HATFIELD CONRAD

A Treatise on the Art of Weaving, with Calculations and Tables for the Use of Manufacturers. Illustrated by Engravings Hardpress Publishing

Textile Mechanics and Calculations is written with exhaustive information on the mechanical elements used in power transmission and textile equipment and machines. For the first time, an attempt has been made to include all the theoretical data for each topic with solved numerical examples. The special feature of this book is the inclusion of a number of cams and tappets and stepped pulley construction found in engineering and textile applications. The book also has the displacement, velocity and acceleration diagrams with textile examples. In addition to mechanics of spinning, the book also has details of the mechanics of the weaving process with several derivations. *Textile Calculations* Hansebooks

YARN COUNTS AND CALCULATIONS. Originally published in 1921. ONE of the first essential or desirable requirements in the preparation and spinning of yarn, as well as in the subsequent operations of cloth structure and weaving, is an adequate knowledge of the subject of Yarn Counts and of Calculations relating thereto. This treatise, gives consideration to many different fibres, and to yarns made from them, by an elucidation of twenty-two different systems of counting yarns as practised in the various districts of the United Kingdom, on the Continent, and in America. The value of the work is that it not only provides the textile student of any branch with practically all that is required to prepare him for his examinations, but also acts as a reference book for spinners, manufacturers, and merchants. Many of the earliest books on weaving, textiles and needlework, particularly those dating back to the 1900s and before, are now extremely scarce and increasingly expensive. Excerpt from *Textile Calculations: Being a Guide to Calculations Relating to the Construction of All Kinds of Yarns and Fabrics, the Analysis of Cloth, Speed, Power and Belt Calculations* Commencing with the steam cylinder of the engine, we have ascertained the exact requirements necessary for a lubricating oil to reduce the coefficient of friction on all classes of textile machinery to the lowest possible minimum, thereby effecting for our customers a large saving in fuel and repairs. We have studied the best and most economical oils for oiling wool, softening cotton, counteracting the effect of harsh dyes, etc. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. This early work on Weaving was originally published in 1831, The

egyptians were the first civilized people of whom there are any authentic records, and to them the neighbouring nations were chiefly indebted for their knowledge in the arts and sciences: among which was the art of weaving, especially of fine linen, for which there were widely famed. This is a comprehensive and informative look at the subject and will appeal to any historian. Many of the earliest books, particularly those dating back to the 1900's and before, are now extremely scarce and increasingly expensive. We are republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.

Excerpt from *Weaving Calculations: A Guide to Calculations Relating to Cotton Yarn and Cloth and All Processes of Cotton Weaving* The author has endeavoured to 'provide a book of calculations, and not of descriptive explanation Of machinery. For this the reader is referred to various books Of his and other authorship. It has been borne in mind that such a book as the present one will have many readers among the younger members Of the trade, and therefore the explanations and examples have been given at some length, and with as great simplicity as possible. For this reason intricate explanations, such as necessitate algebraical and other of the deeper classes Of mathematics, have been avoided, for such are only passed over by the practical manufacturer, who desires simplicity and clearness, and which tend to encourage the common opinion, formed not without reason, that technical education in some directions tends too much towards theory. TEXTILE CALCULATIONS Nabu Press

Textile Calculation: Fibre to Finished Garment provides detailed explanations of standard numerical calculations used at different stages of garment production, including spinning, weaving, processing, garmenting and testing. At every stage, from fiber production to garment manufacturing, textile production involves the selection of fibers or filaments, yarns, machines and process parameters. The calculations involved in this work relate to

requirements of machines in the process line, estimations of process parameters, process characteristics, and machine efficiency, all of which must be objective and backed by sound theory. Drawing on extensive industry experience, this book gathers these numerical problems from across the supply chain to provide best practice and appropriate solutions. With its comprehensive coverage of all parts of the textile production cycle, this book is essential reading for those preparing to enter the textile industry, as well as an invaluable reference for professionals and researchers. Provides a complete overview of the manufacturing process of yarns and garments, as well as introductory material on the building elements of garments. Includes detailed descriptions of industry testing methods for yarns, fibers and garments. Explains calculation methodologies from across the textile production process.

A Treatise on the Art of Weaving with Calculations and Tables for the Use of Manufacturers. Illustrated by Engravings Legare Street Press

Excerpt from A Practical Treatise on Weaving and Designing of d104ile Fabrics: With Chapters on the Principles of Construction of the Loom, Calculations and Colour The manufacture Of worsted is supposed by some to have preceded that of woollen, and in support of this the writer Of the article in Rees' Cyclopaedia says the long stapled wool suited to the comb seems more spontaneously the produce Of uncultivated sheep than short wool, which is to be manufactured by carding. Some writers suppose the Argali species to be the original sheep. Prof. Archer says, The fact that the sheep has been so long domesticated, has caused it to be a matter Of uncertainty whether it has been derived from any Of the existing animals Of the genus 0712's. Many have entertained the opinion that it is the same animal as the Argali, 0722's Ammon, Linn., a native of the mountains of Central Asia, and a great weight of evidence in favour Of that supposition is obtained from the circumstance, that all the tribes Of people who have from time immemorial dwelt on the plains surrounding those mountains have always been pastoral in their habits and occupations. Still, however, there is no positive proof that our sheep was derived either from the Argali or any other known wild species, and the probability has been much lessened by the recent discoveries Of the remains Of sheep, mingled with stone weapons of a people who existed under such different conditions Of the earth's surface, that we may assume with as

much probability that they were the progenitors Of the Asiatics, as that the latter were their ancestors. And Dr. Carpenter, in his Zoology, says the Argali is not the original sheep.
