Choose statistically significant stock selection models using SAS® Portfolio

and Investment Analysis with SAS®: Financial Modeling Techniques for Optimization is an introduction to using SAS to choose statistically significant stock selection models, create mean-variance efficient portfolios, and aggressively invest to maximize the geometric mean. Based on the pioneering portfolio selection techniques of Harry Markowitz and others, this book shows that maximizing the geometric mean maximizes the utility of final wealth. The authors draw on decades of experience as teachers and practitioners of financial modeling to bridge the gap between theory and application. Using real-world data, the book illustrates the concept of risk-return analysis and explains why intelligent investors prefer stocks over bonds. The authors first

explain how to build expected return models based on expected earnings data, valuation ratios, and past stock price performance using PROC ROBUSTREG. They then show how to construct and manage portfolios by combining the expected return and risk models. Finally, readers learn how to perform hypothesis testing using Bayesian methods to add confidence when data mining from large financial databases.

This textbook is designed as a core text for finance courses that cover market investments, portfolio formation, and the management of investment portfolios. As such, the text seeks to convey insight and actual wisdom as to the nature of these activities. When combined with a commitment to thinking independently, the text offers the student a rigorous preparation for entry to the funds management industry. The text is presented in three parts. In Part A, the text introduces the fundamental techniques of investment analysis: a

"bottom-up" and "top-down" analysis of the firm aimed at an evaluation of the underlying share as a "buy", "hold", or a "sell" recommendation. Part B offers the reader an intuitive grasp of the nature of investment growth, both across time and across assets. Part C introduces the reader to the technicalities of portfolio construction and portfolio management. The text concludes with an assessment of the funds management industry. The text builds in step-by-step stages with Illustrative Examples that consolidate the student's progress and understanding through each chapter. Each of parts A, B, and C (above) has sufficient material to justify a separate course. If the student has exposure to a more foundational course in finance, Parts A and B can be covered as a single

course. If from other courses, the student is familiar with the essence of Parts A and B and with statistical concepts, the text can be covered as a single course. The text can therefore be presented readily at either an undergraduate or postgraduate level at a pace appropriate to the student's prior exposure to the concepts.

"The goal of investment management is to achieve the investor's required rate of return by putting assets to their most productive use. The return should compensate the investor for the time during which the funds are committed, the expected rate of inflation and the uncertainty of the anticipated future financial benefits from the investment.

Investment management is a concise yet comprehensive introduction to investment analysis and portfolio management, specifically in the South African context. Investment management provides a broad framework and a thorough network of guidelines for the investment management student. It focuses on investment in financial assets such as shares and bonds, and explains both fundamental and technical analysis. It investigates portfolio management and how derivative instruments such as futures, options and swaps may be used for this purpose. A chapter is devoted to the foreign exchange market and its management, and a chapter dealing with the governance of investment management is included. By means of

self-assessment questions at the end of each chapter, it prepares undergraduates for postgraduate study and is written with the Chartered Financial Analyst (CFA®) Level I learning outcomes in mind. Investment management is aimed at undergraduate investment management students."--
