From networks to databases, email to voicemail, the amount of capital being invested in information technology each year is staggering. By 1996, U.S. firms were spending more than \$500 billion annually on software, networks and staff. The recently merged Bank of America and NationsBank have an initial IT budget of 4 billion dollars. As firms like this push rapidly into the business world of the 21st century, the question has remained: how do firms measure returns from these substantial investments in information technology? Henry C. Lucas, effectively answers this question by providing a creative and reliable framework for measuring the competitive advantages and profits gained through investments in state-of-the-art information systems. There is value in information technology, and it is possible to show returns, Lucas argues--unfortunately this value just doesn't always show up clearly on the bottom line of a ledger. In five expertly presented sections, he spells out exactly what businesses can expect from their information technology investments--some investments create a measurable value, some do not, but all are important nonetheless. Through a precise mix of frameworks and models, such as an Investment Opportunities Matrix, and punctuated with real examples from successful firms, this is the first book to allow executives to see exactly how their information technology investment can be expected to return value, thereby maximizing their advantages in an age of global competitiveness. Indeed, firms who manage their information systems most efficiently are best suited to succeed in a rapidly evolving marketplace. With so much at stake, Information Technology is certain to be the essential guide for firms determined to compete and flourish in the highly competitive economy of the next century.

Excerpt from *A Critic and a Certificate of Character* I am writing you about a subject we are interested in as long time citizens of Wisconsin, that is its historical records. The Historical Society of Wisconsin has singularly failed of its purpose. It has been appropriated millions of dollars by the state, and while it never has done much in writing up the history of the state, it has in the last three years given up state history entirely and published numerous works on the history of Virginia, the Ohio river region, and Lewis and Clark expedition up the Missouri River. It has in preparation other works on the same subject, and in addition proposes to add books on the Gold Seekers of California and numerous works on Kentucky, Virginia, and Pittsburg. 'Engineering padicha nalla future - If you study engineering, you will have a good future.' This is a claim often repeated to children and teenagers by parents and teachers in many parts of India. But only those who have gone through an engineering college life know that it's not completely true. There is a difference between calling yourself as an engineering graduate and an engineer. India produces millions of engineering graduates like you and me but only very few of us are actual engineers. Many of us just graduate with an engineering degree, with an artistic dream in mind. What do you think is the difference between engineers in many countries around the world and engineers from India? In other countries, if David Pascal studied electrical engineering in college, few years later you can find him working as an electrical engineer. In India, if Ram Krishnamurthy studied electrical engineering, few years later you can find him working in a completely irrelevant field like software coding, banking, photography and even movie directing. This book is not about the few engineering students in your class who love engineering. I don't hate them. In fact, I am very jealous that they study what they love. This book is about the majority of engineering graduates whose lives are wasted in engineering and is intended to tell you why you should make an attempt in pursuing your real passion, instead of being suffocated under the weight of an engineering degree. This is a story of India's Youth. Welcome to India, the land of Wasted Engineers.

"In the case *Hunt v. Arnold*, Barbara Hunt, Myra Dinsmore, and Iris Welch won a groundbreaking federal injunction against the all-white Georgia State College in downtown Atlanta. In contrast to the widespread coverage of the University of Georgia case, the plaintiffs in this case, along with local activists involved in the case and the court victory itself, have been overlooked in civil rights history. Sahir Ludhianvi is probably the only songwriter in Hindi films whose poetry was accepted in its purest form and incorporated as a film song. So great was his stature as an Urdu poet that he never had to mould his poetry to suit the demands of film songwriting; instead, producers and composers adapted their requirements to his poetry. His songs in films like Pyaasa, Naya Daur and Phir Subah Hogi have attained the status of classics. This exhaustive biography traces the poet's rich life, from his troubled childhood and his equally troubled love relationships, to his rise as one of the pre-eminent personalities of the Progressive Writers Movement and his journey as lyricist through the golden era of Hindi film music, the 1950s and 1960s.
