American aliyah (immigration to Palestine) began in the mid-nineteenth century fueled by the desire of Americans Jews to study Torah and by their wish to live and be buried in the Holy Land. This movement of people -- men and women increased between World War I and II, in direct contrast to the European Jewry's desire to immigrate to the United States. Why would American Jews want to leave America, and what characterized their resettlement? From New Zion to Old Zion analyzes the migration of American Jews to Palestine between the two World Wars and explores the contribution of these settlers to the building of Palestine. Joseph B. Glass details the scope and scale of this migration, outlines the characteristics of the immigrants, and constructs profiles of four distinct immigrant groups -- orthodox, middle-class agriculturists, urban professionals, and halutzim (pioneers). Glass studies the motivational factors for emigration from the United States, sources of information and available resources required for settlement, and the political barriers to migration. He examines the activities of the American Zion Commonwealth and its purchase and development of land in Palestine, as well as the settlement initiatives of various American companies and ahuzas societies. Glass explores the role of individual men and women in urban and rural settlement on privately purchased and Jewish National Fund land. From New Zion to Old Zion

draws upon international archival correspondence, newspapers, maps, photographs, interviews, and fieldwork to provide students and scholars of immigration and settlement processes, the Yishuv (Jewish community in Palestine), and American-Holy Land studies a well-researched portrait of aliyah.

Theory and Construction of a Rational Heat Motor Wiley-Interscience

This is the extraordinary story of Knight and Lomas's fourteen year quest to uncover the secret teachings buried beneath Roslin Chapel near Edinburgh. Their quest ends with extraordinary revelations about early human history - the origins of Christianity, of Freemasonry and of science. They show that all were charged with a belief in a secret cosmic code, linking, for example, the Exodus from Egypt, the founding of Solomon's Temple and the Star of Bethlehem. This book reveals for the first time why there were such high expectations of a Messiah at the time of the birth of Jesus Christ. The Book of Hiram will change everything you thought you knew about both the Bible and Freemasonry.

Aline Leon´ In the last years, public attention was increasingly shifted by the media and world governments to the concepts of saving energy, reducing pollution, protecting the environment, and developing long-term energy supply solutions. In parallel, research funding relating to alternative fuels and energy carriers is increasing on both national and international levels. Why has future energy supply become such a matter of concern? The reasons are the problems created by the world's current energy supply system which is mainly based on fossil fuels. In fact, the energy stored in hydrocarbon-based solid, liquid, and gaseous fuels was, is, and will be widely consumed for internal combustion engine-based transportation, for electricity and heat generation in residential and industrial sectors, and for the production of fertilizers in agriculture, as it is convenient, abundant, and cheap. However, such a widespread use of fossil fuels by a constantly growing world population (from 2.3 billion in 1939 to 6.5 billion in 2006) gives rise to the two problems of oil supply and environmental degradation. The problem related to oil supply is caused by the fact that fossil fuels are not renewable primary energy sources: This means that since the first barrel of petroleum has been pumped out from the ground, we have been exhausting a heritage given by nature.

Yet the scale and rate of defence procurement frequently seemed to be more than and beyond what the nation required for modernization on the one hand and security on the other. Nor did there seem to be any great defence logic in what appeared to be a continuing nuclear weapon programme.
