There are many places we can go to enjoy time with friends, to have an action-packed vacation, or to enjoy a little solitude, but none of them have the same ability to soothe our souls as the beach. Perhaps it's the magic portrayed by children building sand castles or the gentle sounds of lapping waves on the shore.

When Jeffrey Morse visited his doctor on an ordinary day in 2012, he could not have imagined that what began as a headache would swiftly spiral into an aneurism, a dissected artery, and a spinal stroke. The old Jeffrey—a flight engineer, Air Force reservist, and avid scuba diver—died on the operating table that day. The new Jeffrey awoke from surgery paralyzed from the neck down. But Jeffrey had never been the sort to give up. Despite immense pain, depression, anxiety, and doctors who claimed he would never recover, he swore he would walk out of that hospital. Through rigorous therapy, determination, optimism, humor, and support, he not only accomplished that goal but has since recovered the use of nearly all his muscles and gone on to greater adventures than ever. Trauma and disability manifest in many forms, and isolation and despair can overwhelm. Although life may never be the same as it was before, it is possible to survive setbacks and learn new ways to adapt, adjust, and thrive. Join Jeffrey on his inspiring journey, and learn how he found his way forward to a new life.

Finalist for the 2018 National Council on Crime & Delinquency's Media for a Just Society Awards Nominated for the 49th NAACP Image Award for Outstanding Literary Work (Nonfiction) A 2017 Washington Post Notable Book A Kirkus Best Book of 2017 “Butler

has hit his stride. This is a meditation, a sonnet, a legal brief, a poetry slam and a dissertation that represents the full bloom of his early thesis: The justice system does not work for blacks, particularly black men.” —The Washington Post “The most readable and provocative account of the consequences of the war on drugs since Michelle Alexander’s *The New Jim Crow* . . . .” —The New York Times Book Review “Powerful . . . deeply informed from a legal standpoint and yet in some ways still highly personal” —The Times Literary Supplement (London) With the eloquence of Ta-Nehisi Coates and the persuasive research of Michelle Alexander, a former federal prosecutor explains how the system really works, and how to disrupt it. Cops, politicians, and ordinary people are afraid of black men. The result is the Chokehold: laws and practices that treat every African American man like a thug. In this explosive new book, an African American former federal prosecutor shows that the system is working exactly the way it's supposed to. Black men are always under watch, and police violence is widespread—all with the support of judges and politicians. In his no-holds-barred style, Butler, whose scholarship has been featured on 60 Minutes, uses new data to demonstrate that white men commit the majority of violent crime in the United States. For example, a white woman is ten times more likely to be raped by a white male acquaintance than be the victim of a violent crime perpetrated by a black man. Butler also frankly discusses the problem of black on black violence and how to keep communities safer—without relying as much on police. Chokehold powerfully demonstrates why current efforts to reform law enforcement will not create lasting change. Butler's controversial recommendations about how to crash the system, and when it's better for a black man to plead guilty—even if he's innocent—are sure to be game-changers in the national debate about policing, criminal justice, and race relations.

Practical Acceptance Sampling is a hands-on introduction to the inspection of products and services for quality assurance using statistically-based sampling plans. In today's era of global supply chains, the path from raw materials to final product often takes place over multiple companies and across multiple continents. Acceptance sampling is key in the 21st century environment. Acceptance sampling plans provide criteria and decision rules for determining whether to accept or reject a batch based on a sample. They are therefore widely used by manufacturers, suppliers, contractors and subcontractors, and service providers in a wide range of industries. The book introduces readers to the most popular sampling plans, including Military Standards and civilian ISO and ANSI/ASQC/BS standards. It covers the design, choice and performance evaluation of different types of plans, including single- and double-stage plans, rectifying and non-rectifying plans, plans for pass/fail and continuous measurements, continuous sampling plans, and more. Practical Acceptance Sampling is suitable for courses on quality control and for quality practitioners with basic knowledge of statistics. It offers clear explanations, examples, end-of-chapter problems, and illustrations of state-of-the-art online resources. Methods are illustrated using Microsoft Excel, online calculators, and SQCOnline.com. However, any statistical software can be used with the book. A companion website to the book is available at [www.SamplingBook.com](http://www.SamplingBook.com). New to the second edition: A section on Acceptance-on-Zero plans, additional screenshots from the newly-designed SQCOnline.com with several new calculators, and improved book design for enhanced readability.

The book discusses the concepts of E-Governance from the understanding of a naive user. While providing introduction to the concept, it shows the status of E-Governance in India through various measures, and its progress through different case studies. The historical development of E-Governance around the world and its rise in few developed and developing nations have also been discussed. The book also elaborates the establishment of E-Governance in India in detail and then compares the progress in Indian states through different measures and metrics. The structure of the E-Governance in India has been explained, including the explanation of the details related to National E-Governance Plan. The book is a combination of theoretical and practical concepts defined over various aspects of E-Governance in India. This book serves as the first stage reading material for any individual working in the Indian region on E-Governance.

Projects are investments of resources for achieving a particular objective or set of objectives. Resources include time, money, manpower, and sometimes lives. Objectives include financial gain, social and health benefits, national goals, educational and scientific achievements, and reduction of suffering, among many

others. Projects are undertaken by large and small organizations, by governments, non-profit organizations, private businesses, and by individuals. Determining whether to execute a project, or which project to execute among a set of possibilities is often a challenge with high stakes. Assessing the potential outcomes of a project can therefore be detrimental, leading to the importance of making informative decisions. Practical Risk Analysis for Project Planning is a hands-on introduction to integrating numerical data and domain knowledge into popular spreadsheet software such as Microsoft Excel or Google Spreadsheets, to arrive at informed project-planning decisions. The focus of the book is on formalizing domain expertise into numerical data, providing tools for assessing potential project performance, and evaluating performance under realistic uncertainty. The book introduces basic principles for assessing potential project performance and risk under different scenarios, by addressing uncertainty that arises at different levels. It describes measures of expected performance and risk, presents approaches such as scenario building and Monte Carlo simulation for addressing uncertainty, and introduces methods for comparing competing projects and reducing risk via project portfolios. No special software is required except Excel or another spreadsheet software. While the book assumes no knowledge of statistics, operations research, or management science, it does rely on basic familiarity with Excel. Chapter exercises and examples of real projects are aimed at hands-on learning. For more information visit [RiskAnalysisBook.com](http://RiskAnalysisBook.com)

WordNet, an electronic lexical database, is considered to be the most important resource available to researchers in computational linguistics, text analysis, and many related areas. English nouns, verbs, adjectives, and adverbs are organized into synonym sets, each representing one underlying lexicalized concept. Different relations link the synonym sets. The purpose of this volume is twofold. First, it discusses the design of WordNet and the theoretical motivations behind it. Second, it provides a survey of representative applications, including word sense identification, information retrieval, selectional preferences of verbs, and lexical chains.

While previous reports have focused solely on the 'big' issues like capital account convertibility, bank privatization, and priority sector norms, A Hundred Small Steps: Report of the Committee on Financial Sector Reforms goes deep into other areas where reforms are less controversial, but perhaps as important. The report argues that we need a change in mindset for the financial sector, one that recognizes that efficiency, innovation, and value for money are as important for the poor as they are for our new Indian multinationals, and these will come from improved governance, new entry and competition. Indeed the Committee believes that the road to making Mumbai an international financial centre runs through every village in India. The report is divided into separate self-contained chapters; the underlying theme behind all the proposals is the need to enhance inclusion, growth, and stability by allowing players more freedom, even while strengthening the financial and regulatory infrastructure. The role of the government is to create an enabling environment by building sound financial infrastructure. The Committee has focused primarily on broad principles and directions, without entering too much into details of implementation. It emphasizes three important reasons for financial sector reform: to include more Indians in the growth process; to foster growth itself; and to improve financial stability, flexibility, and resilience and thus protect the economy against the kind of turbulence that is affecting the world today. The Committee recognizes this is a difficult time to propose financial sector reforms in India. The near meltdown of the US financial sector seems to be proof that markets and competition do not work. This is clearly the wrong lesson to take from the debacle. The right lesson is that markets and institutions do succumb occasionally to excesses, which is why regulators have to be vigilant. The report argues for skilled regulators who encourage growth and innovation even while working harder to contain risks.
