They crossed a wormhole, a portal in time, a gateway to a different world. They had done it before, but this one was different-This wormhole was man-made. President Matt Blake realized that the country was in the grips of a crisis, one which he dubbed, The Wormhole Crisis. Recognizing Admiral Patterson's talent for fearless leadership, he promoted her to fleet Admiral, the highest rank in the Navy. At the same time he appointed her Chairwoman of the Joint Chiefs of Staff, the highest position in the American military. The President knew he had a horrifying crisis to solve, and who better to lead the effort than Admiral Patterson. He put her in charge of Operation Wormhole Kill, along with her close husband, Jack. Together they embarked on a terrifying attempt to save the world from man-made time travel. A rogue nation had manufactured a wormhole-creating satellite, one which can inflict a wormhole anywhere on earth. The problem got worse when that nation created an instrument on the satellite that can detonate a bomb on earth-from space. The only way to deal with a wormhole is to recross it to find your way back to the time you came from. But the rogue nation created a new type of wormhole-one that didn't enable you to recross it. One horrifying night, the evening of the annual State of the Union Address, saw the ultimate result of the terrifying satellite, one that could spell the end of the world. Instantly the fate of the world changed, especially for Admiral Patterson. It was a new world, a world Ashley could never have imagined. The fate of mankind was in Admiral Patterson's hands.

The Third Edition of ANSI/ACCA Manual D is the Air Conditioning Contractors of America procedure for sizing residential duct systems. This procedure uses Manual J (ANSI/ACCA, Eighth Edition) heating and cooling loads to determine space air delivery requirements. This procedure matches duct system resistance (pressure drop) to blower performance (as defined by manufacture's blower performance tables). This assures that appropriate airflow is delivered to all rooms and spaces; and that system airflow is compatible with the operating range of primary equipment. The capabilities and sensitivities of this procedure are compatible with single-zone systems, and multi-zone (air zoned) systems. The primary equipment can have a multi-speed blower (PSC motor), or a variable-speed blower (ECM or constant torque motor, or a true variable speed motor). Edition Three, Version 2.50 of Manual D (D3) specifically identifies normative requirements, and specifically identifies related informative material.

The authoritarian and totalitarian systems of individual countries have long been studied

independently of each other. The separation of Eastern and Western Europe was used as a parameter by historians. This also applies to the analysis of Communism and Mussolini's Fascism. Only in recent years has the comparative perspective in the regional, chronological and system-oriented sense been applied, thus allowing many phenomena to be correctly understood and assessed. Central and Eastern Europe is tied to Western and Southern Europe by the experience of dictatorship and the ongoing need to evaluate and come to terms with these dictatorships. In the present anthology Mussolini's Fascism, National Socialism and Communism are examined comparatively. Similarities, connections and mutual influences in these dictatorships are sought. Finally, the transition from dictatorship to democracy is examined. With this collection of essays the editors intend to give impulse for inter-European comparative research on dictatorships and democracy.
