In the second half of the 20th century, the body has become a central theme of intellectual debate. How should we perceive the human body? Is it best understood biologically, experientially, culturally? How do social institutions exercise power over the body and determine norms of health and behavior? The answers arrived at by phenomenologists, social theorists, and feminists have radically challenged our conventional notions of the body dating back to 17th century Cartesian thought. This is the first volume to systematically explore the range of contemporary thought concerning the body and draw out its crucial implications for medicine. Its authors suggest that many of the problems often found in modern medicine -- dehumanized treatment, overspecialization, neglect of the mind's healing resources -- are directly traceable to medicine's outmoded concepts of the body. New and exciting alternatives are proposed by some of the foremost physicians and philosophers working in the medical humanities today.

The aim of this open access book is to review and analyse the goods and services of bivalve shellfish. How they are defined, what determines the ecological functions that are the basis for the goods and services, what controversies in the use of goods and services exist, and what is needed for sustainable exploitation of bivalves from the perspective of the various stakeholders. The book is focused on the goods and services, and not on impacts of shellfish aquaculture on the benthic environment, or on threats like biotoxins; neither is it a shellfish culture handbook although it can be used in evaluating shellfish culture. The reviews and analysis are based on case studies that exemplify the concept, and show the strengths and weaknesses of the current applications. The multi-authored reviews cover ecological, economic and social aspects of bivalve goods and services. The book provides new insights for scientists, students, shellfish producers, policy advisors, nature conservationists and decision makers. This book is open access under the CC BY license. This book considers the global discourses and debates about 'intoxication', engaging in critical academic discussion around this concept. The problems in defining intoxication are considered,

alongside the meanings of intoxication and how these meanings often differ across diverse drug using populations. The way that intoxication has been engaged with over the centuries has affected how particular groups are perceived and responded to, resulting in punitive responses such as drug prohibition, alongside harsh treatment of those who are seen to transgress societal norms and values. Therefore, this collection seeks to unsettle dominant discourses about intoxication and to consider this concept in new, critical ways. Ways of being intoxicated are also defined in this book in their broadest sense; from 'energy drinks' and other legal drugs, to recreational use of illicit drugs such as ecstasy, to 'problematic' drug use.

Why is split second decision-making superior to deliberation? Gut Feelings delivers the science behind Malcolm Gladwell's Blink. Reflection and reason are overrated, according to renowned psychologist Gerd Gigerenzer. Much better qualified to help us make decisions is the cognitive, emotional, and social repertoire we call intuition, a suite of gut feelings that have evolved over the millennia specifically for making decisions. Gladwell drew heavily on Gigerenzer's research. But Gigerenzer goes a step further by explaining just why our gut instincts are so often right. Intuition, it seems, is not some sort of mystical chemical reaction but a neurologically based behavior that evolved to ensure that we humans respond quickly when faced with a dilemma (BusinessWeek).
