LONG LAWRENCE

Publications Wilfrid Laurier Univ. Press

This handbook provides a comprehensive and thorough survey of our current insights into the diversity and unity found across the 6000 languages of this planet. The 125 articles include inter alia chapters on the patterns and limits of variation manifested by analogous structures, constructions and linguistic devices across languages (e.g. word order, tense and aspect, inflection, color terms and syllable structure). Other chapters cover the history, methodology and the theory of typology, as well as the relationship between language typology and other disciplines. The authors of the individual sections and chapters are for the most part internationally known experts on the relevant topics. The vast majority of the articles are written in English, some in French or German. The handbook is not only intended for the expert in the fields of typology and language universals, but for all of those interested in linguistics. It is specifically addressed to all those who specialize in individual languages, providing basic orientation for their analysis and placing each language within the space of what is possible and common in the languages of the world.

Amour et Raison - L'Appel de l'Enfance Walter de Gruyter

Writing in English, German, or French, more than 300 authors provide a historical description of the beginnings and of the early and subsequent development of thinking about language and languages within the relevant historical context. The gradually emerging institutions concerned with the study, organisation, documentation, and distribution are considered as well as those dealing with the utilisation of language related knowledge. Special emphasis has been placed on related disciplines, such as rhetoric, the philosophy of language, cognitive psychology, logic and neurological science.

Language Typology and Language Universals / Sprachtypologie und sprachliche Universalien / La typologie des langues et les universaux linguistiques. 1. Halbband Editions Eyrolles

Henry O. Pollak Chairman of the International Program Committee Bell Laboratories Murray Hill, New Jersey, USA The Fourth International Congress on Mathematics Education was held in Berkeley, California, USA, August 10-16, 1980. Previous Congresses were held in Lyons in 1969, Exeter in 1972, and Karlsruhe in 1976. Attendance at Berkeley was about 1800 full and 500 associate members from about 90 countries; at least half of these come from outside of North America. About 450 persons participated in the program either as speakers or as presiders; approximately 40 percent of these came from the U.S. or Canada. There were four plenary addresses; they were delivered by Hans Freudenthal on major problems of mathematics education, Hermina Sinclair on the relationship between the learning of language and of mathematics, Seymour Papert on the computer as carrier of mathematical culture, and Hua Loo-Keng on popularising and applying mathematical methods. George Polya was the honorary president of the Congress; illness prevented his planned attendance but he sent a brief presentation entitled, "Mathematics Improves the Mind". There was a full program of speakers, panelists, debates, miniconferences, and meetings of working and study groups. In addition, 18 major projects from around the world were invited to make presentations, and various groups representing special areas of concern had the opportunity to meet and to plan their future activities.

A l'heure du numérique et du développement des contenus éditoriaux des entreprises et des marques (mini-films, storytelling, web radio, TV...), la qualité de l'expression, des

contenus et des langages font la différence : Pourquoi et comment argumenter ? Quel est l'intérêt d'une charte sémantique ? Comment définir un langage de marque ? Comment mettre en cohérence l'oral et l'écrit ? Quel langage à l'heure du storytelling ? Y a-t-il un langage spécifique pour les journalistes ? ... Autant d'enjeux nouveaux, de questions parfois difficiles qui s'imposent aux dirigeants d'entreprises, directeurs marketing, responsables de communication, directeurs des ressources humaines. Cet ouvrage leur apporte des réponses illustrées, de nombreux exemples, des témoignages de professionnels, des tableaux de synthèse et des conseils pratiques. "Nous devons maintenir une véritable relation de personne à personne." Patrick Ropert, directeur de la communication du groupe SNCF.

178 exercices corrigés pour maîtriser le langage C++ Conçu pour les étudiants en informatique (DUT, licence, master, écoles d'ingénieur), ce recueil d'exercices corrigés et commentés est le complément idéal de Programmer en langage C++ du même auteur ou de tout autre ouvrage d'initiation au langage C++. L'ouvrage propose 178 exercices pour mieux assimiler la syntaxe de base du langage (types et opérateurs, instructions de contrôle, fonctions, tableaux, pointeurs...) et les concepts objet du C++. Les exercices vous permettront de vous forger une véritable méthodologie de conception de vos propres classes C++. Vous saurez notamment décider du bien-fondé de la surdéfinition de l'opérateur d'affectation ou du constructeur par copie, tirer parti de l'héritage (simple ou multiple), créer vos propres bibliothèques de classes, exploiter les possibilités offertes par les patrons de fonctions et de classes, etc. Cette 4e édition inclut 20 nouveaux exercices portant notamment sur les pointeurs intelligents et sur la nouvelle sémantique de déplacement introduits par les versions C++11 et C++14 de la norme. Chaque chapitre débute par un rappel de cours suivi de plusieurs exercices de difficulté croissante. Les corrigés sont tous présentés suivant le même canevas : analyse détaillée du problème, solution sous forme de programme avec exemple de résultat d'exécution, justification des choix opérés - car il n'y a jamais de solution unique à un problème donné ! - et, si besoin, commentaires sur les points délicats et suggestions sur les extensions possibles du programme. Le code source des corrigés est fourni sur le site www.editions-eyrolles.com.

Apprenez rapidement et simplement les bases du langage C. **Nouvelles leçons sur la science du langage: Phonétique et étymologie: 2. Influence du langage sur la pensée mythologie ancienne et moderne** Walter de Gruyter
What are families like in contemporary France? And what begins to emerge when we consider them from the point of view of recent theoretical perspectives: (faulty) cohesion, (fake) coherence, (carefully planned or subversive) deconstruction, loss (of love, confidence or credibility), or, even (utter) chaos and (alarming) confusion? Which media revamp old stereotypes, generate alternative reinterpretations, and imply more ambiguous answers? ...]Uneasy contradictions and ambiguities emerge in this bilingual collection of approaches and genre studies. The family plot seems to thicken as family ties appear to loosen. Has the family' been lost from sight, or is it being reinvented in our collective imaginary? This book proposes a new series of perspectives and questions on an old and familiar' topic, exploring the state and status of the family in contemporary literature, culture, critical and psychoanalytic theory and sociology.

Automating Linguistics offers an in-depth study of the history of the mathematisation and automation of the sciences of language. In the wake of the first mathematisation of the 1930s, two waves followed: machine translation in the 1950s and the development of computational linguistics and natural language processing in the 1960s. These waves were pivotal given the work of large computerised corpora in the 1990s and the unprecedented technological development of computers and software. Early machine translation was devised as a war technology originating in the sciences of war, amidst the amalgamate of mathematics, physics, logics, neurosciences, acoustics, and emerging sciences such as cybernetics and information theory. Machine translation was intended to provide mass translations for strategic purposes during the Cold War. Linguistics, in turn, did not belong to the sciences of war, and played a minor role in the pioneering projects of machine translation. Comparing the two trends, the present book reveals how the sciences of language gradually integrated the technologies of computing and software, resulting in the second-wave mathematisation of the study of language, which may be called mathematisation-automation. The integration took on various shapes contingent upon cultural and linguistic traditions (USA, ex-USSR, Great Britain and France). By contrast, working with large corpora in the 1990s, though enabled by unprecedented development of computing and software, was primarily a continuation of traditional approaches in the sciences of language sciences, such as the study of spoken and written texts, lexicography, and statistical studies of vocabulary.

Ministère de Talleyrand Sous Le Directoire New York? : s.n. Linda Hutcheon, in this original study, examines the modes, forms and techniques of narcissistic fiction, that is, fiction which includes within itself some sort of commentary on its own narrative and/or linguistic nature. Her analysis is further extended to discuss the implications of such a development for both the theory of the novel and reading theory. Having placed this phenomenon in its historical context Linda Hutcheon uses the insights of various reader-response theories to explore the "paradox" created by metafiction: the reader is, at the same time, co-creator of the self-reflexive text and distanced from it because of its very self-reflexiveness. She illustrates her analysis through the works of novelists such as Fowles, Barth, Nabokov, Calvino, Borges, Carpentier, and Aquin. For the paperback edition of this important book a preface has been added which examines developments since first publication. Narcissistic Narrative was selected by Choice as one of the outstanding academic books for 1981-1982.
