Additive Manufacturing (AM), more popularly known as 3D printing, is transforming the industry. AM of metal components with virtually no geometric limitations has enabled new product design options and opportunities, increased product performance, shorter cycle time in part production, total cost reduction, shortened lead time, improved material efficiency, more sustainable products and processes, full circularity in the economy, and new revenue streams. This Special Issue of Metals gives an up-to-date account of the state of the art in AM. *BA Escape Repair Manual* Coffee House Press

"Universal Methods of Design is an immensely useful survey of research and design methods used by today's top practitioners, and will serve as a crucial reference for any designer grappling with really big problems. This book has a place on every designer's bookshelf, including yours!" —David Sherwin, Principal Designer at frog and author of *Creative Workshop: 80 Challenges to Sharpen Your Design Skills* "Universal Methods of Design is a landmark method book for the field of design. This tidy text compiles and summarizes 100 of the most widely applicable and effective methods of design—research, analysis, and ideation—the methods that every graduate of a design program should know, and every professional designer should employ. Methods are concisely presented, accompanied by information about the origin of the technique, key

research supporting the method, and visual examples. Want to know about Card Sorting, or the Elito Method? What about Think-Aloud Protocols? This book has them all and more in readily digestible form. The authors have taken away our excuse for not using the right method for the job, and in so doing have elevated its readers and the field of design. UMOD is an essential resource for designers of all levels and specializations, and should be one of the go-to reference tools found in every designer's toolbox." —William Lidwell, author of *Universal Principles of Design*, Lecturer of Industrial Design, University of Houston This comprehensive reference provides a thorough and critical presentation of 100 research methods, synthesis/analysis techniques, and research deliverables for human centered design, delivered in a concise and accessible format perfect for designers, educators, and students. Whether research is already an integral part of a practice or curriculum, or whether it has been unfortunately avoided due to perceived limitations of time, knowledge, or resources, *Universal Methods of Design* serves as an invaluable compendium of methods that can be easily referenced and utilized by cross-disciplinary teams in nearly any design project. This essential guide: - Dismantles the myth that user research methods are complicated, expensive, and time-consuming - Creates a shared meaning for cross-disciplinary design teams - Illustrates methods with compelling visualizations and case studies - Characterizes each method at a glance - Indicates when methods are best employed to help prioritize appropriate design research strategies *Universal Methods of Design* distills each method down to its most powerful essence, in a format that will help design teams select and implement the most credible research methods best suited to their design culture within the constraints of their projects.

This third edition of *Metal Powders: A Global Survey of Production, Applications and Markets* has been completely revised and updated to include information

available up to mid-June 2000. The main purpose of the report is to review the manufacture, applications and markets for the metal and alloy powders of most commercial significance. As a result, the bulk of the report deals with ferrous powders (iron and steel, stainless steels and high alloy tool steels). Most of the non-ferrous metals and alloys are also reviewed, including aluminium, copper, nickel, cobalt, and the refractory metals tungsten and molybdenum. For a PDF version of the report please call Tina Enright on +44 (0) 1865 843008 for price details.

A theoretically informed investigation that relates the philosophies of aesthetics and imagination to understanding design practice. In *The Aesthetics of Imagination in Design*, Mads Folkmann investigates design in both material and immaterial terms. Design objects, Folkmann argues, will always be dual phenomena—material and immaterial, sensual and conceptual, actual and possible. Drawing on formal theories of aesthetics and the phenomenology of imagination, he seeks to answer fundamental questions about what design is and how it works that are often ignored in academic research. Folkmann considers three conditions in design: the possible, the aesthetic, and the imagination. Imagination is a central formative power behind the creation and the life of design objects; aesthetics describes the sensual, conceptual, and contextual codes through which design objects communicate; the concept of the possible—the enabling of new uses, conceptions, and perceptions—lies behind imagination and aesthetics. The possible, Folkmann argues, is contained as a structure of meaning within the objects of design, which act as part of our interface with the world. Taking a largely phenomenological perspective that reflects both continental and American pragmatist approaches, Folkmann also makes use of discourses that range from practice-focused accounts of design methodology to cultural studies. Throughout, he offers concrete examples to illustrate theoretical points. Folkmann's

philosophically informed account shows design—in all its manifestations, from physical products to principles of organization—to be an essential medium for the articulation and transformation of culture.

Since the industrial revolution, progress has meant an increase in labour productivity. Factor Four describes a new form of progress, resource productivity, a form which meets the overriding imperative for the future (sustainability). It shows how at least four times as much wealth can be extracted from the resources we use. As the authors put it, the book is about doing more with less, but this is not the same as doing less, doing worse or doing without. In 1972, the Club of Rome published *Limits to Growth*, which sent shock waves around the world by arguing that we were rapidly running out of essential resources. This Report to the Club of Rome offers a solution. It lies in using resources more efficiently, in ways which can already be achieved, not at a cost, but at a profit. The book contains a wealth of examples of revolutionizing productivity, in the use of energy; from hypercars to low-energy beef; materials, from sub-surface drip irrigation to electronic books, transport, video conferencing to CyberTran, and demonstrating how much more could be generated from much less today. It explains how markets can be organized and taxes re-based to eliminate perverse incentives and reward efficiency, so wealth can grow while consumption does not. The benefits are enormous: profits will increase, pollution and waste will decrease and the quality of life will improve. Moreover, the benefits will be shared: progress will no longer depend on making ever fewer people more productive. Instead, more people and fewer resources can be employed. While for many developing countries the efficiency revolution may offer the only realistic chance of prosperity within a reasonable time span. The practical promise held out in this book is huge, but the authors show how it is up to each of us, as well as to businesses and governments, to make it happen.

This book sheds light on the development of the cold spray process in applications of additive manufacturing (AM) and repair/remanufacturing engineering. It covers the process fundamentals of different cold spray techniques, namely low pressure cold spray and high pressure cold spray process. Bonding mechanism and powder substrate interface are an important part of the book. The chapters present the recent developments in materials used in cold spraying for AM and various coating applications. The latest research in this area as well as possible avenues of future research are also highlighted as a way to encourage the researchers.

Oxford English for Information Technology is a course for students of information technology and computing, or for people already working in the IT sector. It is suitable for use in universities, technical schools and on adult education programmes, with students at intermediate to advanced level who want to improve and extend their language skills in the context of IT. This second edition has been carefully and selectively revised to take account of recent developments in this fast-moving sector, and to ensure that the material is up to date. The new material reflects changes in such as technical specifications, new technologies, and working practices. The glossary has also been updated.

Praise for Chloe Caldwell: "I read it a couple of months ago in one can't-put-it-down-even-though-it's-the-middle-of-the-night sitting. It's as intense and interesting and clear-hearted as they come."—Cheryl Strayed "I'll read anything Chloe Caldwell writes. She's a rare bird: fearless, dark, prolific, unpretentious, and truly

honest."—Elisa Albert "Nothing's sexier than first love and first intimacies, and Caldwell's brave autobiographical tale twists the trope into a powerful story about unexpectedly falling in love with a woman and the discoveries, sexual and otherwise, that ensue."—Time Out New York "The essays in this collection are as exuberant as they are sad. Her storytelling is as vulnerable as it is bombastic. These essays roll in gangsta, but wear freshly picked daisies in their hair."—Rookie Magazine Flailing in jobs, failing at love, getting addicted and un-addicted to people, food, and drugs—I'll Tell You in Person is a disarmingly frank account of attempts at adulthood and all the less than perfect ways we get there. Caldwell has an unsparing knack for looking within and reporting back what's really there, rather than what she'd like you to see. Chloe Caldwell is the author of the novella *Women*, and the essay collection *Legs Get Led Astray*. Her work has appeared in the *Sun*, *Salon*, *VICE*, *Hobart*, *Nylon*, the *Rumpus*, *Men's Health*, and *LENNY*, among others. She teaches personal essay and memoir writing in New York City and lives in Hudson.

Lance Out Loud Springer Science & Business Media

Lance Loud came to represent the gay community, and in addition, embodied the creative spirit and genius of outsider status that became the 1980s and fuelled so much of what has evolved today in our culture in terms of art, music and literature. In 2003, PBS broadcast the program, *Lance Loud: A Death in an American Family*, which was filmed in 2001 while visiting the family again, at the invitation of Lance before his death at age 50. As seen here, short as Lance's life was, it was a monumental one that continues to resonate to the present day.
