

Under Construction Logics Of Urbanism In The Gulf

When somebody should go to the books stores, search initiation by shop, shelf by shelf, it is in reality problematic. This is why we provide the book compilations in this website. It will no question ease you to look guide **Under Construction Logics Of Urbanism In The Gulf** as you such as.

By searching the title, publisher, or authors of guide you in point of fact want, you can discover them rapidly. In the house, workplace, or perhaps in your method can be every best place within net connections. If you endeavor to download and install the Under Construction Logics Of Urbanism In The Gulf, it is entirely simple then, back currently we extend the link to purchase and make bargains to download and install Under Construction Logics Of Urbanism In The Gulf therefore simple!

*Under Construction Logics Of
Urbanism In The Gulf*

2020-01-27

CUEVAS WILLIAMSON

Routledge Handbook of Sport in the Middle East Black Rose Books Ltd.

To what extent can Islam be localized in an increasingly interconnected world? The contributions to this volume investigate different facets of Muslim lives in the context of increasingly dense transregional connections, highlighting how the circulation of ideas about 'Muslimness' contributed to the shaping of specific ideas about what constitutes Islam and its role in society and politics. Infrastructural changes have prompted the intensification of scholarly and trade networks, prompted the circulation of new literary genres or shaped stereotypical images of Muslims. This, in turn, had consequences in widely differing fields such as self-representation and governance of Muslims. The contributions in this volume explore this issue in geographical contexts ranging from South Asia to Europe and the US. Coming from the disciplines of history, anthropology, religious studies, literary studies and political science, the authors collectively demonstrate the need to combine a translocal perspective with very specific local and historical constellations. The book complicates conventional academic divisions and invites to think in historically specific translocal contexts.

Rethinking the Meaning of Place Artmediaco

Containing papers presented at the 9th International Conference on Sustainable Development and Planning this volume brings together the work of academics, policy makers, practitioners and other international stakeholders and discusses new academic findings and their application in planning and development

strategies, assessment tools and decision making processes. Problems related to development and planning are present in all areas and regions of the world. Accelerated urbanisation has resulted in both the deterioration of the environment and quality of life. Taking into consideration the interaction between different regions and developing new methodologies for monitoring, planning and implementation, new strategies can offer solutions mitigating environmental pollution and non-sustainable use of available resources. Energy saving and eco-friendly buildings have become an important part of modern day progress with emphasis on resource optimisation. Planning is a key part in ensuring that these solutions along with new materials and processes are efficiently incorporated. Planners, environmentalists, architects, engineers and economists have to work collectively to ensure that present and future needs are met. The papers in the book cover a number of topics, including: City planning; Regional planning; Rural developments; Sustainability and the built environment; Sustainability supply chain; Resilience; Environmental management; Energy resources; Cultural heritage; Quality of life; Sustainable solutions in emerging countries; Sustainable tourism; Learning from nature; Transportation; Social and political issues; Community planning; UN Sustainable Development Goals and Timber Structures.

The New Urban Condition Routledge

After more than a century of heroic urban visions, urban dwellers today live in suburban subdivisions, gated communities, edge cities, apartment towers, and slums. The contemporary cities we know are more often the embodiment of unexpected outcomes and unintended consequences rather than visionary planning. As an alternative approach for rethinking and remaking today's cities and regions, this book explores the intersections of critical inquiry

and immediate, substantive actions. The contributions inside recognize the rich complexities of the present city not as barriers or obstacles but as grounds for uncovering opportunity and unleashing potential. Now Urbanism asserts that the future city is already here. It views city making as grounded in the imperfect, messy, yet rich reality of the existing city and the everyday purposeful agency of its dwellers. Through a framework of situating, grounding, performing, distributing, instigating, and enduring, these contributions written by a multidisciplinary group of practitioners and scholars illustrate specificity, context, agency, and networks of actors and actions in the re-making of the contemporary city.

Urban Spaces and Lifestyles in Central Asia and Beyond Columbia University Press

This volume contributes new insights to the scientific debate on post-Socialist urbanities. Based on ethnographic research in cities of Central Asia, the Caucasus and Russia, its contributions scrutinise the social production of diverse public, parochial and private spaces in conjunction with patterns of everyday encounter, identification, consumption and narration. The analyses extend from the transnational entanglements between a Dushanbe bazaar and hyper-modern Dubai to the micro-level hierarchies in a flat-sharing community in Astana. They explore competing notions of urban belonging and aesthetics in Yerevan, local perception of Central Asian Muslims in Kazan and Saint Petersburg, and more, providing a rich tapestry of academic study. Taken together, the case studies address cities as gateways to 'new worlds' (both local and global), discuss ambitions of states at taming urban landscapes, and illustrate current trends of economic, religious and other lifestyles in urban Central Asia and beyond. This book was originally published as a

special issue of Central Asian Survey.

Under Construction University of Toronto Press

The Speculative City explores property speculation as a key aspect of financialization and its role in reshaping the contemporary built environment. The book offers a series of case studies that encompass a range of cities whose urban fabrics have undergone significant transformation in recent years. While the forms of these developments shared many similarities, their trajectories and social outcomes were contingent upon existing planning and policy frameworks and the historical roles assumed by the state and the private sector in housing and welfare provision. By paying close attention to the forces and actors involved in property development, this book underscores that the built environment has played an integral part in the shaping of new values and collective aspirations while facilitating the spread of financial logics in urban governance. It also shows that these dynamics represent a larger shift of politics and culture in the ongoing production of urban space and prompts reflections on future trajectories of finance-led property speculation.

The New Arab Urban Walter de Gruyter GmbH & Co KG

Interdisciplinary in approach, this volume explores and deciphers the symbolic value and iconicity of the built environment in the Arab Gulf Region, its aesthetics, language and performative characteristics. It suggests that recent developments in this region of the world not only represent a showcase of extraordinary initiatives by which these desert states have transformed, but also that the commodification of local 'traditions' acts as an essential element in the countries' effort to design an Arab version of (hyper-)modernity and to position themselves as a regional and global archetype, which has frequently been adopted elsewhere.

Knowledge-Based Urban Development in the Middle East

Routledge

Interdisciplinary in approach, this volume explores and deciphers the symbolic value and iconicity of the built environment in the Arab Gulf Region, its aesthetics, language and performative characteristics. Bringing together a range of studies by artists, curators and scholars, it demonstrates how Dubai appeared - at least until the financial crisis - to be leading the construction race and has already completed a large number of its landmark architecture and strategic facilities. In contrast, cities like the

Qatari capital Doha still appear to be heavily 'under construction' and in countries like the Sultanate of Oman, ultra-luxury tourism projects were started only recently. While the construction of artificial islands, theme parks and prestige sport facilities has attracted considerable attention, much less is known about the region's widespread implementation of innovative infrastructure such as global container ports, free zones, inter-island causeways and metro lines. This volume argues that these endeavours are not simply part of a strategy to prepare for the post-oil era for future economic survival and prosperity in the Lower Gulf region, but that they are also aiming to strengthen identitarian patterns and specific national brands. In doing so, they exhibit similar, yet remarkably diverse modes of engaging with certain global trends and present - questionably - distinct ideas for putting themselves on the global map. Each country aims to grab attention with regard to the world-wide flow of goods and capital and thus provide its own citizens with a socially acceptable trajectory for the future. By doing that, the countries in the Gulf are articulating a new semiotic and paradigm of urban development. For the first time, this volume maps these trends in their relation to architecture and infrastructure, in particular by treating them as semiotics in their own right. It suggests that recent developments in this region of the world not only represent

Deconstructing Placemaking Routledge

Who shapes our cities? In an age of increasing urban pluralism, globalization and immigration, decreasing public budgets, and an ongoing crisis of authority among designers and planners, the urban environment is shaped by a number of non-traditional stakeholders. The book surveys the kaleidoscope of views on the agency of urbanism, providing an overview of the various scholarly debates and territories that pertain to bottom-up efforts such as everyday urbanism, DIY urbanism, guerilla urbanism, tactical urbanism, and lean urbanism. Uniquely, this book seeks connections between the various movements by curating a range of views on the past, present, and future of bottom-up urbanism. The contributors also connect the recent trend of bottom-up efforts in the West with urban informality in the Global South, drawing parallels and finding contrast between social and institutional structures across the globe. The book appeals to urbanists in the widest sense of the word: those who shape, study, and improve our urban spaces.

Claiming and Making Muslim Worlds Springer Nature

This publication aims to investigate the nature of social life in public and urban spaces in the cities of the Middle East, considering the value of environmental approaches. It aims to develop a better understanding of the patterns of social interactions and activities in public places, which have been influenced by cultural heritage values. Sustainable and livable open spaces can help in improving living conditions in cities. Public spaces are relevant as they satisfy many human needs. In public spaces, people interact and meet; people with different cultures and social backgrounds can communicate and learn from each other in social and spontaneous ways. However, decision-makers tend to forget the value of public spaces, especially in the absence of a national regulatory framework in emerging globalized cities. The book provides a multi-disciplinary approach in reading the characteristics and values of public spaces in the emerging cities of the Middle East.

Fundamental Trends in City Development Springer

The Reinvented City reflects on externity, the principal feature of a reinvented city. Three basic trends of the city are investigated; "discomposed", "generic" and "segregated" phenomena with the loss of the city as a space of social interaction and communication. Important questions are posed: What is the true public sphere in contemporary societies? What is the contemporary public space corresponding to it? In what way can the city project construct contemporary public space?

Urban Visions Cornell University Press

The volume encapsulates and engages the dominant history of American suburbia, brings the work of prominent theorists of culture and science into the investigation of urban and suburban development, and broadens the focus of urban studies to the metropolitan region. It will be of particular interest to scholars of urban and suburban development, material culture, and professions, but is accessible enough for use in sociology, geography, planning, and urban and suburban studies courses.

Metaphors in Architecture and Urbanism Routledge

Museum activity has, in recent years, undergone major and rapid development in the Arabian Peninsula, with the regeneration of existing museums as well as the establishment of new ones. Alongside such rapid expansion, questions are inevitably raised as to the new challenges museums face in this region and whether

the museum, as a central focus of heritage preservation, also runs the risk of overshadowing local forms of heritage performance and preservation. With contributions from leading academics from a range of disciplines and heritage practitioners with first-hand experience of working in the region, this volume addresses the issues and challenges facing museums in Kuwait, Saudi Arabia, Qatar, Yemen and the UAE. It focuses on the themes of politics, public engagement and the possibility of a new museum paradigm which might appropriately reflect the interests and culture of the region. The interdisciplinary approaches analyse museum development from both an inside and outside perspective, suggesting that museums do not follow a uniform trajectory across the region, but are embedded within each states' socio-cultural context, individual government agendas and political realities. Including case study analysis, which brings the more marginal nations into the debates, as well as new empirical data and critical evaluation of the role of the museum in the Arabian Peninsula societies, this book adds fresh perspectives to the study of Gulf heritage and museology. It will appeal to regional and international practitioners and academics across the disciplines of museum studies, cultural studies, and anthropology as well as to anyone with an interest in the Gulf and Middle East.

Temporary Cities Taylor & Francis

Interdisciplinary in approach, this volume explores and deciphers the symbolic value and iconicity of the built environment in the Arab Gulf Region, its aesthetics, language and performative characteristics. Bringing together a range of studies by artists, curators and scholars, it demonstrates how Dubai appeared - at least until the financial crisis - to be leading the construction race and has already completed a large number of its landmark architecture and strategic facilities. In contrast, cities like the Qatari capital Doha still appear to be heavily 'under construction' and in countries like the Sultanate of Oman, ultra-luxury tourism projects were started only recently. While the construction of artificial islands, theme parks and prestige sport facilities has attracted considerable attention, much less is known about the region's widespread implementation of innovative infrastructure such as global container ports, free zones, inter-island causeways and metro lines. This volume argues that these endeavours are not simply part of a strategy to prepare for the post-oil era for future economic survival and prosperity in the Lower Gulf region,

but that they are also aiming to strengthen identitarian patterns and specific national brands. In doing so, they exhibit similar, yet remarkably diverse modes of engaging with certain global trends and present - questionably - distinct ideas for putting themselves on the global map. Each country aims to grab attention with regard to the world-wide flow of goods and capital and thus provide its own citizens with a socially acceptable trajectory for the future. By doing that, the countries in the Gulf are articulating a new semiotic and paradigm of urban development. For the first time, this volume maps these trends in their relation to architecture and infrastructure, in particular by treating them as semiotics in their own right. It suggests that recent developments in this region of the world not only represent

Building Cities Routledge

This book explores new architectural and design perspectives on the contemporary urban condition. While architects and urban designers have long maintained that their actions, drawings, and buildings are "post-critical," this book seeks to expand the critical dimension of architecture and urbanism. In a series of historical and theoretical studies, this book examines how the materialities, forms, and practices of architecture and urban design can act as a critique towards the new urban condition. It proposes not only new concepts and theories but also instruments of analysis and reflection to better understand the current counter-hegemonic tendencies in both disciplinary strategies and appropriation tactics. The diversely international selection of chapters, from Brazil, Portugal, Spain, Sweden, the United States, and the Netherlands, combine different theoretical and empirical perspectives into a new analysis of the city and architecture. Demonstrating the need for new critical urban and architectural thinking that engages with the challenges and processes of the contemporary urban condition, this volume will be a thought-provoking read for academics and students in architecture, urban design, geography, political science, and more.

Under Construction: Logics of Urbanism in the Gulf Region Springer Nature

This book sets the stage for understanding how the exponential escalation of digital ubiquity in the contemporary environment is being absorbed, modulated, processed and actively used for enhancing the performance of our built environment. S.M.A.R.T., in this context, is thus used as an acronym for Systems &

Materials in Architectural Research and Technology, with a specific focus on interrogating the intricate relationship between information systems and associative material, cultural and socioeconomic formations within the built environment. This interrogation is deeply rooted in exploring inter-disciplinary research and design strategies involving nonlinear processes for developing meta-design systems, evidence based design solutions and methodological frameworks, some of which, are presented in this issue. Urban health and wellbeing, urban mobility and infrastructure, smart manufacturing, Interaction Design, Urban Design & Planning as well as Data Science, as prominent symbiotic domains constituting the Built Environment are represented in this first book in the S.M.A.R.T. series. The spectrum of chapters included in this volume helps in understanding the multivalence of data from a socio-technical perspective and provides insight into the methodological nuances involved in capturing, analysing and improving urban life via data driven technologies.

The Speculative City Walter de Gruyter GmbH & Co KG

A new taxonomy of placemaking is needed; concerns have been expressed about the professionalization of placemaking through the proliferation of standards, zoning codes, and restrictive covenants. "Place matters" has become a mantra in many disciplines - architecture, urban planning and urban design, geography, and sociology to name a few. While conceptualized narrowly by individual disciplines, a holistic framework of placemaking is sorely missing. Mahyar Arefi seeks to fill this gap by exploring these questions: how are places physically created, socially mobilized, and politically contested? This book explores three competing approaches to placemaking: need-based, opportunity-based, and asset-based. Using a case study approach, the book delves into each paradigm and its stages of physical formation, social mobilization, and political contestation.

Urban Inequalities Routledge

The spread of newly 'invented' places, such as theme parks, shopping malls and revamped historic areas, necessitates a redefinition of the concept of 'place' from an architectural perspective. In this interdisciplinary work, these invented places are categorized according to the different phenomenological experiences they are able to provide. The book explores how such 'cloning spaces' use placemaking and placemarketing in attempt

to replicate the characteristics found in urban spaces traditionally viewed as successful, and how these places can affect society's environmental perception. A range of international empirical studies illustrates how such invented places can be perceived as legitimate urban spaces, and contribute towards the quality of life in today's cities.

The New Companion to Urban Design Springer

This book focuses on the ways in which resiliency can foster the transformation of cities. There is a growing need for our cities to be transformed into "smart" cities; in this regard, tremendous efforts are called for in order to face the environmental challenges that play a major role in the creation or transformation of cities and environments. This book covers a broad range of applications and approaches that are "smart" and "resilient," which, when combined, offer much more flexibility concerning the future of our cities. Consequently, this simple combination, which

is producing sweeping changes around the globe, has attracted considerable attention from scholars and decision-makers alike.

Many Urbanisms Routledge

Building Cities to LAST presents the myriad issues of sustainable urbanism in a clear and concise system, and supports holistic thinking about sustainable development in urban environments by providing four broad measures of urban sustainability that differ radically from other, less long-lived patterns: these are Lifecycle, Aesthetics, Scale, and Technology (LAST). This framework for understanding the relationship between these four measures and the essential types of infrastructure—grouped according to the basic human needs of Food, Shelter, Mobility, and Water—is laid out in a simple and easy-to-understand format. These broad measures and infrastructures address the city as a whole and as a recognizable pattern of human activity and, in turn, increase the ability of cities—and the human race—to LAST.

This book will find wide readership particularly among students and young practitioners in architecture, urban planning, and landscape architecture.

Museums in Arabia Logos Verlag Berlin GmbH

Bringing together leading academics from across a range of disciplines, Emergent Urbanism identifies the specific issues dominating today's urban planning and urban design discourse, arguing that urban planning and design not only results from deliberate planning and design measures, but how these combine with infrastructure planning, and derive from economic, social and spatial processes of structural change. Combining explorations from urban planning, urban theory, human geography, sociology, urban design and architecture, the volume provides a comprehensive and state-of-the-art overview, highlighting the complexities of these interactions in space and place, process and design.
