This study is the first attempt to reconstruct the prehistory of Arabic by examining lexical evidence of its symbiotic relationship with Ancient Egyptian already apparent from the Pyramid Texts (c. 2613-2181 BC). It documents the contention that Ancient Egypt was a strategic site in its early prehistory.

This book covers various aspects of New Chinese Migration in Suriname in the 1990s and early 2000s. It is an ethnography of New Chinese Migrants in the context of South- South migration, but also a first ethnography of Chinese in Suriname, as well as an analysis of Surinamese ethnic discourse and ethnopolitics.

Starting in the 1990s, renewed immigration from China changed the dynamics of the Surinamese Chinese community, which developed from a Hakka enclave to a culturally and linguistically diverse, modern Chinese migrant group. Local positioning strategies of Chinese had always depended on ethnic entrepreneurship and political participation, but were now complicated by anti-immigrant sentiments.

Germany's acceptance of its direct responsibility for the Holocaust has strengthened its relationship with Israel and has led to a deep commitment to combat antisemitism and rebuild Jewish life in Germany. As we draw close to a time when there will be no more firsthand experience of the horrors of the Holocaust, there is great concern about what will happen when

German responsibility turns into history. Will the present taboo against open antisemitism be lifted as collective memory fades? There are alarming signs of the rise of the far right, which includes blatantly antisemitic elements, already visible in public discourse. The evidence is unmistakable—overt antisemitism is dramatically increasing once more. The Future of the German-Jewish Past deals with the formidable challenges created by these developments. It is conceptualized to offer a variety of perspectives and views on the question of the future of the German-Jewish past. The volume addresses topics such as antisemitism, Holocaust memory, historiography, and political issues relating to the future relationship between Jews, Israel, and Germany. While the central focus of this volume is Germany, the implications go beyond the German-Jewish experience and relate to some of the broader challenges facing modern societies today.

Amidst the innumerable articles and books on plastic and reconstructive surgery, a thorough and extensive study of the history of free skin grafting was still missing. This omission has now been rectified by Dr. Klasen. This book is an expansion of a M.D. thesis, written at the State University of Groningen, The Netherlands, and was guided by Professor A.J.C. Huffstadt, plastic surgeon, and Professor D. de Moulin, medical historian. Professor T. Gibson kindly revised the manuscript and wrote the epilogue. But, as Goethe put it: "nur ein Teil der Kunst kann gelehrt werden, der Künstler macht das Ganze" ("only a part of the art can be taught, the artist makes the totality"). The author, Henk Klasen, is a remarkable man. As a general surgeon, he devotes all his interest and skills to traumatology and problems of physiology and pathophysiology in surgery. With such talents it is natural that he also works parttime as one of the coordinators of a modern burn unit. Among his hobbies are love of antiques and old books. This historical inclination has induced him to write the present book, in which he vividly describes the development of free skin grafting in its relevant theoretical and practical aspects. His elaborate study has resulted in an excellent reference book which at the same time provides enjoyable reading, once again demonstrating the value of history in understanding the present. A.J.C. HUFFSTADT, M.D.

This open access book examines the significance of gay neighborhoods (or 'gayborhoods') from critical periods of formation during the gay liberation and freedom movements of the 1960s and 1970s, to proven durability through the HIV/AIDS pandemic during the 1980s and 1990s, to a mature plateau since 2000. The book provides a framework for contemplating the future form and function of gay neighborhoods. Social and cultural shifts within gay neighborhoods are used as a framework for understanding the decades-long struggle for LGBTQ+ rights and equality. Resulting from gentrification, weakening social stigma, and enhanced rights for LGBTQ+ people, gay neighborhoods have recently become "less gay," following a 50-year period of resilience. Meanwhile, other neighborhoods are becoming "more gay," due to changing preferences of LGBTQ+ individuals and a propensity for LGBTQ+ families to form community in areas away from established gayborhoods. The current 'plateau' in the evolution of gay neighborhoods is characterized by generational differences—between Baby Boom pioneers and Millennials who favour broad inclusivity—signaling various possible trajectories for the future 'afterlife' of these important LGBTQ+ urban spaces. The complicating impacts of the COVID-19 pandemic provides a point of comparison for lessons learned from gay neighborhoods and the LGBTQ+ community that bravely endured the onset of the HIV/AIDS pandemic. This book will be of interest to students and scholars in various disciplines—including sociology, social work, anthropology, gender and sexuality, LGBTQ+ and queer studies, as well as urban geography, architecture, and city planning—and to policymakers and advocates concerned with LGBTQ+ rights and social justice.

Despite various poststructuralist rejections of the idea of a singular author-genius, the question of a textual archetype that can be assigned to a named author is still a common scholarly phantasm. The Romantic idea that an author created a text or even a work autonomously is transferred even to pre-modern literature today. This ignores the fact that the transmission of medieval and early modern literature creates variances that could not be justified by means of singular authorships. The present volume offers new theoretical approaches from English, German, and Scandinavian studies to provide a historically more adequate approach to the question of authorship in premodern literary cultures. Authorship is no longer equated with an extra-textual entity, but is instead considered a narratological, inner- and intertextual function that can be recognized in the retrospectively established beginnings of literature as well as in the medial transformation of texts during the early days of printing. The volume is aimed at interested scholars of all philologies, especially those dealing with the Middle Ages or Early Modern Period.

Monsieur Perdu can prescribe the perfect book for a broken heart. But can he fix his own? Monsieur Perdu calls himself a literary apothecary. From his floating bookstore in a barge on the Seine, he prescribes novels for the hardships of life. Using his intuitive feel for the exact book a reader needs, Perdu mends broken

hearts and souls. The only person he can't seem to heal through literature is himself; he's still haunted by heartbreak after his great love disappeared. She left him with only a letter, which he has never opened. After Perdu is finally tempted to read the letter, he hauls anchor and departs on a mission to the south of France, hoping to make peace with his loss and discover the end of the story. Joined by a bestselling but blocked author and a lovelorn Italian chef, Perdu travels along the country's rivers, dispensing his wisdom and his books, showing that the literary world can take the human soul on a journey to heal itself. Internationally bestselling and filled with warmth and adventure, *The Little Paris Bookshop* is a love letter to books, meant for anyone who believes in the power of stories to shape people's lives.

SAMT North Atlantic Books

At first sight it may appear strange that a volume of *Progress in Pediatric Surgery* should be devoted to the history of our specialty. One assumes that progress is concerned primarily with recent developments whilst history deals with matters of the past. However, in the past there has also been considerable progress in the development of our understanding of paediatric surgical problems, otherwise we would not have progressed to our present achievements. The editors, therefore, do not apologize for compiling this volume but, on the contrary, feel that the publication of this volume is most timely. Modern paediatric surgery has now been practised for three generations. The handful of pioneers who were the founders of our specialty worked mainly before the last world war. A few dozen of the intermediary generation started work immediately after the war, while the new generation who are now dominating our specialty must be counted in thousands. Two factors have radically altered paediatric surgery as practised by the intermediary and the present generation of surgeons.

[deutsch-englisches Wörterbuch: Deutsch-Englisch](#) Lorenz Books Adamorobe, a small Akan village in Ghana, has an unusually high incidence of hereditary deafness. As a result, a sign language came into being, Adamorobe Sign Language (AdaSL), which is unrelated to any other sign language described so far and is assumed to be about 200 years old. The present study describes selected aspects of AdaSL, notably phonology, lexicon, the expression of size and shape and the encoding of motion events. A comparison of these aspects with descriptions of other sign languages reveals interesting cross-linguistic differences in the use of iconicity as well as in the use of space and classifier constructions. Data were collected during three periods of fieldwork of nine months in total. Moreover, this study considers to what extent the social setting may influence the development of structural features in sign languages. This investigation nuances the impact the visual-spatial modality has on sign language structure. The book is of interest to scholars of sign linguistics, African linguistics, as well as contact linguistics and Deaf studies.

Prepared to live at your prime? Integrative neurologist Dr. Kulreet Chaudhary discovered a beautiful side effect to the eating and lifestyle tools she gave her brain patients--spontaneously shedding excess pounds. In this, her first book, she shows us how to sharpen the brain, and smarten and heal the gut. Weight gain is not about the food, but about the body's environment. Excess weight is a result of the body being in a toxic, inflammatory state. If your body is not prepared or 'primed' for weight loss, you will fight an uphill biochemical battle. Her program is not about what you can't have or do, it's about adding simple teas and herbs, and succeeding without giving up any foods you love. With The Prime, Dr. Chaudhary has reverse engineered our way of eating, so we can stop dieting backward and start losing weight instead. You'll learn: --The importance of neuroadaptation, food addiction, and the brain (or, why your brain and gut have made it so hard to lose weight in the past!) --Why it's not about what you eat, but what you digest --How to determine if you have a Leaky Brain—and what The Prime can do about it (hint: everything) --How to easily crush cravings (no willpower required), ignite energy and fat, and biohack your lifestyle habits. Lastly, you'll learn how to live fully Primed, the secrets of the Super-Primed, and when you're ready to explore new foods, how to eat according to your unique constitution.

CT afferents are receptors in mammalian hairy skin that fire action potentials when the skin is touched lightly which makes them particularly important in affective touch. Traditionally neuroscientific research has focused on more discriminative and haptic properties of touch that are mediated by large myelinated afferents and the coding properties and functional organization of unmyelinated CT afferents have been studied much less. The proposed volume will draw together existing knowledge in this nascent field. Separate sections will address (1) how we can measure affective touch, (2) CT structure and physiology, (3) CT processing, (4) the contribution of CTs to sexual behavior, (5) clinical relevance, (6) commercial relevance, and (7) future research considerations.
