Demystifying consciousness: how subjective experience can be explained by natural brain and evolutionary processes. Consciousness is often considered a mystery. How can the seemingly immaterial experience of consciousness be explained by the material neurons of the brain? There seems to be an unbridgeable gap between understanding the brain as an objectively observed biological organ and accounting for the subjective experiences that come from the brain (and life processes). In this book, Todd Feinberg and Jon Mallatt attempt to demystify consciousness—to naturalize it, by explaining that the subjective, experiencing aspects of consciousness are created by natural brain processes that evolved in natural ways. Although subjective experience is unique in nature, they argue, it is not necessarily mysterious. We need not invoke the unknown or unknowable to explain its creation. Feinberg and Mallatt flesh out their theory of neurobiological naturalism (after John Searle's biological naturalism) that recognizes the many features that brains share with other living things, lists the neural features unique to conscious brains, and explains the subjective-objective barrier naturally. They investigate common neural features among the diverse groups of animals that have primary consciousness—the type of consciousness that experiences both sensations received from the world and affects such as emotions. They map the evolutionary development of consciousness and find an uninterrupted progression over time, without inserting any mysterious forces or exotic physics. Finally, bridging the previously unbridgeable, they show how subjective experience, although different from objective observation, can be naturally explained.

Legal Research Demystified offers a real-world approach to legal research for first-year law students. The book guides students through eight steps to research common law issues and ten steps to research statutory issues. It breaks down the research steps and process into "bite-size" pieces for novice researchers, minimizing the frustration often associated with learning new skills. This text also gives students context, explaining why and when a source or finding tool should be used when researching the law. The process of legal research, of course, is not linear. This book constantly reminds students of the recursive nature of legal research, and it identifies specific situations when they may deviate from the research steps. Through the book's step-by-step approach, students will connect seemingly unrelated tools (e.g., citators and the Key Number System) and understand how to leverage them to answer legal questions. Every chapter includes charts, diagrams, and screen captures to illustrate the research steps and finding methods. Each chapter concludes with a "summary of key points" section that reinforces important concepts from the chapter. This book provides students and professors with multiple assessment tools. Each chapter ends with true-false and multiple-choice questions that test students' understanding of chapter content. These questions are replicated on the book's companion website, Core Knowledge. Students may answer these end-of-chapter questions, as well as more advanced questions, on Core Knowledge and receive immediate feedback, including an explanation of why the answer is correct or incorrect. Professors can generate reports to track students' performance. Based on students' performance, professors will know whether to review a topic in more detail or to move to the next topic. (New books contain an access code to Core Knowledge; students purchasing used books can buy an access code separately.) Core Knowledge offers yet another assessment tool: interactive research exercises. These online exercises walk students through the research steps on Westlaw and Lexis Advance, giving professors the option to "flip" the classroom. Through many screen captures and tips, students can navigate both research platforms outside of class, allowing students and professors to dig deeper into the material during class. Each research exercise simulates a real-world research experience and contains self-grading questions. For example, in one exercise, students research on Westlaw to determine whether the client could recover damages against a neighbor for the emotional distress for the death of the client's dog. To answer the client's question, students must complete the research steps, including finding and reviewing secondary sources on Westlaw, using the Key Number System and KeyCite, and performing keyword searches. Professor support materials include a Teacher's Manual, sample syllabi, and sample research exams.
