LOGAN GAEL

Tow-Truck Pluck CIAT

Thirty-four years have elapsed since the publication of the late Professor P. Maheshwari's text, *An Introduction to the Embryology of Angiosperms*, a work which for many years served as an invaluable guide for students and a rich source book for research workers. Various texts dealing with sections of the broad spectrum of topics encompassed by Maheshwari in his book have appeared in the interim, but a compendious modern work dealing with the whole field has been lacking. This present volume splendidly meets the need, and it is altogether fitting that Professor B. M. Lohri, long an associate and close colleague of Professor Maheshwari and himself a prolific contributor to the subject, should have undertaken the task of editing it. When Maheshwari wrote, it was still feasible for one author to handle the subject, but today even someone with his fine breadth of vision and depth of understanding could not, alone, do it justice. So the effort has to be a collaborative one; and Professor Lohri's achievement has been to bring together a team of authoritative collaborators, assign them their responsibilities, and put them to work to produce a text as integrated in its treatment as the diversity of the subject would allow. The product vividly illustrates the advances that have been made in the study of angiosperm reproductive systems in the last 30 years, and the book is surely destined to become the new standard for student and researcher alike.

Mankind is a child of the cosmos. The atoms in our bodies originate in the interiors of other stars, and we cannot regard our existence separately from the evolution of the universe. Without the Big Bang and the formation of galaxies, planets and organic molecules, we simply would not have happened. In this fascinating book, science journalist Govert Schilling takes the reader on a whirlwind journey through time. He describes the evolution of the cosmos, from the beginning of space and time fourteen billion years ago, to the creation of the Earth and mankind. The book ends with a glance into the distant future of the universe, because the here and now are only fleeting moments in its biography. A combination of compelling text and breathtaking photographs provide an impressive vision of the place of man in the cosmos.

A History of Ideas in Science Education Cambridge University Press

By allowing key scientists, researchers, professors, and classroom teachers of science to speak for themselves through their published writings about what is best and needed for the field, Dr. DeBoer presents a fascinating account of the history of science education in the United States from the middle of the 19th century to the present. The book relates how science first struggled to find a place in the school curriculum and recounts the many debates over the years about what that curriculum should be. In fact, many of what we consider modern ideas in science education are not new at all but can be traced to writings on education of one hundred years ago. The book is aimed at all those interested in science education: classroom teachers and science education leaders concerned about the historical justification of the goals and strategies proposed for the field. The book should be enjoyed not only by the researcher but also by anyone curious about just how curriculum is decided upon and implemented on a national scale. "This is without question the finest book of its kind on the market. It deserves to be widely read by current and future science teachers, supervisors, science education faculty in colleges and universities, curriculum developers, and program officers in funding agencies." —The Science Teacher "Adds a significant dimension to the history of American schooling and curriculum." —History of Education Quarterly

Clinical Biochemistry McGraw-Hill Companies

Includes section "Boekaankondigingen".

Good and Bad Food Science John Wiley & Sons

This book offers a tour of the history of medical virology in the Netherlands from the nineteenth century to the new millennium. Beginning with the discovery of the first virus by Martinus Beijerinck in 1898, the authors investigate the reception and redefinition of his concept in medical circles and its implications for medical practice, particularly in the diagnosis and prevention of viral infections. The relatively slow progress of these areas in

the first half of the twentieth century and their explosive growth in the wake of molecular techniques are examined. The surveillance and control of virus diseases in the field of public health is treated in depth, as are tumour virus research and the important Dutch contributions to technical developments instrumental in advancing virology worldwide. Particular attention is paid to oft forgotten virus research in the former Dutch colonies in the East and West Indies and Africa.

How do accidents and disasters occur? How has knowledge of accident processes evolved? A significant improvement in safety has occurred during the past century, with the number of accidents falling spectacularly within industry, aviation and road traffic. This progress has been gradual in the context of a changing society. The improvements are partly due to a better understanding of the accident processes that ultimately lead to damage. This book shows how contemporary crises instigated the development of safety knowledge and how the safety sciences pieced their theories together by research, by experience and by taking ideas from other domains. From Safety to Safety Science details 150 years of knowledge development in the safety sciences. The authors have rigorously extracted the essence of safety knowledge development from more than 2,500 articles to provide a unique overview and insight into the background and usability of safety theories, as well as modelling how they developed and how they are used today. Extensive appendices and references provide an additional dimension to support further scholarly work in this field. The book is divided into clear time periods to make it an accessible piece of science history that will be invaluable to both new and experienced safety researchers, to safety courses and education, and to learned practitioners.

Nieuwsblad Voor Den Boekhandel Routledge

Passive and active safety systems (ABS, ESP, safety belts, airbags, etc.) represent a major advance in terms of safety in motoring. They are increasingly developed and installed in cars and are beginning to appear in two-wheelers. It is clear that these systems have proven efficient, although there is no information about their actual operation by current users. The authors of this book present a state of the art on safety systems and assistance to driving and their two-wheeled counterparts. The main components constituting a driving simulator are described, followed by a classification of robotic architectures. Then, a literature review on driving simulators and two-wheeled vehicles is presented. The aim of the book is to point out the differences of perspectives between motor vehicles and motorcycles to identify relevant indicators to help in choosing the mechanical architecture of the motorcycle simulator and appropriate controls. Contents 1. Driving Simulation. 2. Architecture of Driving Simulators. 3. Dynamics of Two-Wheeled Vehicles. 4. Two-Wheeled Riding Simulator: From Design to Control.

Evolving Cosmos Routledge

Discovering the meaning of states of consciousness has never been so simple. In this volume we review the main currents of thought that have scientifically studied the stages of consciousness. From the first attempts at definition to empirical studies, up to the implications of physiological psychology and neuroscience. The first part of this guide takes you by the hand and accompanies you in your search for the meaning and purpose of consciousness. From awareness to sleep, from dreams to attentive abilities. The second part of the volume is dedicated to the more everyday and practical aspects, passing from the influence of biological rhythms to relaxation and much more. All this through a simple, fast and essential style of discourse. The book ends with a small self-assessment test that allows the reader to review and fix the main concepts. Forget the thousands of pages long or prohibitively expensive psychology manuals and start exploring how your mind works through a series of guides at unbeatable prices. ### THE COLLECTION ### Psychology made simple is a collection of simple, clear and ready-to-use texts dedicated to the functioning of the human mind, whose lowest common denominator is the practicality and immediacy of its contents. From work contexts to family life, from relationships with others in search of a personal balance, everyone will be able to find answers and satisfy their own desire to know, without going beyond what is necessary to deal with more complex issues.

Incidents involving radiation Penguin

Against the backdrop of unprecedented concern for the future of health care, 'The Cambridge History of Medicine' surveys the rise of medicine in the West from classical times to the present. Covering both the social and scientific history of medicine, this

volume traces the chronology of key developments and events.

Buddhism, with its numerous schools and teachings, can feel daunting. How can one practise Buddhism in a systematic way? Profoundly experienced in Buddhist practice, intimately familiar with its main schools, and founder of the Triratna Buddhist Community, an international movement, Sangharakshita is the ideal guide. In this highly readable, reliable and far-reaching guide, he sorts out fact from myth and theory from practice to reveal the principal ideals and teachings of Buddhism.

Brinkman's cumulatieve catalogus van boeken IGI Global This second edition updates a course which has proven to be a perfect fit for classes the world over. Engaging content and a strong focus on grammar and vocabulary combine to make this course a hit with both teachers and students. Popular course features have been refreshed with new content, including the imaginative reading and listening topics, 'Culture in Mind', and 'Everyday English' sections. New for the second edition is a DVD-ROM with the Level 1 Student's Book containing games, extra exercises and videos featuring the photostories' characters as well as a 'Videoke' record-yourself function. There is a full 'Vocabulary bank' at the back of the book which expands upon lexical sets learned in the units.

Life Saving Skills Manual Peter Owen Publishers

In the words of bestselling author Susan Vreeland, "Renate Dorrestein knows how to chill her readers with tragedy and then melt their hearts with forgiveness." A Heart of Stone is a story of love, fate, and survival that plumbs the undercurrents of family life with passion and skin-prickling suspense. Growing up with her adored siblings in a rambling house in Holland, clever, precocious Ellen has an idyllic childhood suffused with Americana from her parents' news-clipping service—from Coca-Cola to Kissinger to Neil Armstrong's first step on the moon. But amid the happiness lies terror and unimaginable heartbreak and a twelfth birthday that haunts her still. Twenty-five years later, as Ellen tries to make sense of her adulthood, she brilliantly captures her loss and longings and her struggles to dispel the ghosts of her past. "A stunning novel about the scorching legacy of loss."—Time "A striking and finely tuned novel."—The New York Times
