Fundamental Concepts and Skills for Nursing, 6th Edition
prepares students to learn the basic concepts and fundamental skills that LPNs/LVNs need to practice in a number of care settings, including hospitals, long-term care facilities, medical offices, clinics, surgery centres, and home care agencies. This second South Asia Edition of DeWit's Fundamental Concepts and Skills for Nursing is a uniquely featured textbook, designed to make a worthy impact on its readers. The book is customised as per the revised B.Sc. Nursing curriculum prescribed by the Indian Nursing Council (INC) to meet the learning requirements of undergraduate students. Nursing professionals aspiring for higher education or career progression will also find this book useful for reference. The full-colour text contains theoretical nursing concepts, step-by-step skills and procedures, and clinical applications to build a strong foundation in the patient care experience. The underlying framework of all the chapters pivots around the nursing process, and also portrays the concepts like psycho-social aspects, critical thinking, communication skills, inter-professional collaborations, patient-family education and cultural integrity. • Discusses more than 80 essential skills and around 30 petite forms of skills with step-by-step format supported with coloured illustrations along with action/rationale format • Each chapter starts with key terms, objectives and has supportive glossary • Enhanced with stimulating highpoints such as Special Clinical Cues, Cultural Considerations, Lifespan Considerations, Focused Assessment, Health Promotion, Legal & Ethical Considerations, Patient Education, QSEN Considerations, Safety Alert and Think Critically boxes • Includes nursing process framework featuring the application of the nursing process and nursing care plans, reinforcing its application in the clinical setting • More than 20 Nursing Care Plans illustrating each step of the nursing process • Includes Concept Maps that help students visualise concepts addressed in the text and learn how a condition or response (relating to symptoms, treatments, and side effects) can affect more than one body system

This book presents a comprehensive review of both theories and research on the dynamic nature of human judgment and decision making (JDM). Leading researchers in the fields of JDM, cognitive development, human learning and neuroscience discuss short-term and long-term changes in JDM skills. The authors consider how such skills increase and decline on a developmental scale in children, adolescents and the elderly; how they may be learned; and how JDM skills can be improved and aided. In addition, beyond these behavioral approaches to understanding JDM as a skill, the book provides fascinating new insights from recent evolutionary and neuropsychological approaches. The authors identify opportunities for future research on the acquisition and changing nature of JDM. In a concluding chapter, eminent past presidents of the Society for Judgment and Decision Making provide personal reflections and perspectives on the notion of JDM as a dynamic skill.

For Future Leaders in Safety and Engineering You've chosen to become a leader in occupational health and safety. Practical Leadership Skills for Safety Professionals and Project Engineers can show you how. Purposely oriented toward the art and science of leadership, this book is designed to provide insight and outline development techniques for the budding young professional. Aimed squarely at college students and early career professionals, it parallels the steps that a student or recent graduate needs to take (from pre-professional to professional); it moves the reader from the classroom and then on through to early managerial years. The book covers basic office protocol and etiquette, understanding diversity and cultural nuance, and ethical considerations, and addresses most ABET-accredited engineering and safety programs with similar curricula. It also considers special cases that include toxic leadership; environmental stressors; increasing resilience; gender issues; international nuance; experiential training; and "depleted" leader development environments where upper management doesn't seem to care. In addition, the author introduces stories, accumulated wisdom, and anecdotes from his own experience, balanced by supported research and data on outcomes. Part empirical, part anecdotal, this book: Cites current social and psychological work on leadership and professional development References industry-related leader development research Breaks

down what being a "professional" means; codes of ethics; dilemmas; case studies Explores leadership in the crisis and non-crisis modes Offers help with identifying and fighting toxic leadership, and more Designed for both coursework and reference, Practical Leadership Skills for Safety Professionals and Project Engineers contains published research combined with the author's own industry experience. This book provides a blueprint for the undergraduate or early-career professional in occupational health and safety, industrial hygiene, safety management, and related industries.

A Practical and Concise Manual of the Procedure of the Chancery Division of the High Court of Justice, Both in Actions and Matters
Jones & Bartlett Publishers

Featuring an evidence- and strengths-based approach to practice methods, this new text teaches students how to apply social work skills in a variety of settings. Designed to enhance self-awareness, professionalism, ethical reasoning, cultural sensitivity, and an appreciation for social justice issues, this text introduces readers to social work's core values and practice methods to help them assimilate the skills needed for working in the field. Cases and skills-based exercises demonstrate how to make accurate assessments and design effective intervention plans. After laying the groundwork in theory, values, and ethics, the authors review methods for working with individuals, children, and families from an individual and environmental strengths-based perspective. Client engagement, assessment, intervention, evaluation and termination, and documentation are then reviewed. Readers are introduced to the foundational concepts of social work practice and through application learn to successfully work with clients. Key Features Integrates the Council on Social Work Education's EPAS standards and core competencies throughout, including engagement, assessment, intervention, evaluation, social justice, ethics, critical thinking, professional conduct and decision making, and cultural competency and diversity. Case scenarios in client interview format that closely resemble actual interactions, followed by questions, test readers' understanding of the practice skills needed to work in the field. Skill-building exercises including individual and group activities, role plays, simulations, and discussion questions that provide an opportunity to apply one's knowledge and skill sets. Personal reflections that encourage students to examine their own beliefs to help them assimilate social work ethics and values into their professional demeanor. Icons throughout the text that draw attention to useful tips for developing direct practice skills. A strengths-based approach that heightens understanding and results in a higher level of proficiency in the change process. Introduces challenging situations often encountered in practice to help readers acquire the more advanced practice skills necessary for assessment and intervention. Resources including PowerPoints, test questions, sample syllabi, and suggested answers to text exercises and discussion questions.

This book develops a sociological understanding of law making in the European Union. In particular, the book focuses on the social function of law in new governance structures promoting decentralized and flexible procedures that encourage deliberation, participation of stakeholders, and public dialogue. It pays attention to both the practical knowledge and the power relations underpinning law making, while seeking to bring to the foreground the importance of compromise in the process. The empirical substantiation of the argument discusses the regulation of technology in the European Union and is premised on case studies of governance of the Internet, patents of high technology, filters used on the Internet to block harmful material, trademark law and domain name dispute resolution by ICANN. To this effect, the book studies the dynamics of constructing a legal argument inside the European Commission, and its role in the process of coordinating the creation of networks, securing enforcement in self regulatory regimes, and steering activity on the part of autonomous groups of actors.

Chemical education is essential to everybody because it deals with ideas that play major roles in personal, social, and economic decisions. This book is based on three principles: that all aspects of chemical education should be associated with research; that the development of opportunities for chemical education should be both a continuous process and be linked to research; and that the professional development of all those associated with chemical education should make extensive and diverse use of that research. It is intended for: pre-service and practising chemistry teachers and lecturers; chemistry teacher educators; chemical education researchers; the designers and managers of formal chemical curricula; informal chemical educators; authors of textbooks and curriculum support materials; practising chemists and chemical technologists. It addresses: the relation between chemistry and chemical education; curricula for chemical education; teaching and learning about chemical compounds and chemical change; the development of teachers; the development of chemical education as a field of enquiry. This is mainly done in respect of the full range of formal education contexts (schools, universities, vocational colleges) but also in respect of informal education contexts (books, science centres and museums).
