Why do we readily dispose of some things, whereas we keep and maintain others for years, despite their obvious wear and tear? Can a greater understanding of aesthetic value lead to a more strategic and sustainable approach to product design? *Aesthetic Sustainability: Product Design and Sustainable Usage* offers guidelines for ways to reduce, rethink, and reform consumption. Its focus on aesthetics adds a new dimension to the creation, as well as the consumption, of sustainable products. The chapters offer innovative ways of working with expressional durability in the design process. *Aesthetic Sustainability: Product Design and Sustainable Usage* is related to emotional durability in the sense that the focus is on the psychological and sensuous bond between subject and object. But the subject-object connection is based on more than emotions: aesthetically sustainable objects continuously add nourishment to human life. This book explores the difference between sentimental value and aesthetic value, and it offers suggestions for operational approaches that can be implemented in the design process to increase aesthetic sustainability. This book also offers a thorough presentation of aesthetics, focusing on the correlation between the philosophical approach to the aesthetic experience and the durable design experience. The book is of interest to students and scholars working in the fields of design, arts, the humanities and social sciences; additionally, it will speak to designers and other professionals with an interest in sustainability and aesthetic value.

Upcycling goes upscale in this beautiful, elegant, and global collection that showcases what today's designers are creating out of yesterday's materials. Upcycling is the process of transforming seemingly low value items into something new. Today's upcyclists are creating stunning furniture, lighting, and art objects that combine values of superb craftsmanship and design with ideas of how "waste" can be both inspiring and informing. While the environmental and financial benefits of upcycling are readily acknowledged in *Upcyclist: Reclaimed and Remade Furniture, Lighting and Interiors*, the designers and makers profiled show how the practice can result in pieces that are as aesthetically exciting as anything created using only raw materials. Based on the author's popular website, this book features hundreds of creations from an international collection of today's most exciting designers. It is organized by material, with chapters dedicated to wood, metal, glass and ceramics, textiles, plastic, paper, and mixed media. Reclaimed tree branches and barn doors are transformed into exquisite pieces of furniture; bicycle chains into chandeliers; t-shirts into rugs; saris into upholstery. Filled with an enormous range of materials and objects, this unique book will inspire any designer or design-conscious consumer to incorporate upcycling into their creative practice or interior design projects.

In an age when we can buy the same bookcase in Sweden, Singapore, and San Francisco, adding individuality to our surroundings is increasingly important. It creates a sense of place, a feel of home. Upcycling sums up today's approach to interiors. It means re-using or re-styling things in an innovative and contemporary way, transforming an older piece of furniture from junk to fabulous. The same idea can even be applied to mass-market modern furniture—through "hacking," you can give it a brand new use or an entirely different look. Both upcycling and hacking are about re-purposing, taking an inexpensive item and re-working it into something special and unique. It's not just about making the most of your budget, although upcycling and hacks will save you money. It's

about having a home that reflects your style and individuality. Sometimes it's just a question of looking at "that old thing" in a different way, such as hanging an empty picture frame on the wall, using a piece of outdoor furniture inside, adding different doors to chain-store fittings, or combining traditional and modern in quirky, individualistic ways.

This book provides a comprehensive overview of the practice of sustainability through a diverse range of case studies spanning across varied fields and areas of expertise. It provides a clear indication as to the contemporary state of sustainability in a time faced by issues such as global climate change, challenges of environmental justice, economic globalization and environmental contamination. The *Palgrave Handbook of Sustainability* explores three broad themes: Environmental Sustainability, Social Sustainability and Economic Sustainability. The authors critically explore these themes and provide insight into their linkages with one another to demonstrate the substantial efforts currently underway to address the sustainability of our planet. This handbook is an important contribution to the best practises on sustainability, drawn from many different examples across the fields of engineering, geology, anthropology, sociology, biology, chemistry and religion.

The production, use and eventual disposal of most clothing is environmentally damaging, and many fashion and textile designers are becoming keen to employ more sustainable strategies in their work. This book provides a practical guide to the ways in which designers are creating fashion with less waste and greater durability. Based on the results of extensive research into lifecycle approaches to sustainable fashion, the book is divided into four sections: source: explores the motivations for the selection of materials for fashion garments and suggests that garments can be made from materials that also assist in the management of textile waste make: discusses the differing approaches to the design and manufacture of sustainable fashion garments that can also provide the opportunity for waste control and minimization use: explores schemes that encourage the consumer to engage in slow fashion consumption last: examines alternative solutions to the predictable fate of most garments - landfill. Illustrated throughout with case studies of best practice from international designers and fashion labels and written in a practical, accessible style, this is a must-have guide for fashion and textile designers and students in their areas.

A manifesto for a radically different philosophy and practice of manufacture and environmentalism "Reduce, reuse, recycle" urge environmentalists; in other words, do more with less in order to minimize damage. But as this provocative, visionary book argues, this approach perpetuates a one-way, "cradle to grave" manufacturing model that dates to the Industrial Revolution and casts off as much as 90 percent of the materials it uses as waste, much of it toxic. Why not challenge the notion that human industry must inevitably damage the natural world? In fact, why not take nature itself as our model? A tree produces thousands of blossoms in order to create another tree, yet we do not consider its abundance wasteful but safe, beautiful, and highly effective; hence, "waste equals food" is the first principle the book sets forth. Products might be designed so that, after their useful life, they provide nourishment for something new—either as "biological nutrients" that safely re-enter the environment or as "technical nutrients" that circulate within closed-loop industrial cycles, without being "downcycled" into low-grade uses (as most "recyclables" now are). Elaborating their principles from experience (re)designing everything from carpeting to corporate campuses, William McDonough and Michael Braungart make an exciting and viable case for change.

Project Report from the year 2015 in the subject Art - Architecture / History of Construction, grade: 12 - Danish equals to A, University College of Northern Denmark (Technology), course: Architectural Technology, language: English, abstract: This research project is concerned with the question what influence and possibilities recycled materials have in building construction and architectural appearance. Material in this case by definition is substance that things are made of. Recycled materials automatically is represented as substances of things that are re-used for other or new purposes. The whole world is compiled out of billions of different materials, some of them are considered to be renewable and some of them unfortunately are unendurable, which leads to the coherent idea that sooner or later the Earth will lose the natural capability to meet human-society needs in terms of amount of existing materials. Most of materials used in building industry are either organic or human-made goods, which for the records, the majority of time are made out at least partly out of organic natural substances, for instance concrete, brick, glass. It has already been about 8 thousands years, how people are building houses which requires a certain amount of materials. With an increasing number of population, the quantity of building supplies gradually raises, which leads to the concern of dwindling natural sources. For that reason, increasing information amount is becoming essential, explaining the possible ways of saving the sources as well as why is it important, what outcomes may or may not possible come if we do or do not take certain actions. Since building industry is one of the dominating existing industries, it undoubtedly pursue to the idea that recycled materials usage into building industry for both construction and design might be one of the key actions to be taken in order to achieve sufficient results within the time and to aim more sustainable self-conscious so
