Les ostéotomies sont l'une des interventions les plus anciennes de la chirurgie orthopédique et le genou y occupe une place significative. L'arthrose du genou, ou gonarthrose, est une pathologie dégénérative très fréquente puisqu'elle touche 65 % des plus de 65 ans ainsi qu'une petite partie de la population plus jeune pratiquant des activités sportives ou des travaux sollicitant fortement les genoux. Ces pathologies, lorsqu'elles sont imputables à

des déformations extra- ou intra-articulaires, peuvent être traitées par les ostéotomies, tibiales et fémorales, solutions chirurgicales fiables qui préservent l'articulation, permettent une reprise de l'activité sportive ou professionnelle et retardent/évitent la mise en place d'une prothèse. Les ostéotomies autour du genou fait un état des lieux exhaustif et actuel de ces techniques. Cet ouvrage traite dans un premier temps des aspects théoriques de ces interventions, puis détaille, pour chaque type de pathologie, les aspects pratiques (méthodes classiques et novatrices, utilisation de guides de coupe sur mesure, etc.) et les modalités techniques. Les coordonnateurs se sont entourés d'une équipe de chirurgiens référents internationale ayant une expertise reconnue dans la réalisation d'ostéotomies autour du genou. Cet ouvrage constitue ainsi la référence indispensable pour tous les chirurgiens orthopédistes voulant acquérir les notions de bases et approfondir la maîtrise de ces techniques.

Built as both a fighter-interceptor and fighter-bomber, the F-86 Sabre (sometimes called the Sabrejet) was one of the most widely-produced fighters of the Cold War. In December of 1950, three squadrons of Sabres were rushed into combat in Korea, where they dueled North Korean, Chinese and Russian pilots flying the MiG-15. By the time the war was over, F-86 pilots achieved a stunning victory ratio - destroying nearly 800 enemy aircraft with a loss of only 76 Sabres. The nimble jet also saw combat in the Taiwan Strait Crisis and the Indo-Pakistan Wars of 1965 and 1971. Originally printed by North American and the U.S. Air Force, this F-86 Flight Operating Manual taught pilots everything they needed to know before entering the cockpit. Classified "Restricted," the manual was recently declassified and is here reprinted in book form. This facsimile has been reformatted and color images appear in black and white. Care has been taken to preserve the integrity of the text.

As part of the Metalworking Process and Equipment Program, a survey was conducted to collect and summarize information on deformation characteristics of metals and their effect on processing operations. This report presents information obtained from reports on Government-sponsored work and from articles in technical publications. The report covers eight subjects: extrusion, forging, rolling, thermal mechanical variables affecting the properties of refractory metals and alloys, development of preferred orientations, anisotropy of strength and ductility, high-strain-rate deformation, and strain aging. In order to be useful to engineering students and production engineers the topics are treated in two ways. Generalized discussions of common processes point out why specific variables must be

modified in order to deform certain types of metals satisfactorily. When practical, data on the more-difficult-to-form metals are used to illustrate the principles, limitations, and effects of the processes. The objective is to help the non-specialist recognize the implications of specific findings and to apply them to specific operations. (Author).

Other systems, not commonly used in California are also discussed. Inside you'll find discussion of management considerations such as when to irrigate, how much water to apply, and how to monitor soil moisture. You'll also find an overview of uniformity and efficiency, sprinkle lateral design considerations,

calculating pressure losses along laterals, factors affecting uniformity, effect of pressure spacing, and wind on catch can uniformity, as well as evaluating and improving sprinkle irrigation systems. A chapter on energy considerations covers pump selection, factors that affect pumping plant performance, pump performance tests, variable speed drives for pumping plants, and measures to consider to reduce energy use. Handy tables clearly illustrate key concepts to help you with decision making and trouble-shooting. Contains 46 illustrations and 28 tables, as well as 8 appendices of selected cover-crop coefficient relationships.
