A practical introduction to intelligent computer vision theory, design, implementation, and technology The past decade has witnessed epic growth in image processing and intelligent computer vision technology. Advancements in machine learning methods—especially among adaboost varieties and particle

filtering methods—have made machine learning in intelligent computer vision more accurate and reliable than ever before. The need for expert coverage of the state of the art in this burgeoning field has never been greater, and this book satisfies that need. Fully updated and extensively revised, this 2nd Edition of the popular guide provides designers, data analysts, researchers and advanced post-graduates with a fundamental yet wholly practical introduction to intelligent computer vision. The authors walk you through the basics of computer vision, past and present, and they explore the more subtle intricacies of intelligent computer vision, with an emphasis on intelligent measurement systems. Using many timely, real-world examples, they explain and vividly demonstrate the latest developments in image and video processing techniques and technologies for machine learning in computer vision systems, including: PRTTools5 software for MATLAB—especially the latest representation and generalization software toolbox for PRTTools5 Machine learning applications for computer vision, with detailed discussions of contemporary state estimation techniques vs older content of particle filter methods. The latest techniques for classification and supervised learning, with an emphasis on Neural Network, Genetic State Estimation and other particle filter and AI state estimation methods. All new coverage of the Adaboost and its implementation in PRTTools5. A valuable working resource for professionals and an excellent introduction for advanced-level students, this 2nd Edition features a wealth of illustrative examples, ranging from basic techniques to advanced intelligent computer vision system implementations. Additional examples and tutorials, as well as a question and solution forum, can be found on a companion website.

The use of language, especially for second/third languages or foreign languages, is inseparable from errors in either oral or written use. In analyzing these language errors, the approach used is contrastively and non-contrastively. This book covers what is meant by Error and Mistake, types of language learning errors such as Global and Local Error. In its taxonomies, errors observed in the acquisition of English as a second language as 1) Overgeneralization; 2) Ignorance of rule restriction; 3) Incomplete application of rules; and 4) False concepts hypothesized. Sources of errors are divided into 1) Interference transfer; 2) Intralingual transfer; 3) Context of learning; and 4) Communication strategies. In conducting error analysis, there are several procedures that can be used as a reference: 1) Collecting a sample of learner language, 2) identifying the errors, 3) describing the errors, and 4) explaining the errors. Analysis of these language errors, both oral and written, is needed because the results of the analysis will indicate the treatment that can be done for language learning.
