[Includes 12 maps and 4 tables] In recent years, the U.S. Army has paid increasing attention to the conduct of

unconventional warfare. However, the base of historical experience available for study has been largely American and overwhelmingly Western. In *Russian-Soviet Unconventional Wars in the Caucasus, Central Asia, and Afghanistan*, Dr. Robert F. Baumann makes a significant contribution to the expansion of that base with a well-researched analysis of four important episodes from the Russian-Soviet experience with unconventional wars. Primarily employing Russian sources, including important archival documents only recently declassified and made available to Western scholars, Dr. Baumann provides an insightful look at the Russian

conquest of the Caucasian mountaineers (1801-59), the subjugation of Central Asia (1839-81), the reconquest of Central Asia by the Red Army (1918-33), and the Soviet war in Afghanistan (1979-89). The history of these wars—especially as it relates to the battle tactics, force structure, and strategy employed in them—offers important new perspectives on elements of continuity and change in combat over two centuries. This is the first study to provide an in-depth examination of the evolution of the Russian and Soviet unconventional experience on the predominantly Muslim southern periphery of the former empire.

There, the Russians encountered fierce resistance by peoples whose cultures and views of war differed sharply from their own. Consequently, this Leavenworth Paper addresses not only issues germane to combat but to a wide spectrum of civic and propaganda operations as well.

New Blueprint for English Ubiquity Press "A Blueprint for Better Banking" takes a fresh look at the financial crisis. It sets out to answer specifically what the mistakes were that banks made and how this could have been avoided. What is unique about this book is a detailed description of a large bank that operates very differently from its peers and that has, as a result, steered clear

of the areas that have brought many other banks into trouble. This provides a number of insights into how a more resilient, post-credit crunch banking system should look. The first section begins with an overview of existing explanations of the crisis and why they remain partly unsatisfactory. It then sets out an alternative framework based around seven behavioural patterns of imprudent banking. These 'Seven Deadly Sins' have caused most banking crises, including the current one, and while they come in different shapes and forms they remain essentially the same. This book examines why they remain extremely tempting to bankers, often with the

enthusiastic support of their shareholders and no meaningful objection by regulators. The second and main part of the book is a new and extensive description of the management practices at Svenska Handelsbanken, one of the top 25 banks in Europe. It not only survived the Swedish banking crisis in the 1990s without asking for support, but it has also remained stable during the latest crisis. Handelsbanken did not have to raise capital or ask for government support and its shares have been the best performing European bank stock by a wide margin. The bank has traditionally been run by management practices that are diametrically opposed to so-called 'best

practice' in the industry. The book investigates how Handelsbanken operates without bonuses and examines their unique organisation, strategy discussion, risk management and capital markets communication. In effect, the book describes how Handelsbanken ensures that it does not fall for any of the Seven Deadly Sins. Niels Kroner has conducted over fifty interviews with Handelsbanken executives and competitors, and also draws on his inside experience of many other institutions to bring out the important differences between the 'Handelsbanken way' and common practices at other

banks. The final part summarises what other banks and financial institutions can learn from Handelsbanken and how its model may offer a solution that other potential regulatory changes may not.

Production ergonomics – the science and practice of designing

industrial workplaces to optimize human well-being and system performance – is a complex challenge for a designer. Humans are a valuable and flexible resource in any system of creation, and as long as they stay healthy, alert and motivated, they perform well and also become more competent over time, which increases their value as a resource. However, if a system designer is not mindful or aware of the many threats to health and system performance that may emerge, the end result may include inefficiency, productivity losses, low working morale, injuries and sick-leave. To help budding system designers and production engineers tackle these design

challenges holistically, this book offers a multi-faceted orientation in the prerequisites for healthy and effective human work. We will cover physical, cognitive and organizational aspects of ergonomics, and provide both the individual human perspective and that of groups and populations, ending up with a look at global challenges that require workplaces to become more socially and economically sustainable. This book is written to give you a warm welcome to the subject, and to provide a solid foundation for improving industrial workplaces to attract and retain healthy and productive staff in the long run.

This book examines the role textbooks play in the teaching of dominant and non-dominant (first and foreign) languages in a range of cultural contexts worldwide.

Each chapter addresses important issues related to what constitutes "legitimate knowledge", the politics of learning materials, global cultural awareness, competing ideologies, and the development of multilingual literacies. Language, Ideology and Education: The Politics of Textbooks in Language Education comprehensively surveys theoretical perspectives and methodological issues in the critical examination of

language textbooks. In particular, it looks at: The Cultural Politics of Language Textbooks in the Era of Globalization The Politics of Instructional Materials for English for Young Learners Ideological Tensions and Contradictions in Lower Primary English Teaching Materials in Singapore Creating a Multilingual/multicultural Space in Japanese EFL: A Critical Analysis of Discursive Practices within a New Language Education Policy The book is primarily addressed to those who teach and research in the areas of Foreign Language Education, TESOL, Applied Linguistics, Language Policy, Critical Pedagogy, and Textual Cultures. Although the book is focused on textbook

and materials analysis, rather than evaluation, most chapters discuss implications for curriculum design and materials development and therefore will be relevant to scholars working in those fields. *Against Method* Holt McDougal

Times of transition can be viewed as times of crisis -- epistemologically, morally and socially. They also can come to be seen as fortuitous junctures where the impossibility of preserving old patterns gives rise to a leap into

new, productive configurations. In the teaching and learning situations presented here, it is assumed that such a leap is possible among members of a pluralist society.

Diversity must work as an asset rather than a liability for minority as well as mainstream candidates. The curriculum needs to be inquiry-based and should be engaging emotionally and imaginatively, as well as intellectually.

Eat, Drink, Nap John Wiley & Sons

Few discussions in modern social science have occupied as much attention as the changing nature of welfare states in western societies.

Gosta Esping-Andersen, one of the most distinguished contributors to current

debates on this issue, here provides a new analysis of the character and role of welfare states in the functioning of contemporary advanced western societies. Esping-Andersen distinguishes several major types of welfare state, connecting these with variations in the historical development of different western countries. Current economic processes, the author argues, such as those moving towards a post-industrial order, are not shaped by autonomous market forces but by the nature of states and state differences. Fully informed by comparative materials, this book will have great appeal to everyone working on

issues of economic development and post-industrialism. Its audience will include students and academics in sociology, economics and politics.
