Deterrence is the most basic concept in American foreign policy today. But past practice indicates it often fails to work - and may increase the risk of war. Psychology and Deterrence reveals this stratgy's hidden and generally simplistic assumptions about the nature of power and aggression, threat and response, and calculation and behavior in the international arena. Most current analysis, the authors, note, ignore decisionmakers' emotions, preceptions, and domestic political needs, assuming instead that people repond to crisis in highly rational ways. Examining the historical evidence from a psychological perspective, Psychology and Deterrence offers case studies on the origins of World War I, the 1973 Arab-Israeli conflict, and the Falklands Wars as seen by the most important participants. These case studies reveal

national leaders to be both more cautious and more reckless than theory would predict. They also show how deterrence strategies often backfire by aggravating a nation's sense of insecurity, thereby calling forth the very behavior they seek to prevent. The authors' conclusions offer important insights for superpower bargaining and nuclear deterrence.

Doing well with money isn't necessarily about what you know. It's about how you behave. And behavior is hard to teach, even to really smart people. Money—investing, personal finance, and business decisions—is typically taught as a math-based field, where data and formulas tell us exactly what to do. But in the real world people don't make financial decisions on a spreadsheet. They make them at the dinner table, or in a meeting room, where personal history, your own unique view of the world, ego, pride, marketing, and odd incentives are scrambled together. In *The Psychology of Money*, award-winning author Morgan Housel shares 19 short stories exploring the

strange ways people think about money and teaches you how to make better sense of one of life's most important topics.
