Réflexion sur le type d'unité qui innervent les sciences de l'homme. Ce qui est révélé, à travers l'histoire des sciences humaines, c'est l'impossibilité, selon l'auteur, d'évacuer l'activité mentale jusque dans le discours de la sociologie. Les sciences humaines, loin de faire disparaître la psyché, l'ont au contraire reformulée en la reliant à la série de modifications dont l'homme est l'objet.

Kurt Goldstein starb am 19. September 1965. Bis kurz vor seinem Tode arbeitete er an dem Plan, eine Auswahl seiner wichtigsten Schriften zu veröffentlichen; ein verbindender Text sollte die ungebrochene Entwicklung seiner Ideen von ihren anfänglichen Keimen bis zur späteren vollen Entfaltung darlegen. Der Plan kam nicht mehr zur Vollendung; aber die vorliegende Zusammenstellung der für Kurt Goldstein's Lebenswerk bedeutsamsten Aufsätze mag dessen innere Einheit erhellen. Seine posthum veröffentlichte Autobiographie (s. unten S. 1 ff.) gibt eine knappe Zusammenfassung seiner grundlegenden wissenschaftlichen Ziele und Ergebnisse. Auskünfte über seine hinterlassenen wissenschaftlichen Papiere ist durch mich erhältlich. Herrn Professor Aron Gurwitsch, dem langjährigen Freunde Kurt Goldstein's und intimen Kenner seiner Ideen, der die Einleitung zu diesem Band geschrieben und an seiner Vorbereitung intensiv teilgenommen hat, spreche ich auch hier meine Dankbarkeit aus. Desgleichen danke ich den Verlagshausen, mit deren Erlaubnis die hier enthaltenen Schriften Kurt Goldstein's wieder abgedruckt werden konnten.

This series of HANDBOOKS OF LINGUISTICS AND COMMUNICATION SCIENCE is designed to illuminate a field which not only includes general linguistics and the study of linguistics as applied to specific languages, but also covers those more recent areas which have developed from the increasing body of research into the manifold forms of communicative action and interaction. For "classic" linguistics there appears to be a need for a review of the state of the art which will provide a reference base for the rapid advances in research undertaken from a variety of theoretical standpoints, while in the more recent branches of communication science the handbooks will give researchers both an overview and orientation. To attain these objectives, the series will aim for a standard comparable to that of the leading handbooks in other disciplines, and to this end will strive for comprehensiveness, theoretical explicitness, reliable documentation of data and findings, and up-to-date methodology. The editors, both of the series and of the individual volumes, and the individual contributors, are committed to this aim. The languages of publication are English, German, and French. The main aim of the series is to provide an appropriate account of the state of the art in the various areas of linguistics and communication science covered by each of the various handbooks; however no inflexible pre-set limits will be imposed on the scope of each volume. The series is open-ended, and can thus take account of further developments in the field. This conception, coupled with the necessity of allowing adequate time for each volume to be prepared with the necessary care, means that there is no set

time-table for the publication of the whole series. Each volume will be a self-contained work, complete in itself. The order in which the handbooks are published does not imply any rank ordering, but is determined by the way in which the series is organized; the editor of the whole series enlist a competent editor for each individual volume. Once the principal editor for a volume has been found, he or she then has a completely free hand in the choice of co-editors and contributors. The editors plan each volume independently of the others, being governed only by general formal principles. The series editor only intervenes where questions of delineation between individual volumes are concerned. It is felt that this (modus operandi) is best suited to achieving the objectives of the series, namely to give a competent account of the present state of knowledge and of the perception of the problems in the area covered by each volume.

Traité de pathologie mentale Lavoisier

It is widely believed by historians of linguistics that the 19th-century was largely devoted to historical and comparative studies, with the main emphasis on the discovery of soundlaws. Syntax is typically portrayed as a mere sideline of these studies, while semantics is seldom even mentioned. If it comes into view at all, it is usually assumed to have been confined to diachronic lexical semantics and the construction of some (mostly ill-conceived) typologies of semantic change. This book aims to destroy some of these prejudices and to show that in Europe semantics was an important, although controversial, area at that time. Synchronic mechanisms of semantic change were discovered and increasing attention was paid to the context of the sentence, to the speech situation and the users of the language. From being a semantics of transformations', a child of the biological-geological paradigm of historical linguistics with its close links to etymology and lexicography, the field matured into a semantics of comprehension and communication, set within a general linguistics and closely related to the emerging fields of psychology and sociology.

Handbook of Cannabis and Related Pathologies: Biology, Pharmacology, Diagnosis, and Treatment is the first book to take an interdisciplinary approach to the understanding of cannabis use and misuse. Recent worldwide trends toward decriminalizing marijuana for medical use have increased legal use of the drug and recreational use remains high, making cannabis one of the most commonly used drugs. Cannabis has a wide range of adverse neurological effects, and use and abuse can lead to physical, social, and psychopathological issues that are multifarious and complex. Effective understanding and treatment requires knowledge of the drug's effects from across scientific disciplines. This book provides an overview of the biological and pharmacological components of the cannabis plant, outlines its neurological, social, and psychopathological effects, assists in the diagnosis and screening for use and dependency, and aids researchers in developing effective treatments for cannabis-related issues and disorders. Fully illustrated, with contributions from internationally recognized experts, it is the go-to resource for neuroscientists, pharmacologists, pathologists, public-health workers, and any other researcher who needs an in-depth and cross-disciplinary understanding of cannabis and its effects. Comprehensive chapters include an abstract, key facts, mini dictionary of terms, and summary points. Presents illustrations with at least six figures, tables, and diagrams per chapter. Provides a one-stop-shopping synopsis of everything to do with cannabis and its related pathology, from chemicals and cells, individuals and communities, and diagnosis and treatment. Offers an integrated and informed synopsis of the complex issues surrounding cannabis as a substance, its use, and its misuse.

The *British Journal of Medical Psychology* is an international journal with a traditional orientation towards psychodynamic issues. While maintaining a broad theoretical base and insisting upon sound and sensible methodology, its objective is to avoid

the more simplistic approaches to psychological science. The Journal aims to bring together the medical and psychological disciplines. Collaborative studies between psychiatrists and psychologists are especially encouraged. Original theoretical and research contributions are invited from the fields of psychodynamic and interpersonal psychology, particularly as they have a bearing upon vulnerability to, adjustment to and recovery from both medical and psychological disorders. The Journal aims to promote theoretical and research developments in the fields of subjective psychological states and dispositions, interpersonal attitudes, behaviour and relationships only if they illustrate unusual forms of psychopathology or innovative forms of therapy which carry important theoretical implications.

La classe des médicaments thymorégulateurs s'est longtemps résumée au seul lithium, avant de s'élargir aux anticonvulsivants. Plus récemment, avec les modifications intervenues dans le profil des molécules regroupées dans cette classe médicamenteuse et la remise en cause de la distinction entre antipsychotiques et thymorégulateurs, différentes définitions ont émergé, selon les critères retenus et l'accent sur l'efficacité préventive ou curative. Ces interrogations sur la définition de la classe des thymorégulateurs s'accompagnent d'un questionnement sur l'évolution des modèles nosographiques et donc des stratégies thérapeutiques. Ainsi l'ouvrage a-t-il pour objectif d'apporter les

informations nécessaires à une prescription raisonnée de thymorégulateurs : - les bases fondamentales : mécanismes neurobiologiques, pharmacocinétique, pharmacodynamie, pharmacogénétique, effets sur les processus cognitifs et émotionnels ; - les modalités de prescription : incluant l'instauration, la surveillance, l'arrêt du traitement ainsi que les effets secondaires et les complications, pour le lithium, les anticonvulsivants et les antipsychotiques ; - l'éducation thérapeutique du patient. - les indications : trouble bipolaire, dépression, troubles psychotiques, troubles de la personnalité, addictions, prescriptions dimensionnelles ; - les spécificités liées aux populations et aux situations : association de plusieurs thymorégulateurs ou à un antidépresseur ou à l'ECT, utilisation chez les enfants et les adolescents, chez la femme enceinte ou allaitant, chez les personnes âgées. Réunissant une cinquantaine de spécialistes reconnus, riche d'une trentaine de tableaux et schémas explicatifs et d'un index détaillé, cet ouvrage est la référence indispensable pour tous les praticiens devant prescrire des thymorégulateurs.

This volume offers a selection of papers presented during the 14th International Conference on the History of the Language Sciences (ICHoLS XIV, Paris, 2017). Part I brings together studies dealing with descriptive concepts. First examined is the notion of "accidens" in Latin grammar and its Greek counterparts. Other papers address questions with a strong echo in today's linguistics: localism and its revival in recent semantics and syntax, the origin

of the term "polysemy" and its adoption through Bréal, and the difficulties attending the description of prefabs, idioms and other "fixed expressions". This first part also includes studies dealing with representations of linguistic phenomena, whether these concern the treatment of local varieties (so-called patois) in French research, or the import and epistemological function of spatial representations in descriptions of linguistic time. Or again, now taking the word "representation" literally, the visual display of grammatical relations, in the form of the first syntactic diagrams. Part II presents case studies which involve wider concerns, of a social nature: the "from below" approach to the history of Chinese Pidgin English underlines the social roles of speakers and the diversity of speech situations, while the scrutiny of Lhomond's Latin and French textbooks demonstrates the interplay of pedagogical practice, cross-linguistic comparison and descriptive innovation. An overview of early descriptions of Central Australian languages reveals a whole spectrum of humanist to positivist and antihumanist stances during the colonial age. An overarching framework is also at play in the anthropological perspective championed by Meillet, whose socially and culturally oriented semantics is shown to live on in Benveniste. The volume ends with a paper on Trần Đức Thảo, whose work is an original synthesis between phenomenology and Marxist semiology, wielded against the "idealistic" doctrine of Saussure.
