By the early-1980s Kosovo had reached a state of permanent crisis and military occupation, and it became the main focus for the revival of Serbian nationalism. This book traces the history of Kosovo, examining the Yugoslavian conflict, and the part played by Western Europe in its destruction. 'This is a profound and important book, essential reading for those who wish to understand either the complex history or the present politics of Yugoslavia.' Hugh Trevor-Roper, SUNDAY TELEGRAPH 'A dreadnought of a book, all big guns, covering the whole history of Kosovo, with an authority that is often breathtaking and never oppressive.' Norman Stone, SUNDAY TIMES

What is temperature, and how can we measure it correctly? These may seem like simple questions, but the most renowned scientists struggled with them throughout the 18th and 19th centuries. In *Inventing Temperature*, Chang examines how scientists first created thermometers; how they measured temperature beyond the reach of standard thermometers; and how they managed to assess the reliability and accuracy of these instruments without a circular reliance on the instruments themselves. In a discussion that brings together the history of science with the philosophy of science, Chang presents the simple yet challenging epistemic and technical questions about these instruments, and the complex web of abstract philosophical issues surrounding them. Chang's book shows that many items of knowledge that we take for granted now are in fact spectacular achievements, obtained only after a great deal of innovative thinking, painstaking experiments, bold conjectures, and controversy. Lurking behind these achievements are some very important philosophical questions about how and when people accept the authority of science.

For more than a thousand years before the arrival of the Slavs in the sixth century AD, the lands between the Adriatic and the river Danube, now Yugoslavia and Albania, were the home of the peoples known to the ancient world as Illyrians. This book, now available in paperback, draws upon the considerable archaeological evidence that has become available since the Second World War to provide an account of the origins, culture, history and legacy of the Illyrians. John Wilkes describes the geography of Illyria and surveys the region in the prehistoric, Greek, Roman and medieval periods. He discusses Illyrian art, material, culture, religion and customs. A chapter examines the

Illyrian language, of which little trace survives, and its connection with other Indo-European languages. Professor Wilkes also scrutinizes the linguistic evidence for the Illyrians' relatedness to other peoples - Thracian, Italic, Greek and Celtic. He concludes with a discussion of a possible survival of an Illyrian native culture in the Roman and Byzantine periods.

The first historical heroic epic authored by a woman, Scanderbeide recounts the exploits of fifteenth-century Albanian warrior-prince George Scanderbeg and his war of resistance against the Ottoman sultanate. Filled with scenes of intense and suspenseful battles contrasted with romantic episodes, Scanderbeide combines the action and fantasy characteristic of the genre with analysis of its characters' motivations. In selecting a military campaign as her material and epic poetry as her medium, Margherita Sarrocchi (1560?-1617) not only engages in the masculine subjects of political conflict and warfare but also tackles a genre that was, until that point, the sole purview of men. First published posthumously in 1623, Scanderbeide reemerges here in an adroit English prose translation that maintains the suspense of the original text and gives ample context to its rich cultural implications.

Sacred Ecology examines bodies of knowledge held by indigenous and other rural peoples around the world, and asks how we can learn from this knowledge and ways of knowing. Berkes explores the importance of local and indigenous knowledge as a complement to scientific ecology, and its cultural and political significance for indigenous groups themselves. This third edition further develops the point that traditional knowledge as process, rather than as content, is what we should be examining. It has been updated with about 150 new references, and includes an extensive list of web resources through which instructors can access additional material and further illustrate many of the topics and themes in the book. Winner of the Ecological Society of America's 2014 Sustainability Science Award.

CONGRATULATIONS TO HERBERT KROEMER, 2000 NOBEL LAUREATE FOR PHYSICS For upper-division courses in thermodynamics or statistical mechanics, Kittel and Kroemer offers a modern approach to thermal physics that is based on the idea that all physical systems can be described in terms of their discrete quantum states, rather than drawing on 19th-century classical mechanics concepts.

In many industrial applications, the existing constraints mandate the use of controllers of low and fixed order while typically, modern methods of optimal control produce high-order controllers. The authors seek to start to bridge the resultant gap and present a novel methodology for the design of low-order controllers such as those of the P, PI and PID types. Written in a self-contained and tutorial fashion, this book first develops a fundamental result, generalizing a classical stability theorem – the Hermite-Biehler Theorem – and then applies it to designing controllers that are widely used in industry. It contains material on: • current techniques for PID controller design; • stabilization of linear time-invariant plants using PID controllers; • optimal design with PID controllers; • robust and non-fragile PID controller design; • stabilization of first-order systems with time delay; • constant-gain stabilization with desired damping • constant-gain stabilization of discrete-time plants.

Freshwater Algae: Identification and Use as Bioindicators provides a comprehensive guide to temperate freshwater algae, with additional information on key species in relation to environmental characteristics and implications for aquatic management. The book uniquely combines practical material on techniques and water quality management with basic algal taxonomy and the role of algae as bioindicators. Freshwater Algae: Identification and Use as Bioindicators is divided into two parts. Part I describes techniques for the sampling, measuring and observation of algae and then looks at the role of algae as bioindicators and the implications for aquatic management. Part II provides the identification of major genera and 250 important species. Well illustrated with numerous original illustrations and photographs, this reference work is essential reading for all practitioners and researchers concerned with assessing and managing the aquatic environment.

Visualization in Modern Cartography Pearson

Visualization in Modern Cartography explores links between the centuries-old discipline of cartography and today's revolutionary developments in scientific visualization. The book has three main goals: (1) to pass on design and symbolization expertise to the scientific visualization community - information that comes from centuries of pre-computer visualization by cartographers, and their more recent experiences with computerizing the discipline; (2) to help cartographers cope with the dramatic shift from print cartography to a dynamic virtual cartography for which their role is changing from that of map designer to one of spatial information display (and/or interface) designer; (3) to illustrate the expanded role for cartography in geographic, environmental, planning, and earth science applications that comes with the development of interactive geographic visualization tools. To achieve these goals, the book is divided into three parts. The first sets the historical, cognitive, and technological context for geographic/cartographic visualization tool development. The second covers key technological, symbolization, and user interface issues. The third provides a detailed look at selected prototype geographic/cartographic visualization tools and their applications.

This authoritative reference follows the history of conflicts in the Balkan Peninsula from the 19th century through the present day. The Balkan Peninsula, which consists of Albania, Bulgaria, Romania, Moldova, and the former Yugoslavia, resides in the southeastern part of the European continent. Its strategic location as well as its long and bloody history of conflict have helped to define the Balkans' role in global affairs. This singular reference focuses on the events, individuals, organizations, and ideas that have made this region an international player and shaped warfare there for hundreds of years. Historian and author Richard C. Hall traces the sociopolitical history of the area, starting with the early internal conflicts as the Balkan states attempted to break away from the Ottoman Empire to the assassination of Archduke Franz Ferdinand that ignited World War I to the Yugoslav Wars that erupted in the 1990s and the subsequent war crimes still being investigated today. Additional coverage focuses on how these countries continue to play an important role in global affairs and international politics.

"THE CODE OF LEKE DUKAGJINI is a great cultural treasure, comparable to the chapters of The Old Testament." "It provides deep insights into the ancient society of the Albanians, their somber dignity & their magnificent sense of honor."--David Binder, The New York Times. "This legal system was established & passed on to future generations as a common law by Leke Dukagjini, a co-fighter of the legendary Skenderbeg." "The 'Besa' or the 'word of honor' as stated in THE CODE OF LEKE

DUKAGJINI which means peace & protection to those whom it is given, has become today an important fighting tool in the political struggle of Kosovo's Albanians against Serb oppression."-- Victor Meier, *The Frankfurter Allgemeine Zeitung*. "The legal Code of the Albanians known by them for a thousand years, is one of the most original in the history of mankind. Among the basic pillars of this code are the equality of men before the code & the non-abuse of justice." "The entire essence of the legal code of the Albanians is an unparalleled rigorous respect for this basic principle: non-violation of the dignity of a man- his honor, home, & life."--Ismail Kadare, Albanian writer. *Geschichte Der Halbinsel Morea Während Des Mittelalters* Bloomsbury Publishing USA

Nationalism has given the world a genre of poetry bright with ideals of justice, freedom and the brotherhood of man, but also, at times, burning with humiliation and grievance, hatred and lust for revenge, driving human kind, as the Austrian poet Grillparzer put it, 'From humanity via nationality to bestiality'. *National Poetry, Empires and War* considers national poetry, and its glorification of war, from ancient to modern times, in a series of historical, social and political perspectives. Starting with the Hebrew Bible and Homer and moving through the Crusades and examples of subsequent empires, this book has much on pre-modern national poetry but focuses chiefly on post-1789 poetry which emerged from the weakening and collapse of empires, as the idealistic liberalism of nationalism in the age of Byron, Whitman, D'Annunzio, Yeats, Bialik, and Kipling was replaced by

darker purposes culminating in World War I and the rise of fascism. Many national poets are the subject of countless critical and biographical studies, but this book aims to give a panoramic view of national poetry as a whole. It will be of great interest to any scholars of nationalism, Jewish Studies, history, comparative literature, and general cultural studies.

The United States declared war on terrorism in the wake of the 9/11 attacks. More than ten years later, the results are decidedly mixed. In *The Thistle and the Drone*, Akbar Ahmed reveals a tremendously important yet largely unrecognized adverse effect of these campaigns: they actually have exacerbated the already-broken relationship between central governments and the tribal societies on their periphery. Drawing on forty case studies, this groundbreaking analysis demonstrates that it is the conflict between the centre and the periphery and the involvement of the United States that has fuelled the war on terror. No one is immune to this violence - neither school children, nor congregations in their houses of worship. Battered by military or drone strikes one day and suicide bombers the next, people on the periphery say, 'Every day is like 9/11 for us.'
