Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy. Accordingly, at the request of the Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care systems that are designed to work for everyone. The Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-focused care into 2030. This work builds on the foundation set out by The Future of Nursing: Leading Change, Advancing Health (2011) report. *The Future of Nursing 2020-2030* National Academies Press Pass the NCLEX-PN! "This 5th edition is an important achievement; it is a symbol of commitment to the field of palliative nursing, where we have been and where we are going." - Betty Rolling Ferrell, PhD, MA, FAAN, FPCN, CHPN From the Foreword The aging population has only grown since the first edition of this comprehensive and seminal publication nearly 20 years ago. Based on the need to humanize rather than medicalize the illness experience for patients, this text delves into palliative care beyond the specific diseases affecting the patient. Instead, content focuses on the whole person and family. Palliative patients struggle with chronic, debilitating, and painful conditions, and grapple with the fact that life as they knew it has already passed away. Families and friends reciprocally suffer, not knowing how to help and therefore become the secondary victims of the disease. This is not the challenge of a lone nurse, or a single physician, therapist, or social worker. Rather, palliative and hospice care requires the expertise and unique roles of an interprofessional team to help the patient and family strengthen their resilience, continue to find meaning and purpose in life, and cure what can be cured. Palliative Care Nursing, Fifth Edition, delivers advanced empirical, aesthetic, ethical and personal knowledge. This new edition brings an increased focus on outcomes, benchmarking progress, and goals of care. It expounds upon the importance of the cross-disciplinary collaboration introduced in the previous edition. Every chapter in Sections I, II, and III includes content written by a non-nursing member of the interprofessional team. Based on best-evidence and clinical practice guidelines, this text presents comprehensive, targeted interventions responsive to the needs of palliative and hospice patients and family. Each chapter contains compassionate, timely, appropriate, and cost-effective care for diverse populations across the illness trajectory. Key Features The expanded new edition offers current, comprehensive,

Strengthening Research Capacity and Disseminating New Findings in Nursing and Public Health Springer

While vast numbers of nurses across the globe contribute in all areas of healthcare delivery from primary care to acute and long-term care in community settings, there are significant differences in how they are educated, as well as the precise nature of their practice. This comprehensive handbook provides a research-informed and international perspective on the critical issues in contemporary nurse education. As an applied discipline, nursing is implemented differently depending on the social, political and cultural climate in any given context. These factors impact on education, as much as on practice, and are reflected in debates around the value of accredited programmes, and on-the-job training, apprenticeship, undergraduate and postgraduate pathways into nursing. Engaging with these debates amongst others, the authors collected here discuss how, through careful design and delivery of nursing curricula, nurses can be prepared to understand complex care processes, complex healthcare technologies, complex patient needs and responses to therapeutic interventions, and complex organizations. The book discusses historical perspectives on how nurses should be educated; contemporary issues facing educators; teaching and learning strategies; the politics of nurse education; education for advanced nursing practice; global approaches; and educating for the future. Bringing together leading authorities from across the world to reflect on past, present and future approaches to nurse education and nursing pedagogy, this handbook provides a cutting-edge overview for all educators, researchers and policy-makers concerned

with nurse education.
