Optimum nutrition and good feeding of infants and young children are key determinants of their health, growth and development, both physical and mental. Good feeding practices will prevent malnutrition and early growth retardation, which is still common in some parts of the World Health Organization European Region. This publication contains the scientific rationale for the development of national nutrition and feeding recommendations from birth to age three years. The guidelines and recommendations are designed for the WHO European Region, with emphasis on the countries of the former Soviet Union. They are especially applicable to the most vulnerable groups of infants and young children living in deprived conditions, mainly in Eastern Europe , but also in ethnic minority and low income groups in Western Europe.

Perinatal Palliative Care Mosby

This unique book is a first-of-its-kind resource that comprehensively covers each facet and challenge of providing optimal perinatal palliative care. Designed for a wide and multi-disciplinary audience, the subjects covered range from theoretical to the clinical and the practically relevant, and all chapters include case studies that provide real-world scenarios as additional teaching tools for the reader. Perinatal Palliative Care: A Clinical Guide is divided into four sections. Part One provides the foundation, covering an overview of the field, key theories that guide the practice of perinatal palliative care, and includes a discussion of perinatal ethics and parental experiences and needs upon receiving a life-limiting fetal diagnosis. Part Two delves further into practical clinical care, guiding readers through issues of obstetrical management, genetic counseling, neonatal pain

management, non-pain symptom management, spiritual care, and perinatal bereavement care. Part Three discusses models of perinatal palliative care, closely examining evidence for different types of PPC programs: from hospital-based programs, to community-based care, and examines issues of interdisciplinary PPC care coordination, birth planning, and team support. Finally, Part Four concludes the book with a close look at special considerations in the field. In this section, racial, ethnic, and cultural perspectives and implications for PPC are discussed, along with lessons in how to provide PPC for a wide-range of clinical and other healthcare workers. The book closes with a look to the future of the field of perinatal palliative care. Thorough and practical, Perinatal Palliative Care: A Clinical Guide is an ideal resource for any healthcare practitioner working with these vulnerable patient populations, from palliative care specialists, to obstetricians, midwives, neonatologists, hospice providers, nurses, doulas, social workers, chaplains, therapists, ethicists, and child life specialists.

Points of View in the Modern History of Psychology is a collection of papers that presents each individual contributor's expert knowledge of history in the field of psychology. One paper examines Wilhelm Wundt's concept of psychology as the propaedeutic science surviving and inspiring a generation or more of psychologists. Another paper discusses the early sources and the basic conceptions of functionalism as used in America. John B. Watson proclaims behaviorism as a new discipline in psychology with defining features, such as an objective, deterministic, scientific, and experimental method that can be used in both human and animal studies. Lieberman (1979), Mackenzie (1977) Miller, Galanter, and Pribram (1960) oppose behaviorism on the grounds that it slights the purpose of psychology, and focuses more on methodology to the detriment of theory. One paper notes that the acceptance or influence that a point of view has is based in some ways on the range and clarity of its connections with experimental and observational reality. This collection can prove useful for psychologists, behavioral scientists, psychiatrists, psycho-analysts, students of psychology, philosophy or general history who are interested in the many viewpoints of psychology.

Infants master crawling and walking in varied environments while their bodies and skills continually change. This longitudinal study examines their adaptive responses and reveals a process of differentiation and selection spurred by changes in everyday experience, body dimensions, and locomotor proficiency. The findings indicate that infants learn to gauge their abilities "on-line" as they encounter new situations.

"Not of woman born, the Fortunate, the Unborn"—the terms designating those born by Caesarean section in medieval and Renaissance Europe were mysterious and ambiguous. Examining representations of Caesarean birth in legend and art and tracing its history in medical writing, Renate Blumenfeld-Kosinski addresses the web of religious, ethical, and cultural questions concerning abdominal delivery in the Middle Ages and the Renaissance. Not of Woman Born increases our understanding of the history of the medical profession, of medical iconography, and of ideas surrounding "unnatural" childbirth. Blumenfeld-Kosinski compares texts and visual images in order to trace the evolution of Caesarean birth as it was perceived by the main actors involved—pregnant women, medical practitioners, and artistic or literary interpreters. Bringing together medical treatises and texts as well as hitherto unexplored primary sources such as manuscript illuminations, she provides a fresh perspective on attitudes toward pregnancy and birth in the Middle Ages and the Renaissance; the meaning and consequences of medieval medicine for women as both patients and practitioners, and the professionalization of medicine. She discusses writings on Caesarean birth from the twelfth and thirteenth centuries, when Church Councils ordered midwives to perform the operation if a mother died during childbirth in order that the child might be baptized; to the fourteenth century, when the first medical text, Bernard of Gordon's *Lilium medicinae*, mentioned the operation; up to the gradual replacement of midwives by male surgeons in the fifteenth and sixteenth centuries. Not of Woman Born offers the first close analysis of Franois Rousset's 1581 treatise on the operation as an example of sixteenth-century medical discourse. It also considers the ambiguous nature of Caesarean birth, drawing on accounts of such miraculous examples as the birth of the Antichrist. An appendix reviews the complex etymological history of the term "Caesarean section." Richly interdisciplinary, Not of Woman Born will enliven discussions of the controversial issues surrounding Caesarean delivery today. Medical, social, and cultural historians interested in the Middle Ages and the Renaissance, historians, literary scholars, midwives, obstetricians, nurses, and others concerned with women's history will want to read it.

Meeting the Challenge in the Developing World Elsevier

This volume covers aspects of sudden infant and early childhood death, ranging from issues with parental grief, to the most recent theories of brainstem neurotransmitters. It also deals with the changes that have occurred over time with the definitions of SIDS (sudden infant death syndrome), SUDI (sudden unexpected death in infancy) and SUDIC (sudden unexpected death in childhood). The text will be indispensable for SIDS researchers, SIDS organisations, paediatric pathologists, forensic pathologists, paediatricians and families, in addition to residents in training programs that involve paediatrics. It will also be of use to other physicians, lawyers and law enforcement officials who deal with these cases, and should be a useful addition to all medical examiner/forensic, paediatric and pathology departments, hospital and university libraries on a global scale. Given the marked changes that have occurred in the epidemiology and understanding of SIDS and sudden death in the very young over the past decade, a text such as this is very timely and is also urgently needed.

This accessible textbook is the only introduction to linguistics in which each chapter is written by an expert who teaches courses on that topic, ensuring balanced and uniformly excellent coverage of the full range of modern linguistics. Assuming no prior knowledge the text offers a clear introduction to the traditional topics of structural linguistics (theories of sound, form, meaning, and language change), and in addition provides full coverage of contextual linguistics, including separate chapters on discourse, dialect variation, language and culture, and the politics of language. There are also up-to-date separate chapters on language and the brain, computational linguistics, writing, child language acquisition, and second-language learning. The breadth of the textbook makes it ideal for introductory courses on language and linguistics offered by departments of English, sociology, anthropology, and communications, as well as by linguistics departments.
