Building a masterpiece explores some of the untold chapters in the long history of the Opera House's gestation, development and completion -- of individuals whose careers were made or broken by the Opera House, the companies whose reputations were secured through their association with the building, and the pioneering construction methods, innovative technologies and methodologies developed to meet the demands of its unprecedented design and challenging construction. The workers who built the building, the politicians, architects and members of the public who championed it and its often beleaguered architect are discussed as is its current world status as a symbol of Australia.To coincide with the 40th anniversary of the opening of the Sydney Opera House, this new edition of Building a Masterpiece will include a new chapter on another little known and much misunderstood story: the architect who took over from Utzon and completed the project.

The author designed, built and, with his partner Faith, lives in a simple, turf-covered, wood and cobwood, low impact roundhouse. He wrote a book Building a Low Impact Roundhouse (Permanent Publications) to describe the process. In the fifteen years that have elapsed since the roundhouse becoming known about, Tony has been asked several times to run and supervise courses in which participants build a simple roundhouse over two to four weeks. In this book he uses the experience of those courses and other builds to produce a thorough 'How To' manual covering Site, Design and Planning, Drainage and Stem Wall, the Henge, the Reciprocal Frame roof, Walls, and Roof covering. From the words, diagrams and over one hundred colour photographs here, you will be able to design and build your own simple roundhouse. Preferably in a group, because that is more fun. The tips in this book will enable you to build a simple roundhouse very cheaply and quickly. This manual should be a part of your toolkit.
