analysis, taking readers through an exploration of biologically inspired robot design and control, micro/nano bio-robotic systems, biological measurement and actuation, and applications of robotics technology to biological problems. Contributors examine a wide range of topics, including: A method for controlling the motion of a robotic snake The design of a bionic fitness cycle inspired by the jaguar The use of autonomous robotic fish to detect pollution A noninvasive brain-activity scanning method using a hybrid sensor A rehabilitation system for recovering motor function in human hands after injury Human-like robotic eye and head movements in human-machine interactions A state-of-the-art resource for graduate students and researchers.

Between August 1918 and March 1919 the Spanish influenza spread worldwide, claiming over 25 million lives - more people than perished in the fighting of the First World War. It proved fatal to at least a half-million Americans. Yet, the Spanish flu pandemic is largely forgotten

today. In this vivid narrative, Alfred W. Crosby recounts the course of the pandemic during the panic-stricken months of 1918 and 1919, measures its impact on American society, and probes the curious loss of national memory of this cataclysmic event. This 2003 edition includes a preface discussing the then recent outbreaks of diseases, including the Asian flu and the SARS epidemic. *Fears and Phobias* John Wiley & Sons

Pediatric Resuscitation is reviewed in this issue of *Pediatric Clinics of North America*, guest edited by Drs. Steve Schexnayder and Arno Zaritsky. Authorities in the field have come together to pen articles on Background and Epidemiology; CPR - Why the New Emphasis?; Airway Management; Arrhythmias, Cardioversion, and Defibrillation; Vascular Access and Medications; Medical Emergency Teams; Teamwork in Resuscitation; Resuscitation Education; Outcome Following Cardiac Arrest; Extracorporeal Life Support during CPR; Post-resuscitation Care; and Future Directions.

"A valuable cram course in how to survive the rest of your life." - James Howard Kunstler. Author of *The Long Emergency*, *Too Much Magic*, *The Geography of Nowhere*, and *The World Made By Hand* For billions of people, the ongoing economic crisis has marked the end of the world as we know it. The "American Dream" (and ones like it) of a guaranteed job, a home, and a pension, has given way to the nightmare of unemployment, unpayable debt, depression, and uncertainty. In *Survive The Economic Collapse*, Piero San Giorgio looks behind the headlines and sound bites and demonstrates that

today's economic crisis is no temporary "downturn," nor is it simply the result of bad policies. The crisis is the beginning of the end of a global paradigm when expectations of endless economic growth and progress crash up against the reality of scarcity and limited resources. The implications of the collapse cannot be ignored: a steep decline in living standards due to the evaporation of easy credit; a new political landscape that might inspire nationalism, geopolitical reshuffling, and wars over resources; and, potentially, a reduction in global population. No mere doom-sayer, San Giorgio explains not just how to understand the crisis but overcome it to foster a resilient community, stay healthy, and become self-sufficient and productive in the "interesting times" that lie ahead. Packed with tactical information and resources, *Survive* is nothing less than a field manual for the apocalypse. This edition has been thoroughly reedited and includes an extensive postscript detailing global developments in the past decade.

The abdominal wall has always been of interest to surgeon-anatomists. It was recognized as a barrier, and volumes have been written demonstrating how to breach this wall. Similarly, great importance has been placed on the methods of repairing the abdominal wall, whether that repair is necessitated by a primary operative wound, a congenital failure, an acquired defect, or the ubiquitous iatrogenic problem, the postoperative abdominal wall hernia. French surgeons have a long tradition of excellence in the field of human anatomy: the names of Pare, Bichat, Cloquet, and Fruchaud readily come to

mind. It is not surprising then, that this comprehensive text on the subject of the abdominal wall and its defects emanates from France. Although there are many interesting aspects to this presentation of abdominal wall problems, I find the review of prosthetic material and its use to be most unique. The synthetic meshes available today may well revolutionize our various approaches for repair of hernial defects. Considerable experience has evolved in the use of these prosthetic materials, particularly in the United Kingdom and Europe. I have been a proponent of prosthetic mesh for the cure of recurrent groin hernia during the past decade. According to the results reported in this book, the use of a prosthetic material in selected patients needing primary hernia repair seems indicated. I would be remiss if the organization GREPA were not highlighted.

This book explores the relationship between schizophrenia and common sense. It approaches this theme from a multidisciplinary perspective. Coverage features contributions from phenomenology, cognitive neuroscience, philosophy of mind, psychology, and social cognition. The contributors address the following questions: How relevant is the loss of common sense in schizophrenia? How can the study of schizophrenia contribute to the study of common sense? How to understand and explain this loss of common sense? They also consider: What is the relationship of practical reasoning and logical formal reasoning with schizophrenia? What is the relationship between the person with a diagnosis of schizophrenia and social values? Chapters examine such issues as rationality, emotions, self, and delusion. In addition, one looks at brain

structure and neurotransmission. Others explore phenomenological and Wittgensteinian theories. The book features papers from the Schizophrenia and Common Sense International Workshop, held at New University of Lisbon, November 2015. It offers new insights into this topic and will appeal to researchers, students, as well as interested general readers.

This text is an essential resource for any practitioner interested in how muscles work, whether from the point of view of training for sport, treating physical problems and diseases, or understanding the basic cellular physiology and how the function interrelates with other body systems. It provides outstanding material on skeletal muscle physiology and biochemistry. The book also offers the reader important knowledge on topics like embryonic development, muscle organization, energy metabolism, structure of the muscle fiber, and mechanisms of fatigue.

Essential guide to the new field of transfusion-free medicine and surgery - written by leading experts in the field. *Transfusion Free Medicine and Surgery* provides a comprehensive approach to a new paradigm shift in the field of blood management. The principles are easy and this platform provides an all-inclusive review of red blood cell production, oxygen delivery, coagulation and the role of blood transfusion in an

intensive care setting. Controversial as it may sound, this book opens the door for ethical/legal debates, by putting them into perspective and providing answers to perplexing situations. The economics of blood transfusion and the hidden costs that allude the clinician are also brought into the equation. **Why Buy This Book?** Provides the groundwork for developing a successful transfusion-free clinical program. Includes all key issues related to blood products, blood transfusion and transfusion-free medicine and surgery. Discusses controversial issues associated with this new and fast moving field. Includes self-assessment questions to help the reader with their continuing professional education and development. **Transfusion Free Medicine and Surgery** is ideal for: Specialists working in transfusion and transfusion-free medicine. Haematologists in practice and in training. Anyone involved in any surgical discipline, internal medicine, ICU care or anaesthesia who is interested in this field.

More than 180 participants and experts from 31 countries met for the fifth time in 10 years in St. Gallen, Switzerland for a 3-day conference to discuss important current issues of clinical cancer prevention. The meeting was again organized and co-sponsored by St. Gallen Oncology Conferences (SONK). While SONK has been extremely successful in organizing large international congresses on "Primary Therapy of Early Breast Cancer" as well as "Supportive Care in Cancer" for more than 20 years, the idea of promoting interdisciplinary, clinically oriented meetings on cancer prevention is a more recent and not yet generally accepted and welcomed concept in modern

oncology. Since today's medical expenses are soaring and medical research budgets are stagnating or even being cut, neither politicians nor industry is willing to risk an additional unpredictable channel of expenses, such as that demanded by clinical cancer prevention efforts! In Switzerland—and we fear in many other parts of the globe—some 97%–98% or even a greater percentage of health budgets is spent for curative and palliative/rehabilitative medicine. Since a meager 2%–3% of national health budgets is for preventive medicine, even less than that proportion is specifically allocated for cancer prevention. When the money for "curing and caring" for the diseased populace runs short, there is likely not much left for partly controversial disease prevention in the (still) healthy part of the population. *Pediatric Resuscitation* Ashgate Publishing, Ltd.

The UNESCO International Bioethics Committee is an international body that sets standards in the field of bioethics. This collection represents the contributions of the IBC to global bioethics. The IBC is a body of 36 independent experts that follows progress in the life sciences and its applications in order to ensure respect for human dignity and freedom. Currently, some of the topics of the IBC contributions have been discussed in the bioethics literature, mostly journal articles. However, this is a unique contribution by the scholars who developed these universal declarations and reports. The contributors have not only provided a scholarly up to date discussion of their research topics, but as members of the IBC they have also discussed specific practical challenges in the development of such international

documents. This book will be suited to academics within bioethics, health care policy and international law.

This text of critical care is updated and expanded to reflect the current, clinically relevant information. Conveniently compiled under one cover are the views of those authorities who have contributed to the science and art of caring for critically ill patients. It covers the molecular, cellular, physiologic, clinical, ethical and service-delivery aspects of critical care medicine. This revised edition includes a new section on renal/nephrology, as well as new chapters on heat stroke, hypothermia, transfusion therapy, trauma care of the elderly, mediators of multi-organ failure in sepsis, and gene therapy.

The first volume in the "What Do I Do Now?: Palliative Care" series, Pediatric Palliative Care uses a case-based palliative care approach to cover common and important topics in the examination, investigation, and management of children with serious illness. Each chapter provides a discussion of the diagnosis, key points to remember, and selected references for further reading. The book addresses a wide range of topics, including the goals of care, symptom management, care for neonatal and adolescent populations, and the emotional, social, cultural and spiritual needs of ill children and their families. Written by authors from a variety of fields such as nursing, chaplaincy, social work, and psychology, this book is suited for pediatricians, palliative care and hospice providers, nurses, and allied health practitioners. Pediatric Palliative Care is an engaging collection of thought-provoking cases

which clinicians can utilize when they encounter difficult patients. The volume is also a self-assessment tool that tests the reader's ability to answer the question, "What do I do now?"

Fears and Phobias reviews and synthesizes the different viewpoints of learning theory, psychoanalysis, ethology, and clinical psychiatry with regards to fears and phobias. The causes and treatment of phobias are examined, with due regard for relevant biological and psychological issues. Topics covered range from the etiology of fear to clinical syndromes such as agoraphobic syndrome, animal phobias, social phobias, illness phobias, and obsessive phobias. Comprised of four chapters, this book begins with an overview of the historical aspects of phobias and the components of phobias, followed by a discussion on the etiology of fear. Experimental studies on fear that focus on innateness, maturation, and learning are examined, together with genetic aspects of timidity; the kinds of situations that are feared; and the physiology and learning of fear. The next chapter deals with clinical syndromes and the classification of phobic disorders such as the agoraphobic syndrome, specific animal phobias, and social phobias, along with illness phobias, obsessive phobias, autonomic equivalents to phobic disorders, and children's fears and phobias. The final chapter is devoted to prevention and treatment of phobias, including desensitization, and psychiatric management of phobic patients. This monograph will be of interest to psychiatrists and psychologists.

"Filled with detailed, evocative examples, the volume offers both a comprehensive theoretical framework and practical therapeutic guidelines. It takes the reader step by step through assessing clients and combining play, developmental guidance, trauma-focused interventions, and concrete assistance with problems of living. Clear-cut yet flexible strategies are presented for helping parents resolve their own painful past experiences, gain insight into their child's developmental stage and unique psychological makeup, respond more effectively to his or her emotional needs, and create a safer family environment."--BOOK JACKET.

This 2004 Emergency War Surgery, 3rd United States Revision is written for the combat physician operating away from sophisticated medical support. This edition contains new material that updates the management of war wounds and is filled with over 150 specially drawn illustrations. Equally important is the use of an outline, bulleted format that is more concise than previous editions. The intent is that if given a choice of bringing a SINGLE book on a rapid or prolonged deployment, today's military surgeon would choose this edition over any other trauma book.

gathers together all the most recent world-wide knowledge in the various fields of research into the Epstein-Barr virus (EBV), from the most fundamental subjects (virology, molecular and cellular biology and immunology) through epidemiology, pathological anatomy, clinical research and therapeutics. Featured in the book are highly original chapters dealing with malignant lymphomas in AIDS patients, detection and prevention in developing countries, formulation of an anti-EBV vaccine. This comprehensive and clearly written book is a valuable and essential tool for all researchers and clinicians.

This book offers a theoretically driven, empirically grounded survey of the role visual communication plays in political culture, enabling a better understanding of the significance and impact visuals can have as tools of political communication. The advent of new media technologies have created new ways of producing, disseminating and consuming visual communication, the book hence explores the theoretical and methodological underpinnings of visual political communication in the digital age, and how visual communication is employed in a number of key settings. The book is intended as a specialist reading and teaching resource for courses on media, politics, citizenship, activism, social movements, public policy, and communication.

The Anaesthetic Crisis Manual Schocken

Over the past four decades, the prevalence of autism, asthma, ADHD, obesity, diabetes, and birth defects have grown substantially among children around the world. Not coincidentally, more than 80,000 new chemicals have been developed and released into the

global environment during this same period. Today the World Health Organization attributes 36% of all childhood deaths to environmental causes. Children's environmental health is a new and expanding discipline that studies the profound impact of chemical and environmental hazards on child health. Amid mounting evidence that children are exquisitely sensitive to their environment-and that exposure during their developmental "windows of susceptibility" can trigger cellular changes that lead to disease and disability in infancy, childhood, and across the life span-there is a compelling need for continued scientific study of the relationship between children's health and environment. The Textbook of Children's Environmental Health codifies the knowledge base and offers an authoritative and comprehensive guide to this important new field. Edited by two internationally recognized pioneers in the area, this volume presents up-to-

date information on the chemical, biological, physical, and societal hazards that confront children in today's world: pesticides, indoor and outdoor air pollution, lead, arsenic, phthalates, bisphenol A, brominated flame retardants, ionizing radiation, electromagnetic fields, and the built environment. It presents carefully documented data on rising rates of disease in children, offers a critical summary of new research linking pediatric disease with environmental exposures, and explores the cellular, molecular, and epigenetic mechanisms underlying diseases of environmental origin. With this volume's emphasis upon integrating theory and practice, readers will find practical approaches to channeling scientific findings into evidence-based strategies for preventing and identifying the environmental hazards that cause disease in children. It is a landmark work that will serve as the field's benchmark for years to come.
