## EDWARD TESSA

The Complete Guide to Saving Seeds Harbour Publishing Winner of the American Horticultural Society Award for Excellence In Garden Book Publishing Winner of the Silver Medal for Best Reference from the Garden Writer's Association Filled with advice for the home gardener and the more seasoned horticulturist alike, The Seed Garden: The Art and Practice of Seed Saving provides straightforward instruction on collecting seed that is true-to-type and ready for sowing in next year's garden. In this comprehensive book, Seed Savers Exchange, one of the foremost American authorities on the subject, and the Organic Seed Alliance bring together decades of knowledge to demystify the time-honored tradition of saving the seed of more than seventy-five coveted vegetable and herb crops—from heirloom tomatoes and long-favored varieties of beans, lettuces, and cabbages to centuries-old varieties of peppers and grains. With clear instructions, lush photographs, and easy-to-comprehend profiles on individual vegetable crops, this book not only teaches us how to go about conserving these important varieties for future generations and for planting out in next year's garden, it also provides a deeper understanding of the importance of saving these genetically valuable varieties of vegetables that have evolved over the centuries through careful selection by farmers and home gardeners. Through simple lessons and master classes on crop selection, pollination, roguing, and the processes of harvesting and storing seeds, this book ensures that these time-honored traditions can continue. Many of these vegetable varieties are treasured for traits that are singular to their strain, whether that is a resistance to disease, an ability to grow well in a region for which that crop is not typically well suited, resistance to early bolting, or simply because it is a great-tasting variety. In an age of genetically modified crops and hybrid seed, a growing appreciation for saving seeds of these time-tested, open-pollinated cultivars has found a new audience from home vegetable gardeners and cooks to restaurant chefs and local farmers. Whether interested in simply saving seeds for home use or working to conserve rare varieties of beloved squashes and tomatoes, this book provides a deeper understanding of the art, the science, and the joy of saving seeds.

Food reliability matters more than ever. Joseph Lofthouse taught landrace gardening at conferences hosted by the Rocky Mountain Seed Alliance, National Heirloom Expo, Organic Seed Alliance, Northeast Organic Farming Association (NOFA-NY), and Utah Farm & Food Conference. He serves as World Tomato Society ambassador. "Landrace Gardening is brilliant. It's a love story! And 2 parts gardening handbook. There are so many revelations I don't know where to begin? AMAZING. In every way this is a book for the ages. Bravo Joseph." Dan Barber, Blue Hill At Stone Barns, and Row 7 Seed Company. "There is magic in the way Joseph Lofthouse marries his no-stress approach to gardening with such deep love and passion. This book is as much a gardening manual as it is a re-framing of our relationship with each other and the world. Landrace Gardening gives us a roadmap to the kind of joyful food security that we need for healing many of the most important wounds of our time." Jason Padvorac"Joseph Lofthouse has a focus upon something that all gardeners should know: Landrace varieties are the way to sustainability. The best part is that everything in his book is adaptable for any gardener. No high level knowledge of botany or chemistry is required. The versatility and diversity of growing landrace plants speaks for themselves." Jere Gettle- Baker Creek Heirloom Seed Company. "The western sustainable agriculture movement has long needed its own version of the 'One Straw Revolution'. Joseph Lofthouse provides just that. With revolutionary gusto based on heretical thought and age old human gnosis. In Landrace Gardening, Food Security... Lofthouse steps firmly into the role of Iconoclast and elder seed shaman." Alan Bishop, Alchemist at Spirits Of French Lick

There is no despair in a seed. There's only life, waiting for the right conditions-sun and water, warmth and soil-to be set free. Everyday, millions upon millions of seeds lift their two green wings. At no time in our history have Americans been more obsessed with food. Options- including those for local, sustainable, and organic food-seem limitless. And yet, our food supply is profoundly at risk. Farmers and gardeners a century ago had five times the possibilities of what to plant than farmers and gardeners do today; we are losing untold numbers of plant varieties to genetically modified industrial monocultures. In her latest work of literary nonfiction, award-winning author and activist Janisse Ray argues that if we are to secure the future of food, we first must understand where it all begins: the seed. *The Seed Underground* is a journey to the frontier of seed-saving. It is driven by stories, both the author's own and those from people who are waging a lush and quiet revolution in thousands of gardens across America to preserve our traditional cornucopia of food by simply growing old varieties and eating them. *The Seed Underground* pays tribute to time-honored and threatened varieties, deconstructs the politics and genetics of seeds, and reveals the astonishing characters who grow, study, and save them.

Much of our food comes from seeds. But where do our seeds come from? And where are they going? For much of human history, farmers saved their own seed stocks to ensure a good harvest from year to year. In the mid-twentieth century, governments became involved in seed saving, creating massive seed libraries cataloguing thousands of varieties. This biodiversity has come under attack in recent decades, as corporations have replaced heirloom varieties with genetic engineering and costly trademarks. In such an agricultural climate, saving seeds becomes both a practical act of preservation and powerful act of protest. Over half of Canadian households grow fruits, herbs, vegetables or flowers for personal use, according to Statistics Canada. And each of these home gardens has the potential to preserve vital biodiversity, if only we would let plants go to seed, harvest and preserve them. *Saving Seeds* is a clear and winsome introduction to the essentials of seed saving, from seed selection criteria to harvest and storage tips. It also addresses the role of seed-saving communities: local swaps, seed companies, friends and neighbours and even how the Internet can support this time-honoured practice. In an era of community gardens, farmers markets and renewed interest in heirloom species, *Saving Seeds* is a timely call to ensure a more secure future for our seeds and ourselves.

"These seeds will captivate you whether you're a gardener or not." - The Washington Post "A sumptuous guide to 600 of the world's weirdest and most beautiful species, from the black seed with hair like Donald Trump to pinhead-sized orchid seeds." - The Guardian "The book drives home the incredible botanical wealth that is found on our precious blue planet." - The English Garden True time capsules of life, seeds are significant items of hope and promise. They are the most complex organs plants ever produce, and come in an enormously diverse range of shapes, sizes, and colours; from the impressive coco de mer nut to the microscopic seeds of an orchid, to the extraordinary cobalt blue of the traveller's palm pit. Seeds are often overshadowed by the adult plant's size and show. Here, 600 seeds are spotlighted, each given equal attention, each shown as glorious photographs, life size and in detail, alongside an engraving of the parent plant. Every profile includes a population distribution map, a table of essential information, and a commentary revealing notable characteristics, related species, and a diagnosis of the specimen's importance in terms of taxonomy, rarity, dispersal method, and scientific significance. Arranged taxonomically, this essential reference reveals the variety and importance of seeds to an extent never seen before.
