What function is played by concepts related to meaning and mereology in the cognitive sciences? How can one outline adequate simulation models for the continuous emergence of new categorization forms characterizing cognitive processes? To what extent is it possible to define new measures of meaningful complexity? How is it possible to describe synergetically the symbolic dynamics inherent in cognitive

processes? What types of formal models should we use to describe the evolutionary aspects of cognition?

These, the most difficult questions in cognitive science, are discussed here in 15 original essays written by distinguished scholars drawn from a variety of disciplines. The first part presents an up-to-date account of some current trends in the functional modeling of cognitive activities, the synergetic models in particular are widely discussed. The second part focuses on recent advances in complexity theory, self-organizing networks, the theory of self-reference, and the theory of self-organization. The third part focuses on some methods of formal analysis that can be used to delineate consistent simulation models of cognitive activities at the perceptual, linguistic and computational levels. The volume also highlights traditional philosophical concerns about realism, the cognitivism-connectionism debate, and the role of holistic assumptions. Readership: psychologists, cognitive scientists, theorists working in complexity theory,

self-organization theory, synergetics, semantics of natural language and mereology, philosophers, epistemologists.

This is a comparative study of the ancient Jewish and Christian views of the ascent into heaven. It places the ascent narratives in their cultural and historical context, and explores their relationship to the canonical apocalypses and to other Graeco-Roman literature of ascent and divinization.

A one-stop, complete guide to tabletop role-playing games for novice librarians as well as seasoned players. Tabletop role-playing games (RPGs) are a perfect fit for library teen services. They not only hold great appeal for teen patrons, but also help build important skills ranging from math and literacy to leadership and dramatics. Role-playing games are cost-effective too. *Dragons in the Stacks* explains why RPGs are so effective at holding teenagers' attention, identifies their specific benefits, outlines how to select and maintain a RPG collection, and demonstrates how they can enhance teen services and be used in teen programs. Detailed reviews of role-playing games are included as well, with pointers on their strengths, weaknesses, and library applications. Coauthored by an experienced young adult librarian and an adult services librarian, this is the definitive guide to RPGs in the library, and the only one currently available.

Operation Snow BRILL

An all-encompassing view of the life and work of one of Canada's greatest living

artists Michael Snow is rightly recognized as one of the greatest Canadian artists. In a productive, lengthy career, he has, in a wide variety of genres and media, asked (and often answered) some of the most vexing and important questions in the history of art. During his lifetime, the notion of what constitutes a work of art has undergone many changes, and his work has consistently been at the forefront of that discussion. *Michael Snow: Lives and Works* examines all aspects of the artist's work and provides a guide to understanding its subtleties and complexities. The book also charts the life of Snow: his early years as a student and artist in Toronto, his stay in New York City, his turbulent marriage to Joyce Wieland, his reputation as a lady's man, and his adventures in movie making and improvised music. In many ways, Snow is the visual artist as intellectual: his images are vibrant and compelling, but so are the ideas behind them.

Ultimately, his work is about perception. What do we really see when we look at a work of art? What is the act of looking all about? What exactly is a work of art? *Michael Snow: Lives and Works* is a personal and intimate portrait of an artist who has helped shaped the face of Canadian art in our time.

Americans have long debated the cause of the December 7, 1941 bombing of Pearl Harbor. Many have argued that the attack was a brilliant Japanese military coup, or a failure of U.S. intelligence agencies, or even a conspiracy of the Roosevelt administration. But despite the attention historians have paid to the bombing of Pearl Harbor, the truth about that fateful day has remained a mystery—until now. In *Operation Snow*:

How a Soviet Mole in FDR's White House Triggered Pearl Harbor, author John Koster uses recently declassified evidence and never-before-translated documents to tell the real story of the day that FDR memorably declared would live in infamy, forever. Operation Snow shows how Joseph Stalin and the KGB used a vast network of double-agents and communist sympathizers—most notably, Harry Dexter White—to lead Japan into war against the United States, demonstrating incontestable Soviet involvement behind the bombing of Pearl Harbor. A thrilling tale of espionage, mystery and war, Operation Snow will forever change the way we think about Pearl Harbor and World War II.

This book discusses advanced topics such as R core programming, object oriented R programming, parallel computing with R, and spatial data types. The author leads readers to merge mature and effective methodologies in traditional programming to R programming. It shows how to interface R with C, Java, and other popular programming languages and platforms.

The cryosphere, that region of the world where water is temporarily or permanently frozen, plays a crucial role on our planet. Recent developments in remote sensing techniques, and the acquisition of new data sets, have resulted in significant advances in our understanding of all components of the cryosphere and its processes. This book, based on contributions from 40 leading experts, offers a comprehensive and authoritative overview of the methods, techniques and recent advances in applications of remote sensing of the cryosphere. Examples of the topics covered include: • snow extent, depth, grain-size and impurities • surface and subsurface melting • glaciers • accumulation over the Greenland and Antarctica ice sheets • ice thickness and velocities • gravimetric measurements from space • sea, lake and river ice • frozen ground and permafrost • fieldwork activities • recent and future cryosphere-oriented missions and experiments All figures are in color and provide an excellent visual accompaniment to the technical and scientific aspect of the book. Readership: Senior undergraduates, Masters and PhD Students, PostDocs and Researchers in cryosphere science and remote sensing. Remote Sensing of the Cryosphere is the significant first volume in the new Cryosphere Science Series. This new

series comprises volumes that are at the cutting edge of new research, or provide focussed interdisciplinary reviews of key aspects of the science.

The application of mesocosms, defined in this report as artificial 3 3 experimental enclosures ranging in size from 1 m to 10m , to address various problems in the marine sciences has been a relatively recent development. The application of the technology was dictated by the realization that many important ocean processes and interactions cannot be fully understood from observations in the natural environment or in smaller enclosures. Such studies involve, for example, determining the interactions between, and energy transfer from, one trophic level to another, the biogeochemical cycling of elements and compounds, etc. These and similar interactions and rate processes cannot normally be established in situations (nature) where the detection and quantification of rate processes are confused by advection and/or the inability to study the same populations over time. In the case of microcosms, mixed populations of primary producers, consumers, and carnivores cannot be maintained, in balance, for a sufficient length of time to determine normal interactions between the various components of these trophic levels. This report, prepared by SCOR Working Group 85, critically examines past applications of mesocosms to ocean research, though there is no attempt to comprehensively review all literature relevant to the subject. Further, the report outlines some important advances

emanating from their use and provides recommendations for future applications. It constitutes the first of two reports from the Working Group (see Introduction).

What if fourteen individuals, working for change in their own communities around the world, came together to tell their stories? In A Definition of Snow, fourteen writers do just that. Gathered by Project VOICE over a period of three years, the writers describe their day-to-day experiences working in social, humanitarian, medical, development and peace-related fields, in Africa, Latin America, Asia and the Middle East, in ways that are powerful, honest and thought-provoking. Such stories, until now, have been mostly unavailable. But they are highly important - and they should be told by those who experienced them and continue to experience them on a daily basis. A Definition of Snow aims to project these unique voices, and bring their stories to readers for the first time. "I come from Africa, a continent that is very rich in many ways. We are very wealthy in non-material things such as happiness, laughter, joy, contentment, generosity and love. We are also wealthy in natural resources, breath-taking scenery and fertile land. However, we are famously known in the western world for poverty, disease, corruption and war. The truth is, we are more than that and there is our side of the story that is often not told." - Sheila Chepkoech, Kenya "I wanted to be free of dictatorship. I wanted to be able to speak my mind without being punished. I wanted to decide for myself what I wanted to be in life. Nobody should decide for me." - Hintsu Solomon, Eritrea/Germany "Girls no longer marry

at 14, they do not school stop at 14 -
this is probably one of the best things we
have done for the community. It is not
easy to change people's mentality and
their convictions." - Noha Rbeiz, Lebanon
