At the Mountains of Madness is a novella by American author H. P. Lovecraft, written in February/March 1931 and rejected that year by Weird Tales editor Farnsworth Wright on the grounds of its length. It was originally serialized in the February, March, and April 1936 issues of Astounding Stories. It has been

reproduced in numerous collections. The story details the events of a disastrous expedition to the Antarctic continent in September 1930, and what was found there by a group of explorers led by the narrator, Dr. William Dyer of Miskatonic University. Throughout the story, Dyer details a series of previously untold events in the hope of deterring another group of explorers who wish to return to the continent.

[Berge des Wahnsinns \(At the mountains of madness, dt.\)](#) Independently Published
 Originally composed in 1931, H.P. Lovecraft's novella *At the Mountains of Madness* (1936) is one of his most famous and successful stories, with numerous overt connections to his other works. The story is narrated by Professor William Dyer, a geologist with Miskatonic University. He begins by explaining that he does not wish to tell his story, but is compelled to because men of science will not heed his warnings without explanations. Dyer led a team sponsored by the university that intended to use an advanced new drilling technology to extract samples from Antarctica. Dyer's

team included Frank Pabodie, the inventor of the drill, as well as Lake and Atwood, fellow professors from the university, and assistants. Dyer makes it clear he is attempting to dissuade a planned second mission from following in their footsteps. Dyer details their initial work taking bore samples. Some of the samples seem to have triangular-shaped prints in them, but the team dismisses these as distortions. As the team moves over the South Pole, it sees a previously unknown range of mountains. Lake announces that he will take a team to explore this new feature, despite Dyer's misgivings. Lake and his team fly off in one of the expedition's airplanes, which crashes near the mountains. Lake and his team survive and set up a camp at the site. The team begins core sampling near the crash site and discovers an underground cavern. They cautiously enter the cavern and discover that it is filled with bones and shells--a huge amount of animal remains of all kinds. At first, the team is disturbed, but Dyer explains this by theorizing that the bones were carried into the cavern via runoff during ice melts, which satisfies the others. Further exploration reveals more

than a dozen fossilized artifacts, described as "barrel-shaped." These fossils are in nearly perfect condition despite having clearly been in the cavern for a very long time. The team transports some of these fossils to the surface to have their first clear look at the creatures. Their bodies are barrel-shaped, with tentacle-like arms, star-shaped heads--and triangular feet that match the prints seen in earlier core samples.

At the Mountains of Madness Festa Howard Phillips Lovecraft was an American writer of weird fiction and horror fiction, who is known for his creation of what became the Cthulhu Mythos. Born in Providence, Rhode Island, Lovecraft spent most of his life in New England. I am forced into speech because men of science have refused to follow my advice without knowing why. It is altogether against my will that I tell my reasons for opposing this contemplated invasion of the antarctic - with its vast fossil hunt and its wholesale boring and melting of the ancient ice caps. And I am the more reluctant because my warning may be in vain. Doubt of the real facts, as I must reveal them, is inevitable; yet, if I

suppressed what will seem extravagant and incredible, there would be nothing left. The hitherto withheld photographs, both ordinary and aerial, will count in my favor, for they are damnably vivid and graphic. Still, they will be doubted because of the great lengths to which clever fakery can be carried.

At the Mountains of Madness

Mantikore-Verlag

At the Mountains of Madness is a science fiction-horror novella by American author H. P. Lovecraft. An expedition to Antarctica goes horribly wrong as a group of explorers stumbles upon some mysterious ancient ruins, with devastating consequences. *At the Mountains of Madness* ranks among Lovecraft's most terrifying novellas, and is a firm favourite among fans of classic horror.

At the Mountains of Madness an Illustrated Modern Library

On an expedition to Antarctica, Professor William Dyer and his colleagues discover the remains of ancient half-vegetable, half-animal life-forms. The extremely early date in the geological strata is surprising because of the highly-evolved features found in these previously unknown life-forms. Through a series of dark revelations, violent episodes, and misunderstandings, the group learns of Earth's secret history and legacy.

At the Mountains of Madness: Large Print

At the Mountains of Madness is a novella by horror writer H. P. Lovecraft, written in February/March 1931 and rejected that year by *Weird Tales* editor Farnsworth Wright on the grounds of its length.[1] It was originally serialized in the February, March and April 1936 issues of *Astounding Stories*. It has been reproduced in numerous collections. The story details the events of a disastrous expedition to the Antarctic continent in September of 1930 and what was found there by a group of explorers led by the narrator, Dr. William Dyer of Miskatonic University. Throughout the story, Dyer details a series of

previously untold events in the hope of deterring another group of explorers who wish to return to the continent. The novella's title is derived from a line in "The Hashish Man," a short story by fantasy writer Edward Plunkett, Lord Dunsany: "And we came at last to those ivory hills that are named the Mountains of Madness..

At the Mountains of Madness and Other Novels

Arkham, 1933. Professor Dyer, a prominent geologist, learns that a scientific expedition will soon leave for Antarctica following in the footsteps of the journey which he himself had made in 1931. In the hope of dissuading the attempt, Dyer decides to make a full account of the tragic events he had survived, this time without omitting the passages which he had kept silent about on his return, for fear of being taken for a madman. Two years earlier, ships chartered by Miskatonic University had landed on the frozen continent at the start of the Antarctic summer, and the group of four professors and sixteen students set to work immediately. The expedition biologist, Professor Lake, left with several members of the team to follow a promising fossil track. After just a few days, he announced by radio that he had discovered astonishing specimens of an unknown ancient species, before stopping all communication after a terrible storm. Guessing the worst, Dyer went to their

rescue the next day. What he discovered went beyond his wildest fears ... In the illustrated AT THE MOUNTAINS OF MADNESS VOL.1, artist, Francois Baranger, acclaimed for his work as a concept designer for cinema and video games, has performed the incredible task of reimagining one of H.P. Lovecraft's most classic and horrific tales into visual art. Landscapes of frozen wastes, unspeakable creatures millions of years old found in an abnormal state of conservation, strange geometric structures at the top of black mountains. Words cannot do the visuals justice. It is a book with images to pour over.

Berge des Wahnsinns

At the Mountains of Madness, novella by H. P. Lovecraft, written in 1931, rejected for magazine publication in Weird Tales (not least because of its length) and then serially published in Astounding Stories in 1936. H. P. Lovecraft's most effective novel begins as a tale of exploration at the cutting edge of science. Airplanes and drilling devices are shipped to Antarctica in 1930, just as the mapping of the continent begins in earnest. But this "awful place," more ancient than any other

continent, is not so easily opened up to materialist exploitation. Soon enough, an entirely new history of the world is in evidence, one that undermines all previously held views of science and nature, a vision that contains vast alien cities buried beneath the ice and the awesome and awful survivors of its heyday. The positive and efficient first-person narrative of the geologist, Dr. William Dyer, patiently and didactically explains the wonders of new technology. Only when the first survey group, isolated by a storm, begins to radio back of highly unusual finds in a cavern beneath the surface, do events begin to unravel. From then on, Dyer and his companion, the student Danforth, are on a downward spiral of discovery that attacks every notion of time, space, and life, until Danforth's speech is reduced to disconnected fragments, recalled only in dreams. Deeply influenced by Poe, Lovecraft's horror tends to be implied and offstage, but this effectively deepens the abounding philosophical horror felt by the protagonists. This intriguing blend of gothic horror and lost-world scenarios within a more modern genre framework

can be rediscovered in many contemporary narratives, especially film. Lovecraft achieved little success in his lifetime but his work resonates with themes that consistently inspire later generations of writers, science fiction as much as horror. Largely due to his Cthulhu stories, called Cthulhu Mythos by August Derleth, Lovecraft is today the subject of a large cult following.
