**ABC of Complementary Medicine** ScholarlyEditions

In the late nineteenth century on the eve of the formation of Australia as a nation-state in 1902, the Australian medical system could be best described as a pluralistic one in the sense that while regular medicine constituted the predominant medical system, it was not clearly the dominant one in that regular physicians faced competition from a wide array of alternative practitioners. As regular medicine increasingly assumed the guise of being scientific, it evolved into biomedicine and developed a link with corporate and state interests in the early twentieth century in Australia, as in other capitalist developed societies. Relying upon state support, Australian biomedicine has achieved dominance over alternative medical system, such as homeopathy, herbal medicine, osteopathy, chiropractic, and naturopathy. Various social forces, particularly the development of the holistic health movement, have served to challenge biomedical dominance in Australia, like elsewhere. What started out as a popular health movement in the early 1970s has evolved into the professionalized entity that is generally referred to as 'complementary medicine' in Australia (as opposed to 'complementary and alternative medicine' in the US and UK). Complementary medicine in Australia encompasses many medical systems and therapies. Since the 1980s certain heterodox medical systems, particularly chiropractic, osteopathy, acupuncture and Chinese medicine, naturopathy, Western herbalism, and homeopathy, have achieved considerable recognition from the Australian state, either at the federal level or at the state and territorial levels. Indeed, the Australian state appears to have gone further than any other Anglophone country in terms of providing public funding for complementary medicine education. Conversely, it has committed a limited amount of funding for complementary medicine research compared to the United States. **Complementary and Alternative Medicine for Health Professionals** Elsevier Health Sciences Integration of complementary and alternative medicine therapies (CAM) with conventional medicine is occurring in hospitals and physicians offices, health maintenance organizations (HMOs) are covering CAM therapies, insurance coverage for CAM is increasing, and integrative medicine centers and clinics are being established, many with close ties to medical schools and teaching hospitals. In determining what care to provide, the goal should be comprehensive care that uses the best scientific evidence available regarding benefits and harm, encourages a focus on healing, recognizes the importance of compassion and caring, emphasizes the centrality of relationship-based care, encourages patients to share in decision making about therapeutic options, and promotes choices in care that can include complementary therapies where appropriate. Numerous approaches to delivering integrative medicine have evolved. Complementary and Alternative Medicine in the United States identifies an urgent need for health systems research that focuses on identifying the elements of these models, the outcomes of care delivered in these models, and whether these models are cost-effective when compared to conventional practice settings. It outlines areas of research in convention and CAM therapies, ways of integrating these therapies, development of curriculum that provides further education to health professionals, and an amendment of the Dietary Supplement Health and Education Act to improve quality, accurate labeling, research into use of supplements, incentives for privately funded research into their efficacy, and consumer protection against all potential hazards.
