This play takes a crate of gift stamps, a

Montreal kitchen, and 15 women, and mixing fast-moving dialogue, monologue and chorus, produces a critique of "women's place", Quebec society, and modern consumerism.

 ABRAMS

This volume is the newest release in the authoritative series of quantitative estimates of nutrient intakes to be used for planning and assessing diets for healthy people. Dietary Reference Intakes (DRIs) is the newest framework for an expanded approach developed by U.S. and Canadian scientists. This book discusses in detail the role of vitamin C, vitamin E, selenium, and the carotenoids

in human physiology and health. For each nutrient the committee presents what is known about how it functions in the human body, which factors may affect how it works, and how the nutrient may be related to chronic disease.

Dietary Reference Intakes provides reference intakes, such as Recommended Dietary Allowances (RDAs), for use in planning nutritionally adequate diets for different groups based on age and gender, along with a new reference intake, the Tolerable Upper Intake Level (UL), designed to assist an individual in knowing how much is "too much" of a nutrient.

Abridged Index Medicus National Academies Press

Qu'est-ce qui peut inciter sept générations de Blanchet à choisir un

métier triste à mourir aux yeux du commun des mortels? Quelles sont leurs motivations fondamentales? La morosité ou la vitalité? L'appât du gain ou un souci insatiable de servir le prochain? Le respect de la tradition ou le goût du risque? La routine ou le désir de variété? La facilité ou les défis? Ou encore, au-delà des perceptions, est-ce la passion pour une profession vieille comme le monde et indispensable aux êtres humains?

Draft Environmental Impact Report: Comments and responses. Letter 1 through letter 124 Francis Cairns

Publications

Advances in artificial intelligence (AI) highlight the potential of this technology to affect productivity, growth, inequality, market power, innovation, and employment. This volume seeks to set the agenda for economic research on the

impact of AI. It covers four broad themes: AI as a general purpose technology; the relationships between AI, growth, jobs, and inequality; regulatory responses to changes brought on by AI; and the effects of AI on the way economic research is conducted. It explores the economic influence of machine learning, the branch of computational statistics that has driven much of the recent excitement around AI, as well as the economic impact of robotics and automation and the potential economic consequences of a still-hypothetical artificial general intelligence. The volume provides frameworks for understanding the economic impact of AI and identifies a number of open research questions. Contributors: Daron Acemoglu,
