Sebelumnya, produk perawatan kulit lokal masih belum banyak, tapi saat ini semakin banyak produk skincare lokal yang berdiri dan bisa bersaing dengan produk internasional. Contohnya, produk internasional yang banyak kita lihat saat ini adalah produk-produk skincare yang berasal dari Korea seperti The Face Shop, Tony Moly, Nature Republic, Laneige, Innisfree. Produk perawatan wajah dari Amerika Serikat seperti The Body Shop, Kiehl's, Cetaphil, Olay, Neutrogena. Sedangkan di Indonesia produk perawatan wajah yang paling kuat, contohnya Martha Tilaar, Wardah, Viva yang telah banyak beredar dan berdiri kuat di Indonesia. Namun, dalam (Marketeers & ZAP, 2019) survei yang dilakukan menunjukkan bahwa produk skincare kesukaan wanita Indonesia

The dental curriculum is like a living organism-it has developed through time, manifesting regional, cultural, and scientific heritage, and reflecting modern trends. The undergraduate dental curriculum is periodically rebuilt to ensure the harmonization of higher education systems between countries, especially in Europe. Structure, content, learning, and assessment in undergraduate and postgraduate dental education and auxiliary dental personnel training are shaped based on professional consensus. Constant updates on recent technological innovations and evidence-based best practice are necessary. In modern times, ethical issues are raised more than ever. Can we teach our students how to be dedicated health professionals and manage a successful practice at the same time? Does the commercialization of our profession also affect the dental curriculum today? The COVID-19 pandemic has imposed new challenges, moving us from lecture rooms and clinics to an online environment. This Special Issue is dedicated to developing the understanding of dental education.

Perkembangan teknologi yang semakin pesat dapat dimanfaatkan untuk membantu penyelesaian masalah-masalah. Di bidang kesehatan, penyakit tropis dan degeneratif menjadi perhatian khusus karena prevalensinya yang tinggi di Indonesia. Penyakit Demam Berdarah Dengue (DBD) merupakan salah satu penyakit tropis yang masih menjadi masalah kesehatan dan ancaman serius di sejumlah wilayah di Indonesia. Kementerian Kesehatan mencatat di tahun 2022, jumlah kumulatif kasus Dengue di Indonesia sampai dengan Minggu ke-22 dilaporkan 45.387 kasus. Sementara jumlah kematian akibat DBD mencapai 432 kasus. Penyakit degeneratif juga menyumbang permasalahan kesehatan yang besar di Indonesia. Pada RISKESDAS 2018 bahwa penyakit jantung, diabetes, stroke, dan gagal ginjal menjadi beberapa penyakit degeneratif yang dipantau di Indonesia. Penyelesaian untuk masalah penyakit tropis dan degeneratif di Indonesia dapat ditingkatkan dengan memanfaatkan teknologi yang ada. Pemanfaatan teknologi dapat berupa publikasi dan promosi kesehatan melalui media yang jauh lebih luas, penggunaan perangkat lunak maupun keras yang dapat membantu memantau kondisi pasien, monitoring dan evaluasi penggunaan obat, serta alat-alat diagnosis yang lebih efisien, efektif, dan akurat. Starch is one of the major polysaccharides employed as biopolymers by the food industry, and its wide range of applications has resulted in intense research of starch structure and technology.

Written by an outstanding multidisciplinary team with complementary expertise in both academia and industry, *Starches: Characterization, Properties, and Applications* takes an innovative approach to the trends of starch production. The book provides an up-to-date overview of starch applications in the food, textiles, pharmaceuticals, chemical, agricultural, and plastic industries when used as a substitute for synthetic polymers. Starch nanocomposites properties and starch-based blends biodegradability are also discussed. The book covers the recent advances made in starch characterization using techniques such as atomic force microscopy and nuclear magnetic resonance. It discusses the main modified starches applications and enzymes used on starch industry. It also addresses starch characterization at the granular, macromolecular, and rheological levels. Under the editorial guidance of renowned food scientist, Andréa Curiacos Bertolini, this book to address starch characterization, applications and biodegradation of starch blends, making it an ideal resource for researchers and product developers interested in starch characterization, nanocomposites, and biopolymer degradation.

For the past three decades, we have been steadily creating an extreme 'time-crunch economy' that has affected jobs, portfolios, businesses and lives. But the 'time-crunch economy' is turning into 'the leisure economy' and it will mean wrenching adjustments for our lives and institutions. Everyone from consumers, investors, businesses, and policy-makers will need to understand the changes afoot. The Leisure Economy posits profound economic changes in North America due to both the retirement of the baby boomers and the attitudes of ascendant generations X and Y. Looking at trends in demographics, economics and generational change, this book looks at how to stay ahead of the leisure economy and predicts who will be the winners and losers in the seismic shift ahead.

Poucher's Perfumes Cosmetics and Soaps has been in print since 1923 and is the classic reference work in the field of cosmetics. Now in a fully updated 10th edition, this new volume provides a firm basic knowledge in the science of cosmetics (including toiletries) as well as incorporating the latest trends in scientific applications and legislation which have occurred since the 9th edition. This edition will not only be an excellent reference book for students entering the industry but also for those in specialized research companies, universities and other associated institutions who will be able to gain an overall picture of the modern cosmetic science and industry. The book has been logically ordered into four distinct parts. The historical overview of Part 1 contains an essay demonstrating William Arthur Poucher's influence on the 20th Century cosmetics industry as well as a chapter detailing the long history of cosmetics. Part 2 is a comprehensive listing of the properties and uses of common cosmetic types, ranging from Antiperspirants through to Sunscreen preparations. There are an increased number of raw materials in use today and their chemical, physical and safety benefits are carefully discussed along with formulation examples. The many additions since the last edition demonstrate the dramatic recent expansion in the industry and how changes in legal regulations affecting the development, production and marketing of old, established and new products are operative almost worldwide. Information on specialist products for babies and others is included within individual chapters. The chapters in Part 3 support and outline the current guidelines regarding the assessment and control of safety and stability. This information is presented chemically, physically and microbiologically. Part 3 chapters also detail requirements for the consumer acceptability of both existing and new products. Those legal regulations now in force in the EU, the USA and Japan are carefully described in a separate chapter and the remaining chapters have been extensively updated to explain the technical and practical operations needed to comply with regulations when marketing. This information will be invaluable to European Union and North American companies when preparing legally required product information dossiers. The final chapters in Part 4 contain useful information on the psychology of perfumery as well as detailing methods for the conduct of assessment trials of new products. As ingredient labelling is now an almost universal legal requirement the International Nomenclature of Cosmetics Ingredients (INCI) for raw materials has been used wherever practicable. The advertised volume is the 10th edition of what was previously known as volume 3 of Poucher's Cosmetics and Soaps. Due to changes in the industry there are no plans to bring out new editions of volume 1 and 2.

Intense research has been started all around the world in the past few decades to exploit different agents from natural products as eco-friendly alternative to synthetic and toxic chemicals. Natural products and their derivatives have received increasing attention for their use in many everyday applications ranging from food, medicine, textiles, and healthcare. This new book presents significant research advances about the use of natural products, mainly plant colorants, bioactive compounds and other plant extracts in the textile coloration, food, bioremediation and environmental applications. There are total eight chapters contributed by leading researchers covering the topics such as potential resurgence of natural dyes in applied fields, natural colorants from indigoid plants, phytochemistry of dye yielding plants, irradiation as novel pretreatment methods, dyeing studies with henna plant, phytoremediation of arsenic, and synthesis of curcumin complexes for medicinal and other industrial uses.

#### Introduction To Literature Hal Leonard

Cosmetic science covers the fields from natural sciences to human and social sciences, and is an important interdisciplinary element in various scientific disciplines. New Cosmetic Science is a completely updated comprehensive review of its 35 year old counterpart Cosmetic Science. New Cosmetic Science has been written to give as many people as possible a better understanding of the subject, from scientists and technologists specializing in cosmetic research and manufacturing, to students of cosmetic science, and people with a wide range of interests concerning cosmetics. The relationship between the various disciplines comprising cosmetic science, and cosmetics, is described in Part I. In addition to discussing the safety of cosmetics, the "Usefulness of Cosmetics", rapidly becoming an important theme, is described using research examples. The latest findings on cosmetic stability are presented, as are databases, books and magazines, increasingly used by cosmetic scientists. Part II deals with cosmetics from a usage viewpoint, including skin care cosmetics, makeup cosmetics, hair care cosmetics, fragrances, body cosmetics, and oral care cosmetics. Oral care cosmetics and body cosmetics are presented with product performance, types, main components, prescriptions and manufacturing methods described for each item. This excellent volume enlightens the reader not only on current cosmetics and usage, but indicates future progress enlarging the beneficial effects of cosmetics. Products with better pharmaceutical properties (cosmeceuticals), working both physically and psychologically, are also highlighted.

Ice cream as we recognize it today has been in existence for at least 300 years, though its origins probably go much further back in time. Though no one knows who invented ice cream. The first ice cream making machine was invented by Nancy Johnson, of Philadelphia, in the 1840s. The Science of Ice Cream begins with an introductory chapter on the history of ice cream. Subsequent chapters outline the physical chemistry underlying its manufacture, describe the ingredients and industrial production of ice cream and ice cream products respectively, detail the wide range of different physical and sensory techniques used to measure and assess ice cream, describe its microstructure (i.e. ice crystals, air bubbles, fat droplets and sugar solution), and how this relates to the physical properties and ultimately the texture that you experience when you eat it. Finally, some suggestions are provided for experiments relating to ice cream and ways to make ice cream at home or in a school laboratory. The Science of Ice Cream is ideal for undergraduate food science students as well as for people working in the ice cream industry. It is also accessible to the general reader who has studied science to A level and provides teachers with ideas for using ice cream to illustrate scientific principles.
