Action research is now a well-documented and well-accepted research methodology. Moreover, it is especially appropriate in new media research, where innovation and change are continual, and where processes and outcomes are usually not predictable and often involve fuzzy and subjective human elements. This book offers a systematic, in-depth academic overview of the application of action research methods to the field of new media. In this space, it is the first publication of its kind in what is a new but rapidly growing field. The book is

divided into two sections. Introducing the two key concepts, namely, new media and action research, the first section describes the underlying principles, processes, questions, methods and tools that are relevant to an action research approach to new media inquiry. This is followed by a deeper exploration of three advanced, innovative approaches to action research and new media: ethnographic, network, and anticipatory action research. The third and final section presents four case studies and their individual applications of action research in different new media contexts.

Case Study Methodology in Higher Education SAGE "The concept of embodiment, or the lived experience of the body, has become an important focus of scholarly attention across psychology, sociology, philosophy, and cultural studies. Addressing the inherent challenges of researching the lived experience of the body,

this edited volume brings together experienced scholars who conduct and teach embodied research to and establish effective strategies for exploring experience through nonverbal communication, subjective sensory and proprioceptive states, and body-centered imagery. It represents a thorough and comprehensive resource for students conducting research using an embodied approach and for instructors that teach embodied inquiry"-- Encyclopedia of Case Study Research: L - Z Educreation Publishing The use of case studies to build and test theories in political science and the other social sciences has increased in recent years. Many scholars have argued that the social sciences rely too heavily on quantitative research and formal models and have attempted to develop and refine rigorous methods for using case studies. This text presents a comprehensive analysis of research methods using case studies and examines the place of case studies in social science methodology. It argues that case studies, statistical methods, and formal models are

complementary rather than competitive. The book explains how to design case study research that will produce results useful to policymakers and emphasizes the importance of developing policy-relevant theories. It offers three major contributions to case study methodology: an emphasis on the importance of within-case analysis, a detailed discussion of process tracing, and development of the concept of typological theories. *Case Studies and Theory Development in the Social Sciences* will be particularly useful to graduate students and scholars in social science methodology and the philosophy of science, as well as to those designing new research projects, and will contribute greatly to the broader debate about scientific methods.
