Tumaini: A Journey of Hope in the Heart of Africa Strategic Book Publishing
 When they prepare for medical school, few candidates take the time to acquire the caliber of recommendation letters they will need to distinguish themselves in a highly competitive applicant pool. This book, which was written by an Ivy League admissions expert, offers detailed advice to write (and get) persuasive letters that highlight the personal, academic and professional strengths the committee expects to see. It also includes 45 successful recommendation letters, including several that "explain" extenuating circumstances in a candidate's history (such as disappointing grades, a gap in employment, and low MCAT scores). At top medical schools, where the competition is fierce, the quality and depth of a candidate's reference letters can make the difference between acceptance and rejection. Whether you are an applicant who needs a persuasive

letter of recommendation, or someone who has been asked to write one, this exceptional book is mandatory reading. **Essentials of Clinical Laboratory Science** Longman Publishing Group
 Seasoned classroom veterans, pre-tenured faculty, and neophyte teaching assistants alike will find this book invaluable. HHMI Professor Jo Handelsman and her colleagues at the Wisconsin Program for Scientific Teaching (WPST) have distilled key findings from education, learning, and cognitive psychology and translated them into six chapters of digestible research points and practical classroom examples. The recommendations have been tried and tested in the National Academies Summer Institute on Undergraduate Education in Biology and through the WPST. Scientific Teaching is not a prescription for better teaching. Rather, it encourages the reader to approach teaching in a way that captures the spirit and rigor of scientific research and to contribute to transforming how students learn science.

Everyday Arguments combines a practical, student-oriented argument rhetoric with an anthology of illustrative readings drawn from arguments of everyday life. The rhetoric portion of the text contains a four-part taxonomy and guides students through the process of generating, drafting, composing, and revising written arguments. The anthology of readings is closely tied to the principles and practices introduced in the rhetoric section.

Throughout the text, the author emphasizes that much can be learned about written argument and its practice from the texts we encounter on a daily basis. Writing-intensive exercises in each chapter encourage students to practice new skills as they learn them, while refreshing their knowledge of previously mastered skills. These exercises emphasize the value of collaboration, revision, and responsible research. Helpful student samples encourage students in their own writing.

Many girls want to become scientists when they grow up, just like many boys do. But for these girls, the struggle to do what they love and to be treated with respect

has been much harder because of the discrimination and bias in our society. In *Women in Microbiology*, we meet women who, despite these obstacles and against tough odds, have become scientific leaders and revered mentors. The women profiled in this collection range from historic figures like Alice Catherine Evans and Ruth Ella Moore to modern heroes like Michele Swanson and Katrina Forest. What binds all of these remarkable women are a passion for their work, a zest for life, a warm devotion to mentoring others—especially younger women—and a sense of justice and fairness that they are willing to fight tirelessly to obtain. Each story is unique, but each woman featured in *Women in Microbiology* has done so much to expand our knowledge of the natural world while also making it easier for the next generation of scientists to work collaboratively and in an atmosphere where people are judged by their intellect, imagination, skill, and commitment to service regardless of gender or race. *Women in Microbiology* is a wonderful collection of stories that will inspire everyone, but especially young women and men who are wondering how to find

their way in the working world. Some of the names are familiar and some are lesser known, but all of the stories arouse a sense of excitement, driven by tales of new, important scientific insights, stories of overcoming adversity and breaking boundaries, and the inclusion of personal tips and advice from successful careers. These stories are proof that a person can live a balanced and passionate life in science that is rich and rewarding.

A Guide to Academia is a handbook for all those individuals thinking seriously about going to graduate school. Written by an author with extensive experience navigating the academic world, the book explains all the steps and potential bumps in the road that a student might encounter as they take the plunge into academia. Each chapter begins with a section called the "hard truth," which will help students determine if they are on the right path. Starting with an undergraduate student looking for a graduate school, the reader is taken on a journey up the academic ladder through graduate studies, a postdoctoral fellowship and an assistant professorship.

Each chapter gives advice on not only how to survive the current stage but how to get to the next stage quickly. Enhanced with material from the author's own job applications and interview presentations, *A Guide to Academia* provides concrete examples of the tools needed for a successful career in academia.
