"Eureka! Skousen has done the impossible. Students love it! I will never use another textbook again."—Harry Veryser, University of Detroit-Mercy They said it couldn't be done. Austrian economics is so different, they said, that it couldn't be integrated into standard "neo-classical" textbooks. Consequently, college students learn nothing about the great Austrian economists (Mises, Hayek, Schumpeter). Professor Mark Skousen's *Economic Logic* aims to change that. Based on his popular course taught at Columbia University, Skousen starts his "micro" section with Carl

Menger's "theory of the good" and the profit-and-loss income statement to explain the dynamics of the market process, entrepreneurship, and the advantages of saving. Then he uses a powerful Hayekian four-stage model of the economy to introduce "macro," including a new Austrian measure of spending at all stages of production (Gross Domestic Expenditures). *Economic Logic* also offers chapters on: The international gold standard, the defects of central banking, and the Mises/Hayek theory of the business cycle. A full critique of the Keynesian Aggregate Supply and Demand (AS-AD) model, and a revolutionary Austrian alternative. Entrepreneurship, the financial markets, environmental economics, monetary policy and inflation, federal spending and taxes, and government regulation. Leaders of all schools, including Austrian, Keynesians, Marxist, Chicago, and Public Choice.

This lively introduction to heterodox economics provides a balanced critique of the standard introductory macroeconomic curriculum. In clear and accessible prose, it explains many of the key principles that underlie a variety of alternative theoretical perspectives (including institutionalist economics, radical economics, Post Keynesian economics, feminist economics, ecological economics, Marxist economics, social economics, and socioeconomics). Because the book's structure parallels the chapters and subject matter presented in a typical introductory macroeconomics textbook, "Reintroducing Macroeconomics" provides readers with a running commentary on the standard approach, while simultaneously introducing them to a broader

range of ideas about the causes and appropriate policy responses to a wide range of common economic problems. Although designed primarily as a companion volume for students in introductory economics courses, the book can also be used effectively for more targeted applications that highlight a particular economic issue or approach. It will be of particular interest to students in related disciplines (such as American Studies, anthropology, black studies, environmental studies, gender studies, history, political science, and sociology) who may be required to take introductory economics classes and who are interested in gaining an alternative perspective. By demonstrating the vitality and common ground underlying a broad spectrum of heterodox approaches, "Reintroducing Macroeconomics" brings alternative perspectives into the classroom in an accessible way that empowers students to think about the economy in new and exciting ways. The text includes end-of-chapter study questions, as well as a detailed note to instructors.

Forestry Economics introduces students and practitioners to all

aspects of the management and economics of forestry. The book adopts the approach of managerial economics textbooks and applies this to the unique processes and problems faced by managers of forests. While most forestry economics books are written by economists for future economists, what many future forest and natural resource managers need is to understand what economic information is and how to use it to make better business and management decisions. John E. Wagner draws on his twenty years of experience teaching and working in the field of forest resource economics to present students with an accessible understanding of the unique production processes and problems faced by forest and other natural resource managers. There are three unique features of this book: The first is its organization. The material is organized around two common economic models used in forest and natural resources management decision making. The second is the use of case studies from various disciplines: Outdoor and Commercial Recreation, Wood Products Engineering, Forest Products, and Forestry. The purpose of these case studies is to provide students with applications of the concepts being discussed within the text. The third is revisiting the question of how to use economic information to make better business decisions at the end of each chapter. This ties each chapter to the preceding ones and reinforces the hypothesis that a solid working knowledge of these economic models and the information they contain are necessary for making better business decisions. This textbook is an invaluable source of clear and accessible information on forestry economics and management for not only economics students, but for students of other disciplines and those already working in forestry and natural resources.
