Introduces the signs of the Zodiac, explains how to interpret one's horoscope, and describes how to examine one's entire life

*Teaching for Change CRC Press*

The present volume provides a fascinating overview of geometrical ideas and perceptions from the earliest cultures to the mathematical and artistic concepts of the 20th century. It is the English translation of the 3rd edition of the well-received German book "5000 Jahre Geometrie," in which geometry is presented as a chain of developments in cultural history and their interaction with architecture, the visual arts, philosophy, science and engineering. Geometry originated in the ancient cultures along the Indus and Nile Rivers and in Mesopotamia, experiencing its first "Golden Age" in Ancient Greece. Inspired by the Greek mathematics, a new germ of geometry blossomed in the Islamic civilizations. Through the Oriental influence on Spain, this knowledge later spread to Western Europe. Here, as part of the medieval Quadrivium, the understanding of geometry was deepened, leading to a revival during the Renaissance. Together with parallel achievements in India, China, Japan and the ancient American cultures, the European approaches formed the ideas and branches of geometry we know in the modern age: coordinate methods, analytical geometry, descriptive and projective geometry in the 17th and 18th centuries, axiom systems, geometry as a theory with multiple structures and geometry in computer sciences in the 19th and 20th centuries. Each chapter of the book starts with a table of key historical and cultural dates and ends with a

summary of essential contents of geometry in the respective era. Compelling examples invite the reader to further explore the problems of geometry in ancient and modern times. The book will appeal to mathematicians interested in Geometry and to all readers with an interest in cultural history. From letters to the authors for the German language edition I hope it gets a translation, as there is no comparable work. Prof. J. Grattan-Guinness (Middlesex University London) "Five Thousand Years of Geometry" - I think it is the most handsome book I have ever seen from Springer and the inclusion of so many color plates really improves its appearance dramatically! Prof. J.W. Dauben (City University of New York) An excellent book in every respect. The authors have successfully combined the history of geometry with the general development of culture and history. ... The graphic design is also excellent. Prof. Z. Nádenik (Czech Technical University in Prague)

Asphalt modification is an important area in the development of new road and pavement materials.

There is an urgent demand for road materials that can minimize fracture at low temperatures and increase resistance to deformation at high temperatures. The function of asphalt is to bind aggregate to protect it from water and other harmful agents. In the beginning asphalt was ideal for this purpose, but recently traffic loads have increased and environmental factors have deteriorated more rapidly than before. Asphalt is a byproduct of crude oil in the refining process, and it is considered a complex heterogeneous mixture of hydrocarbons. Asphalt modification has become an important research area, using several methods and new materials as modifiers.

The year 2012 marks the 50th anniversary of the publication of Thomas S. Kuhn's *The Structure of Scientific Revolutions*. Up until recently, the book's philosophical reception has been shaped, for the most part, by the debates and the climate in philosophy of science in the 1960s and 1970s; this new collection of essays takes a renewed look at this work. This volume concentrates on particular issues addressed or raised in light of recent scholarship and without the pressure of the immediate concerns scholars had at the time of the *Structure's* publication. There has been extensive research on all of the major issues concerning the development of science which are discussed in *Structure*, work in which the scholars contributing to this volume have all been actively involved. In recent years they have pursued novel research on a number of topics relevant to *Structure's* concerns, such as the nature and function of concepts, the complexity of logical positivism and its legacy, the relation of history to philosophy of science, the character of scientific progress and rationality, and scientific realism, all of which are brought together and given new light in this text. In this way, our book makes new connections and undertakes new approaches in an effort to understand the *Structure's* significance in the canon of philosophy of science.

Utilizing an original and profound system that converts traditional sun-sign astrology into a more precise language for decoding the complete range of human experience, *A New Vision of Astrology* contains bold new concepts that reframe astrology as we know it: A horoscope begins at conception rather than birth, incorporating gestation -- the most formative period of life. The sun, moon, and planets correlate with people in your life -- everyone from parents and siblings to friends and lovers. Horoscopes are not unalterable blueprints formed at the moment of birth but are constantly changing as planets trigger key events. These events can be predicted using a wheel of life -- a simple diagram that reveals every significant occurrence in your life span. SPECIAL BONUS! The author's website, [www.newvisionastrology.com](http://www.newvisionastrology.com), also offers each reader a FREE, PERSONALIZED horoscope chart -- the crucial first step on an extraordinary journey of self-exploration. Radical and thought provoking, *A New Vision of Astrology* provides a unique vantage point that will help you harness the power of astrology to shape your life for the better.

*In His Name* Daniel Pipes

The Cosmic Serpent was a giant comet that terrorized mankind in prehistoric times. As a fiery

dragon and hurler of thunderbolts, it wrought destruction and disaster upon the Earth. In the last three thousand years, however, these stupendous facts have been all but erased from human memory; not on purpose but simply because we have never arrived at a proper understanding of comets. Now, in this scholarly and entertaining enquiry, the authors bring to bear a battery of modern knowledge gathered by radio-telescopes, satellites, moonshots and the like; and step by step, they unveil for us a remarkable new vision of man's dramatic past and hazardous future.

Among glass craftsman active in the 1st century A.D., the most famous and gifted was Ennion, who hailed from the coastal city of Sidon in modern Lebanon. Ennion's glass stood out for its quality and popularity. His products are distinguished by the fine detail and precision of their relief decoration, which imitates designs found on contemporaneous silverware. This compact, but thorough volume examines the most innovative and elegant known examples of Roman mold-blown glass, providing a uniquely comprehensive, up-to-date study of these exceptional works. Included are some twenty-six remarkably preserved examples of drinking cups, bowls, and jugs signed by Ennion himself, as well as fifteen additional vessels that were clearly influenced by him. The informative texts and illustrations effectively convey the lasting aesthetic appeal of Ennion's vessels, and offer an accessible introduction to an ancient art form that reached its apogee in the early decades of the Roman Empire.

*Blood Bond* Birkhäuser

De islamiske religiøse idealer medførte, at muslimerne ikke gerne engagerede sig i krig eller regeringsanliggender, hvorfor de gennem tiderne systematisk skaffede sig udenlandske slaver, som blev uddannet og anvendt som professionelle soldater, første gang omkring 815-820, f.eks. er det berømte tyrkiske janitscharkorps, der bestod af osmanniske elitesoldater, skabt i det sene 1300 tal af kristne krigsfanger.

These 28 essays recount popular education's history and its multiple uses in the labor movement today: to organize the unorganized, to develop new leaders and activists, and to strengthen labor and community alliances. They explore its other facets: theater and culture, economics education, workplace safety and health, and classroom use and address experiences from Canada and the United States (US)-Mexico border. The essays are "Popular Education" (Bernard); "Popular Education, Labor, and Social Change" (Hurst); "Highlander and Labor" (Williams, Sessions); "Organizing Public

Sector Workers in Puerto Rico" (Delp, Outman-Kramer); "Stamford, Connecticut, Case Study" (McAlevey); "Paolo Freire Hits L.A.'s Mean Streets" (Bacon); "Year 2000 Justice for Janitors Campaign" (Arellano); "Las Vegas Hotel Workers Find a Voice" (Lee, Baker); "Empowering the Members' Voice" (Del Valle); "Economic Justice in the Los Angeles Figueroa Corridor" (Haas); "Fighting for a Living Wage in Santa Monica" (Rothstein); "Just Transition Alliance" (View); "Power of Voices" (Williams); "Battle in Seattle" (Brown); "On Theater and the Labor Movement" (Delp, Outman-Kramer); "Forum Theater" (Delp); "Theater for Worker Health and Safety" (Dooley); "Experiences with Popular Economic Education" (Teninty); "Justice for Avondale Workers" (Washington); "Building a Worker Health and Safety Movement" (Delp); "Workplace Learning, Literacy, and English for Speakers of Other Languages" (Chenven); "English Classes at the Union Hall" (Utech); "Labor in the Schools" (Tubach); "Labor Deserves Credit" (Schurman); "Case Method in Labor Leadership Education" (Bernard); "Confronting Trade Policies from the Bottom Up" (Delp, De Lara); and "Worker-Educators and Union Transformation" (Thomas, Martin). A resources list consists of 18 United States, 5 Canadian, 2 Latin American, and 1 Asian organizations and 2 international networks. (YLB).

*The Final Conclave* Trafford Publishing

The proceedings of the 1998 Société Européenne pour l'Astronomie dans la Culture conference held in Dublin with 15 papers, all in English, covering various periods and parts of the world; Palaeolithic Europe, Minoan and Mycenaean Crete, pre-Hispanic Canary Islands, Greece and Rome and the Americas. Although the overall theme of the conference was landscape perception, many papers also addressed related issues of cosmology, symbolism, belief systems, mythology, studies of constellations, folklore and related ritual practices.
