Public Policies and Food Systems in Latin America Open City Books Living Standards Measurement Study No. 113. This paper analyzes the extent to which workers in Bolivia face barriers to entry in the formal and informal sectors of the urban labor market. These barriers are most prevalent in the formal sector because of regulation. The higher wages found in the that sector are often regarded as evidence of labor market segmentation. However, wage differences between sectors may also result from compensating wage differentials, which follow from non-monetary

returns to the job such as health insurance, utility associated with the workplace, and job security. The author proposes a model that allows testing for labor market segmentation between the two sectors on the basis of cross-sectional data. The methodology incorporates data on ways in which individuals search for new jobs and information about discouraged workers who have stopped searching for jobs. The proposed model accounts for all of the specific features of urban labor markets in developing countries, in particular the existence of a competitive informal sector.

Bogotá imaginada Brazil Food problems are the order of the day. Solving the problems of hunger and malnutrition, producing and guaranteeing access to healthy food, preserving the environment, valuing local cultures and ensuring citizen participation are some of the many challenges that

permeate the dynamics of food systems. This book addresses the role of Latin American public policies and actions in the configuration of healthy and sustainable food systems. Written by scholars specialized in various disciplines (economy, sociology, policy science, etc.) and hailing from ten Latin American countries, it provides a historical overview of national food policies, examines recent policy changes and explores innovative urban and rural experiences at local level. The authors also discuss the challenges of developing specific policy objectives related to sustainable food systems. This book shows how referentials for public food policies have become more integrated in Latin America and takes a closer look at several promising local initiatives. However, it also highlights the many constraints in fostering sustainable food systems in the region, such as persistent competition among production models, land tenure inequalities and coordination issues among actors and state bodies. It will be of interest to a scientific audience of teachers and

food systems professionals, as well as any readers interested in policy dynamics in Latin America.

Conceptualism played a different role in Latin American art during the 1960s and 1970s than in Europe and the United States, where conceptualist artists predominantly sought to challenge the primacy of the art object and art institutions, as well as the commercialization of art. Latin American artists turned to conceptualism as a vehicle for radically questioning the very nature of art itself, as well as art's role in responding to societal needs and crises in conjunction with politics, poetry, and pedagogy. Because of this distinctive agenda, Latin American conceptualism must be viewed and understood in its own right, not as a derivative of Euroamerican models. In this book, one of Latin America's foremost conceptualist artists, Luis Camnitzer, offers a firsthand account of conceptualism in Latin American art. Placing the evolution of conceptualism within the history Latin America, he

explores conceptualism as a strategy, rather than a style, in Latin American culture. He shows how the roots of conceptualism reach back to the early nineteenth century in the work of Símon Rodríguez, Símon Bolívar's tutor. Camnitzer then follows conceptualism to the point where art crossed into politics, as with the Argentinian group Tucumán arde in 1968, and where politics crossed into art, as with the Tupamaro movement in Uruguay during the 1960s and early 1970s. Camnitzer concludes by investigating how, after 1970, conceptualist manifestations returned to the fold of more conventional art and describes some of the consequences that followed when art evolved from being a political tool to become what is known as "political art."

The economic significance of boron (B) in agriculture, horticulture, and forestry has been beyond dispute for several decades. Even in the last two decades, the areas where B deficiency limits plant production has grown with increased reports from China, south Asia and southeast Asia. The

present volume is reflective of the growing awareness of the significance of low soil B with reports from Australia, Bangladesh, Brazil, north, central and southern China, India, Nepal, and the North West Frontier Province of Pakistan contained herein. Boron deficiency also continues to be a problem for crop yield and quality in areas where B deficiency has been known for some time, for example in Germany and the USA. The problem of low soil B is not limited to effects on field crop yield, with papers reporting on depressed wood yield and quality in timber trees (Lambert et al.), and depressed fruit quality (Dong et al. ; Smith et al. : Zude et al.) also appearing in the present volume. Globally, Shorrocks (1997)¹ estimates that ?? tonnes of B fertiliser is applied annually in agriculture. The economic benefits from the use of B fertiliser have not been quantified but are clearly enormous. Paradoxically, the clear economic imperatives for using B fertiliser on low B soils are not matched by a similar clarity of understanding of the role and functions of B in plants.
