Event Marketing in the Context of Higher Education Marketing and Digital Environments Pearson Education

Assessment really does matter in higher education. Internationally, academics - and those who support them - are seeking better ways to assess students, recognizing that diverse methods are available which may solve many of the problems associated with the evaluation of learning. *Assessment Matters in Higher Education* provides both theoretical perspectives and pragmatic advice on how to conduct effective assessment. It draws

clearly on both relevant research and on its contributors' practical first hand experience (warts and all!). It asks, for example: * how can assessment methods best become an integral part of learning? * what strategies can be used to make assessment fairer, more consistent and more efficient? * how effective are innovative approaches to assessment, and in what contexts do they prosper? * to what extent can students become involved in their own assessment? * how can we best assess learning in professional practice contexts? This is an important resource for all academics and academic managers involved in assessing their students.

The Hanoverian Dimension in British History, 1714-1837 Klett / Kallmeyer

Tonality and Transformation is a groundbreaking study in the analysis of tonal music. Focusing on the listener's experience, author Steven Rings employs transformational music theory to illuminate diverse aspects of tonal hearing - from the infusion of sounding pitches with familiar tonal qualities to sensations of directedness and attraction. In the process, Rings introduces a host of new analytical techniques for the study of the tonal repertory, demonstrating their application in vivid interpretive set pieces on music from Bach to Mahler. The analyses place the book's novel techniques in dialogue with existing tonal methodologies, such as Schenkerian theory, avoiding partisan debate in favor of a methodologically careful, pluralistic

approach. Rings also engages neo-Riemannian theory—a popular branch of transformational thought focused on chromatic harmony—reanimating its basic operations with tonal dynamism and bringing them into closer rapprochement with traditional tonal concepts. Written in a direct and engaging style, with lively prose and plain-English descriptions of all technical ideas, *Tonality and Transformation* balances theoretical substance with accessibility: it will appeal to both specialists and non-specialists. It is a particularly attractive volume for those new to transformational theory: in addition to its original theoretical content, the book offers an excellent introduction to transformational thought, including a chapter that outlines the theory's conceptual foundations and formal apparatus, as well as a glossary of common technical terms. A contribution to our understanding of tonal phenomenology and a landmark in the analytical application of transformational techniques, *Tonality and Transformation* is an indispensable work of music theory.

Modern Engine Technology Springer
A gripping YA sci-fi thriller by German and

Spiegel-bestselling author, Karl Olsberg. *The Boy in a White Room* was nominated for Deutscher Jugendliteraturpreis 2018, Germany's most prestigious youth fiction award. A fifteen-year-old boy wakes to find himself locked in a white, cube-shaped room. No windows. No doors. Total silence. He has no memories. No clue how he got there. No idea who he is. A computer-generated voice named Alice responds to his questions. Through her, he is able to access the internet. As the boy uncovers snippets of his story -- an attempted abduction, a critical injury, a murder -- it becomes clearer. But when some of the pieces don't fit, how can he tell what's real and what's not? Who can he trust? And who is he really?

In this book, the world's foremost experts on pricing integrate theoretical rigor and practical application to present a comprehensive resource that covers all areas of the field. This volume brings together quantitative and qualitative approaches and highlights the most current innovations in theory and practice. Going beyond the traditional constraints of "price theory" and "price policy," the authors coined the term "price management" to represent a holistic approach to pricing strategy and tactical implementation. They remind us that the Ancient Romans used one word, *pretium*, to mean both price and value. This is the fundamental philosophy that drives successful price management where producer and customer meet. Featuring dozens of examples and case studies drawn from their extensive research, consulting, and teaching around the world, Simon and Fassnacht cover all aspects of pricing following the price management process with its four phases: strategy,

analysis, decision, and implementation. Thereby, the authors take into account the nuances across industry sectors, including consumer goods, industrial products, services, and trade/distribution. In particular, they address the implications of technological advancements, such as the Internet and new measurement and sensor technologies that have led to a wealth of price management innovations, such as flat rates, freemium, pay-per-use, or pay-what-you-want. They also address the emergence of new price metrics, Big Data applications, two-sided price systems, negative prices, and the sharing economy, as well as emerging payment systems such as bitcoin. The result is a “bible” for leaders who recognize that price is not only a means to drive profit in the short term, but a tool to generate sustained growth in shareholder value over the longer term, and a primer for researchers, instructors, and students alike. Praise for Price Management “This book is truly state of the art and the most comprehensive work in price management.” - Prof. Philip Kotler, Kellogg School of Management, Northwestern University “This very important book

builds an outstanding bridge between science and practice.” - Kasper Rorsted, CEO, Adidas “This book provides practical guidelines on value creation, communication and management, which is an imperative for businesses to survive in the coming era of uncertainty.” - Dr. Chang-Gyu Hwang, Chairman and CEO, KT Corporation (Korea Telecom) *Integrated Information Management* Schäffer-Poeschel In 1933, when she is ten, Berliner Inge Deutschkron learns that she is a Jew. At first her family is at greater risk for their leftist politics than because they are Jews. Her father flees to England; Inge and her mother hide in plain sight as non-Jews, dependent on the underground network for their survival, in constant danger of discovery or betrayal. Otto Weidt employed Inge in the office of his workshop for the blind. Toward the end of the war, Inge and her mother manage to leave Berlin, and eventually emigrate to England. Inge Deutschkron became an Israeli citizen and an editor of Maariv. “One of the greatest successes of German memoir literature” — Andreas Platthaus, Frankfurter Allgemeine “...

invaluable as testimony of the war years of one of Berlin’s 12,000 surviving Jews.” — Kirkus Reviews “[A] simple and charming memoir by a Jewish woman of how she survived as a girl in her late teens in wartime Berlin... Unsentimental, resilient and aware that luck can make all the difference, Inge Deutschkron... has remained a true Berliner.” — István Deák, The New York Review of Books **Statistical Analysis with Excel For Dummies** National Academies Press An impassioned look at games and game design that offers the most ambitious framework for understanding them to date. As pop culture, games are as important as film or television—but game design has yet to develop a theoretical framework or critical vocabulary. In Rules of Play Katie Salen and Eric Zimmerman present a much-needed primer for this emerging field. They offer a unified model for looking at all kinds of games, from board games and sports to computer and video games. As active participants in game culture, the authors have written Rules of Play as a catalyst for innovation, filled with new concepts, strategies, and methodologies for creating and

understanding games. Building an aesthetics of interactive systems, Salen and Zimmerman define core concepts like "play," "design," and "interactivity." They look at games through a series of eighteen "game design schemas," or conceptual frameworks, including games as systems of emergence and information, as contexts for social play, as a storytelling medium, and as sites of cultural resistance. Written for game scholars, game developers, and interactive designers, *Rules of Play* is a textbook, reference book, and theoretical guide. It is the first comprehensive attempt to establish a solid theoretical framework for the emerging discipline of game design.

The co-founder of EVA shows how to apply it in today's new economy EVA-economic valued added-is a measure of the true financial performance of a company, and a strategy for creating corporate and shareholder wealth. It is also a method of changing corporate priorities and behavior throughout a company, right down to the "shop floor." In *The EVA Challenge*, the authors outline how to implement EVA-from training employees to answering the most frequently encountered implementation problems faced by companies. This detailed "how-to" guide represents the second phase in the "EVA Revolution", showing executives around the world how to customize and implement EVA at their companies. Here, EVA converts learn how to work some "EVA magic" through company-specific

initiatives and case study examples. Coverage includes completely new materials on "real options", leveraged stock options, and other concepts critical to corporations in both new and old economy industry sectors.

The dynamics of economic development and its dependence on global interactions are growing faster than ever before. This makes forecasting the future particularly difficult. Nevertheless, a look at long-term trends offers an opportunity to open the discussion about what reality might await us tomorrow and how we intend to deal with it. From the point of view of the member institutes of the Fraunhofer Group for Innovation Research, this paper presents a selection of trends that will have a significant impact on innovation

systems in the period up to 2030. On this basis, theses for innovation in the year 2030 are derived providing the baseline for discussions on the requirements to ensure future competitiveness.

Research Handbook on Intellectual Property and Competition Law NYU Press
Rhetoric and stylistics deal with successful human communication and the arrangement of language in texts. As the most influential of all language-related disciplines, rhetoric has an ancient tradition and is presently experiencing a remarkable revival. Stylistics analyzes the structures of texts with regard to their semantic potential and their function in the life of the individual and in society. The handbook offers surveys of theoretical approaches, forms of linguistic practice and practical contexts from antiquity to the present.

From Computer Literacy to Informatics Fundamentals Routledge
This book project highlights creative approaches to planning and local

development. The dynamic complexity, diversity and fluidity which characterize contemporary society represent challenges for planning and development endeavours. While research and policy work has extensively focused on large cities and on metropolitan regions, there has been relatively little work on 'smaller places'. This book shows that if these new challenges affect all places and regions, small and medium-sized towns (SMSTs) are suffering many specific problems that call imperatively for the design and implementation of very imaginative, creative approaches to planning and local development. What could enhance creativity in local development and planning? Is it possible to talk about creative capacity building at the level of a town that might release imaginative and innovative activities? Under what local and non-local conditions is creativity being initiated and flourishing? What are the major obstacles and in what way can these be contained in order to safeguard pockets of creative action? Interdisciplinary and with case studies from France, Norway and other European countries, this volume presents a wide

range of approaches and territorial contexts of small cities and towns in which spatial dynamics and the consequences of the city-region for urban planning theory and practice in Europe are highlighted, with a special focus on the challenges for - and understanding of - planning and development of SMSTs. It provides a significant body of critical, comparative and contextual perspectives on the quest for urban sustainability and resilience in SMSTs, therefore emphasizing collaborative and potentially innovative approaches that can be detected, but also the shortcomings, pitfalls and 'traps' that can lie behind the approaches aimed at concerting ecological, economic, and socio-cultural concerns, and the discourses promoting them.

Animal Beauty Psychology Press
An illustrated exploration of colors and patterns in the animal kingdom, what they communicate, and how they function in the social life of animals. Are animals able to appreciate what humans refer to as "beauty"? The term scarcely ever appears nowadays in a scientific description of living things, but we humans may nonetheless find the colors, patterns, and

songs of animals to be beautiful in apparently the same way that we see beauty in works of art. In *Animal Beauty*, Nobel Prize-winning biologist Christiane Nüsslein-Volhard describes how the colors and patterns displayed by animals arise, what they communicate, and how they function in the social life of animals. Watercolor drawings illustrate these amazing instances of animal beauty. Darwin addressed the topic of ornament in his 1871 book *The Descent of Man and Selection in Relation to Sex*, and did not hesitate to engage with criteria of beauty, convinced that animals experienced color and ornament as attractive and agreeable in the same way that we do, and that the role this played in mate choice pointed to a “sexual selection” distinct from natural selection. Nüsslein-Volhard examines key examples of ornament and sexual selection in the animal kingdom and lays the groundwork for biological aesthetics. Noting that color patterns have not been a research priority—perhaps because they appeared to be nonessential luxuries rather than functional necessities—Nüsslein-Volhard looks at recent scientific developments on the

topic. In part because of Nüsslein-Volhard's own research on the zebrafish, it is now possible to decipher the molecular genetic mechanisms that lead to production of colors in animal skin and its appendages and control its pattern and distribution.

Microsoft Teams For Dummies Fraunhofer-Verbund Innovationsforschung Nature provides us with many services seemingly for free: recharged groundwater, fertile soil and plant biomass created by photosynthesis. We human beings draw extensive benefits from these “ecosystem services,” or ES – food, water supply, recreation and protection from natural hazards. Major international studies, such as the Millennium Ecosystem Assessment, have addressed the enormous role of biodiversity and ecosystems to human well-being, and they draw particular attention to the consequences resulting from the reduction or loss of these services. These very topical issues are being addressed by authors/scientists in a wide variety of disciplines – and their approaches, terminologies and methodological specifics are just as diverse. What, for

example, does the efficacy of nature or natural capital mean? Which values of nature are particularly important, how are they distributed in space and time and how can they be assessed and the relevant knowledge promoted? Can all ecosystem services be quantified and even monetarised? What should be done to ensure that the multiple services of nature will be available also in future? This book explains the multifaceted concept of ecosystem services, provides a methodological framework for its analysis and assessment, and discusses case examples, particularly from Germany. It is addressed to scientists and practitioners in the administrative, volunteer and professional spheres, especially those who deal with environment, landscape management and nature conservation and regional and land-use planning. The target group includes experts from the business community, politicians and decision makers, students and all those interested in fundamental ecological, economic, ethical and environmental issues. *Assessment Matters In Higher Education* Springer Science & Business Media An overview of the rapidly growing field of

ant colony optimization that describes theoretical findings, the major algorithms, and current applications. The complex social behaviors of ants have been much studied by science, and computer scientists are now finding that these behavior patterns can provide models for solving difficult combinatorial optimization problems. The attempt to develop algorithms inspired by one aspect of ant behavior, the ability to find what computer scientists would call shortest paths, has become the field of ant colony optimization (ACO), the most successful and widely recognized algorithmic technique based on ant behavior. This book presents an overview of this rapidly growing field, from its theoretical inception to practical applications, including descriptions of many available ACO algorithms and their uses. The book first describes the translation of observed ant behavior into working optimization algorithms. The ant colony metaheuristic is then introduced and viewed in the general context of combinatorial optimization. This is followed by a detailed description and guide to all major ACO algorithms and a report on current

theoretical findings. The book surveys ACO applications now in use, including routing, assignment, scheduling, subset, machine learning, and bioinformatics problems. AntNet, an ACO algorithm designed for the network routing problem, is described in detail. The authors conclude by summarizing the progress in the field and outlining future research directions. Each chapter ends with bibliographic material, bullet points setting out important ideas covered in the chapter, and exercises. Ant Colony Optimization will be of interest to academic and industry researchers, graduate students, and practitioners who wish to learn how to implement ACO algorithms.

“Hurry Down Sunshine is about tenacity and tenderness...but mostly it’s about love.” —OPRAH WINFREY AN AMAZON BEST BOOK OF THE MONTH PICK This international bestseller is an extraordinary family story and an exceptionally powerful memoir about coping with bipolar disorder, now with a new afterword for the ten-year anniversary edition. Michael Greenberg recounts in vivid detail the remarkable

summer when, at the age of fifteen, his daughter was struck mad. It begins with Sally's sudden visionary crack-up on the streets of Greenwich Village, and continues, among other places, in the out-of-time world of a Manhattan psychiatric ward during the city's sweltering summer. It is a tale of a family broken open, then painstakingly, movingly stitched together again. Greenberg's unforgettable cast of characters includes an unconventional psychiatrist, an Orthodox Jewish patient, a manic Classics professor, a movie producer, and a landlord with literary aspirations. Unsentimental, nuanced, and deeply humane, *Hurry Down Sunshine* is essential reading in the literature of affliction with such classics as *Girl, Interrupted* and *An Unquiet Mind*. *Excel und die Abgeltungssteuer* Plunkett Lake Press

Event marketing is a powerful tool of brand communication and used within many different fields. Florian Neus extends the existing scientific literature to events of higher education institutions and events within digital environments. Different aspects of event marketing efforts within these fields are addressed and evaluated.

Based on conducted studies and coherent analysis new insights are derived.

Furthermore, valuable implications for research and management are presented. About the Author: Florian Neus works as a research assistant at the chair of marketing and retailing at the University of Siegen. His research focusses around higher education marketing and event marketing in digital environments.
