The volume collects
papers presented at the
International Conference
"Greek Medical Papyri -
Text, Context, Hypertext"

held at the University of
Parma on November 2-4,
2016, as the final event of
the ERC project
DIGMEDTEXT, aimed
primarily at creating an

online textual database of the Greek papyri dealing with medicine. The contributions, authored by outstanding papyrologists and historians of the ancient medicine, deal with a variety of topics focused on the papyrological evidence of ancient medical texts and contexts. The first part, devoted to "medical texts", contains some new reflections on important sources such as the Anonymus Londinensis and the Hippocratic corpus, as well as on specific themes like the

pharmacological vocabulary, the official medical reports, the medical care in the Roman army. The second part collects papers about the "doctors' context", providing highlights from broader viewpoints like the analysis of the writing supports, the study of the ostraka from the Eastern Desert, the evidence of inscriptions and philosophical texts. The third part is entirely focused on the DIGMEDTEXT project itself: the team members present some relevant

key issues raised by the digitisation of the medical papyri.

This volume explores the themes of authorship and authenticity – and connected issues – from the Classical Antiquity to the Renaissance. Its reflection is constructed within a threefold framework. A first section includes topics dealing with dubious or uncertain attribution of ancient works, homonymous writers, and problems

regarding the reliability of compilation literature. The middle section goes through several issues concerning authorship: the balance between the author's contribution to their own work and the role of collaborators, pupils, circles, reviewers, scribes, and even older sources, but also the influence of different compositional stages on the concept of 'author', and the challenges presented by anonymous texts. Finally, a third crucial section on authenticity and forgeries

concludes the book: it contains contributions dealing with spurious works - or sections of works - , mechanisms of interpolation, misattribution, and deliberate forgery. The aim of the book is therefore to exemplify the many nuances of the complex problems of authenticity and authorship of ancient texts.

The ongoing digitisation of the literary papyri (and related technical texts like the medical papyri) is leading to new thoughts on the concept and shape of the "digital critical edition" of ancient documents. First of all,

there is the need of representing any textual and paratextual feature as much as possible, and of encoding them in a semantic markup that is very different from a traditional critical edition, based on the mere display of information. Moreover, several new tools allow us to reconsider not only the linguistic dimension of the ancient texts (from exploiting the potentialities of linguistic annotation to a full consideration of language variation as a key to socio-cultural analysis),

but also the very concept of philological variation (replacing the mono-authorial view of an reconstructed archetype with a dynamic multitextual model closer to the fluid aspect of the textual transmission). The contributors, experts in the application of digital strategies to the papyrological research, face these issues from their own viewpoints, not without glimpses on parallel fields like Egyptology and Near Eastern studies. The result is a new, original

and cross-disciplinary overview of a key issue in the digital humanities.

The leading elements in this volume are the cultural representation of birth and the forms through which its narration and representation develop in the figurative arts, through historical references, mythological tales and legends, traditions, customs and habits. The influence of myth, language and artistic expression on our cultural representation of procreation is manifest, and this way of “narrating” birth resists

even today, although it comes into conflict with a more scientific vision of pregnancy and childbirth. With this book we believe we have contributed to an in-depth examination of illness narratives, thus favouring the search for a convergence between medical language in the sector and the language of cultural experience so that evidence-based medicine does not clash with narrative-based medicine, but that the two languages come together towards a reciprocity that will strengthen the

alliance between
physician and patient.

[Greek Medical Papyri](#) Walter de Gruyter GmbH & Co KG Building on Calvino's observations on

Exactitude in Six Memos for the Next Millennium, the present book elucidates on the possible definitions of exactitude, the endeavor of reaching exactitude, and the undeniable limits to the achievement of this ambitious milestone. The eighteen essays in this interdisciplinary volume show how ancient and medieval authors have been dealing with the problem of exactitude vs. inexactitude and have been able to exploit the ambiguities related to these two concepts to

various ends. The articles focus on rhetoric and historiography (section I), exact sciences and technical disciplines (II), the peculiarity of quotations (III), cases of programmatic inexactitude (IV) and textual transmission (V). Several interconnected questions weave a net across the volume: to what extent is exactitude the goal in ancient and medieval texts? How can the concepts of accuracy and inaccuracy aid the reinterpretation of an already known text or

fact? To what extent can certain definitions of exactitude be stretched, without turning into inexactitude? The volume presents an extensive study capable of highlighting the shrewdness and aptness of the concepts introduced by Calvino more than thirty years ago.

 In the first book systematically to give evidence of conjugal co-rule at an Italian Renaissance court, and the first full length scholarly study of Isabella

d'Este and Francesco Gonzaga, Sarah Cockram shows their relationship in an entirely new light. The book draws on (and presents) a large amount of unpublished archival material, including almost unprecedented surviving correspondence between and around these Renaissance princely rulers. Using these sources, Cockram shows Isabella and Francesco's strategic teamwork in action, illuminating tactics of collaboration and dissimulation. She also reveals behind-the-scenes

diplomatic activity; court procedures; sexual politics and seduction; gift-giving and network-building; rivalries, intrigues and assassinations. Several epistolary themes emerge: insights into the couple's communication practices and double-dealing, their use of intermediaries, and attention to security matters. This book's analysis of Isabella's co-rule with her husband, supported by other members of the Gonzaga dynasty, sees her

sometimes in the role of subordinate partner, sometimes guiding the couple's actions. It shows how, despite appearances at times, the couple shared common diplomatic policy as well as human, material, and cultural resources; joint administration; and the exercise of authority and justice. Thus emerges a three-dimensional picture of the mechanisms of power and power sharing in the age of Machiavelli. *Index-catalogue of the Library of the Surgeon-General's Office, United*
