papers presented at the Tenth  
International Conference on Bridge  
Maintenance, Safety and Management  
(IABMAS 2020), held in Sapporo,  
Hokkaido, Japan, April 11–15, 2021. This  
volume consists of a book of extended  
abstracts and a USB card containing the  
full papers of 571 contributions  
presented at IABMAS 2020, including the  
T.Y. Lin Lecture, 9 Keynote Lectures, and  
561 technical papers from 40 countries.  
The contributions presented at IABMAS  
2020 deal with the state of the art as  
well as emerging concepts and  
innovative applications related to the  
main aspects of maintenance, safety,

management, life-cycle sustainability and technological innovations of bridges. Major topics include: advanced bridge design, construction and maintenance approaches, safety, reliability and risk evaluation, life-cycle management, life-cycle sustainability, standardization, analytical models, bridge management systems, service life prediction, maintenance and management strategies, structural health monitoring, non-destructive testing and field testing, safety, resilience, robustness and redundancy, durability enhancement, repair and rehabilitation, fatigue and corrosion, extreme loads, and application of information and computer technology and artificial intelligence for bridges, among others. This volume provides both an up-to-date overview of

the field of bridge engineering and significant contributions to the process of making more rational decisions on maintenance, safety, management, life-cycle sustainability and technological innovations of bridges for the purpose of enhancing the welfare of society. The Editors hope that these Proceedings will serve as a valuable reference to all concerned with bridge structure and infrastructure systems, including engineers, researchers, academics and students from all areas of bridge engineering.

*Report of the Department of Public Works* Bloomsbury Publishing

Robert Scott Burn wrote this book in 1871 at a time of great developments in science, industry and exploration, and when materials for engineering and building were constantly being improved and replaced. It offers, therefore, a useful coverage of both traditional techniques and materials such as stone, brick and pise, but also examines the developments in the use of cement for wall covering as well as cement blocks to be used as artificial stone. This reprint of the original work contains over 400 pages of text dealing with materials, practical construction techniques, masonry and brickwork, principles of design, drawing, plastering and wall

decoration, as well as many other aspects of construction. The 160 plates which accompany the text include a large number of drawings of different parts of buildings, including: window, door and wall details in various styles; arches; staircases; consoles and brackets in stone and terracotta; hollow and ornamental brickwork and designs of shop fronts.
