FARMER ATKINSON

After Fidel Springer
Nature

This book presents an overview of the ways in which women have been able to conduct

mathematical research since the 18th century, despite their general exclusion from the sciences. Grouped into four thematic sections, the authors concentrate on well-known figures like Sophie Germain and Grace Chisholm Young, as well as those who have remained unnoticed by historians so far. Among them are Stanisława Nidodym, the first female students at the universities in Prague at the turn of the 20th century, and the first female professors of

mathematics in Denmark. Highlighting individual biographies, couples in science, the situation at specific European universities, and sociological factors influencing specific careers from the 18th century to the present, the authors trace female mathematicians' status as it evolved from singular and anomalous to virtually commonplace. The book also offers insights into the various obstacles women faced when trying to enter perhaps the "most male"

discipline of all, and how some of them continue to shape young girls' self-perceptions and career choices today. Thus, it will benefit scholars and students in STEM disciplines, gender studies and the history of science; women in science, mathematics and at institutions, and those working in mathematics education.

Working with the Anthropological Theory of the Didactic in Mathematics Education

Verso

This report identifies

several important trends that are shaping regional security. It examines traditional security concerns, such as energy security and the proliferation of weapons of mass destruction, as well as newer challenges posed by political reform, economic reform, civil-military relations, leadership change, and the information revolution. The report concludes by identifying the implications of these trends for U.S. foreign policy.

The Future Security

Environment in the Middle East Springer Nature

A crucial question throughout the Middle Ages, the relationship between body and spirit cannot be understood without an interdisciplinary approach – combining literature, philosophy and medicine. Gathering contributions by leading international scholars from these disciplines, the collected volume explores themes such as lovesickness, the five senses, the role of memory and passions, in order to shed new light on

the complex nature of the medieval Self.

Science between Europe and Asia

University of Michigan Press

This book explores the various historical and cultural aspects of scientific, medical and technical exchanges that occurred between central Europe and Asia. A number of papers investigate the printing, gunpowder, guncasting, shipbuilding, metallurgical and drilling technologies while others deal with mapping techniques, the

adoption of written calculation and mechanical clocks as well as the use of medical techniques such as pulse taking and electrotherapy. While human mobility played a significant role in the exchange of knowledge, translating European books into local languages helped the introduction of new knowledge in mathematical, physical and natural sciences from central Europe to its periphery and to the Middle East and Asian cultures. The book argues

that the process of transmission of knowledge whether theoretical or practical was not a simple and one-way process from the donor to the receiver as it is often admitted, but a multi-dimensional and complex cultural process of selection and transformation where ancient scientific and local traditions and elements. The book explores the issue from a different geopolitical perspective, namely not focusing on a singular recipient and several points of

distribution, namely the metropolitan centres of science, medicine, and technology, but on regions that are both recipients and distributors and provides new perspectives based on newly investigated material for historical studies on the cross scientific exchanges between different parts of the world.

Peer reviewed articles from the Natural Language Processing and

Cognitive Science (NLPCS) 2014 meeting in October 2014 workshop. The meeting fosters interactions among researchers and practitioners in NLP by taking a Cognitive Science perspective. Articles cover topics such as artificial intelligence, computational linguistics, psycholinguistics, cognitive psychology and language learning. *The Mathematical Writings of Évariste Galois* SAGE
 Today's kindergarten is the onset of formal

schooling for children--the first time families, schools, teachers, and communities come together to form an educational partnership. In this thought-provoking, issues-focused book, the experts explore the research on early schooling and give you a starting point with which to reexamine your beliefs, policies, and practices regarding the first years of school. Scholars, researchers, and other professionals will discover why early school transitions need to be

improved and how these critical transitions affect children's future educational success. You'll learn about readiness assessment entrance ages grade retention classroom structure family-school-community partnerships cultural diversity children with disabilities children in poverty This book is part of a series edited by Donald B. Bailey, Jr., Ph.D., and developed in conjunction with the National Center for Early Development and Learning (NCEDL). Visit

NCEDL's website for information on the center's research, upcoming meetings, and free online publications..

Science as a Way of Knowing John Benjamins Publishing Company *Women and Power at the French Court, 1483-1563* explores the ways in which a range of women - as consorts, regents, mistresses, factional power players, attendants at court, or as objects of courtly patronage - wielded power in order to advance individual, familial, and factional

agendas at the early sixteenth-century French court. Spring-boarding from the burgeoning scholarship of gender, the political, and power in early modern Europe, the collection provides a perspective from the French court, from the reigns of Charles VIII to Henri II, a time when the French court was a renowned center of culture and at which women played important roles. Crossdisciplinary in its perspectives, these essays by historians, art and literary scholars

investigate the dynamic operations of gendered power in political acts, recognized status as queens and regents, ritualized behaviors such as gift-giving, educational coteries, and through social networking, literary and artistic patronage, female authorship, and epistolary strategies.

World Who's who in Science Springer Science & Business Media

In this book it explores science and technology, makes connections

between these epistemic, cultural, and political trends, and develops profound insights into the nature of our postmodernity.

Creativity for 21st Century Skills Council of Europe

As requested by the National Science Foundation (NSF) and the Interagency Committee for Extramural Mathematics Programs (ICEMAP), this report updates the 1984 Report known as the "David Report." Specifically, the charge directed the committee to (1) update

that report, describing the infrastructure and support for U.S. mathematical sciences research; (2) assess trends and progress over the intervening five years against the recommendations of the 1984 Report; (3) briefly assess the field scientifically and identify significant opportunities for research, including cross-disciplinary collaboration; and (4) make appropriate recommendations designed to ensure that U.S. mathematical

sciences research will meet national needs in coming years. Of the several components of the mathematical sciences community requiring action, its wellspring--university research departments--is the primary focus of this report. The progress and promise of research--described in the 1984 Report relative to theoretical development, new applications, and the refining and deepening of old applications--have if anything increased since 1984, making

mathematics research ever more valuable to other sciences and technology. Although some progress has been made since 1984 in the support for mathematical sciences research, the goals set in the 1984 Report have not been achieved. Practically all of the increase in funding has gone into building the infrastructure, which had deteriorated badly by 1984. While graduate and postdoctoral research, computer facilities, and new institutes have benefited from increased

resources, some of these areas are still undersupported by the standards of other sciences. And in the area of research support for individual investigators, almost no progress has been made. A critical shortage of qualified mathematical sciences researchers still looms, held at bay for the moment by a large influx of foreign researchers, an uncertain solution in the longer term. While government has responded substantially to the 1984 Report's

recommendations, particularly in the support of infrastructure, the universities generally have not, so that the academic foundations of the mathematical sciences research enterprise are as shaky now as in 1984. The greatest progress has been made in the mathematics sciences community, whose members have shown a growing awareness of the problems confronting their discipline and increased interest in dealing with the

problems, particularly in regard to communication with the public and government agencies and involvement in education. (AA)

This is a compelling behind-the-scenes account of the extraordinary Castro brothers and the dynastic succession of Fidel's younger brother Raul. Brian Latell, the CIA analyst who has followed Castro since the sixties, gives an unprecedented

view into Fidel and Raul's remarkable relationship, revealing how they have collaborated in policy making, divided responsibilities, and resolved disagreements for more than forty years-- a challenge to the notion that Fidel always acts alone. Latell has had more access to the brothers than anyone else in this country, and his briefs to the CIA informed much of U.S. policy. Based on his knowledge of Raul Castro, Latell makes projections on what kind of leader Raul will be and how the

shift in power might influence U.S.-Cuban relations.

Renewing U.S.

Mathematics Springer

In this erudite and profusely illustrated history of perception, Barbara Stafford explores a remarkable set of body metaphors deriving from both aesthetic and medical practices that were developed during the enlightenment for making visible the unseeable aspects of the world. While she focuses on these metaphors as a reflection of the changing

attitudes toward the human body during the period of birth of the modern world, she also presents a strong argument for our need to recognize the occurrence of a profound revolution—a radical shift from a textbased to a visually centered culture. Stafford argues, in fact, that modern societies need to develop innovative, nonlinguistic paradigms and to train a broad public in visual aptitude.

[The SAGE Handbook of Diplomacy](#) Springer

Nature

This book presents the main research veins developed within the framework of the Anthropological Theory of the Didactic (ATD), a paradigm that originated in French didactics of mathematics. While a great number of publications on ATD are available in French and Spanish, *Working with the Anthropological Theory of the Didactic in Mathematics Education* is the first directed at English-speaking international audiences.

Written and edited by leading researchers in ATD, the book covers all aspects of ATD theory and practice, including teaching applications. The chapters feature the most relevant and recent investigations presented at the 6th international conference on the ATD, offering a unique opportunity for an international audience interested in the study of mathematics teaching and learning to keep in touch with advances in educational research. The book is divided into four

sections and the contributions explore key topics such as: The core concept of 'praxeology', including its development and functionalities The need for new teaching praxeologies in the paradigm of questioning the world The impact of ATD on the teaching profession and the education of teachers This is the second volume in the New Perspectives on Research in Mathematics Education. This comprehensive casebook is an indispensable resource for researchers,

teachers and graduate students around the world.

The Transition to Kindergarten

Birkhäuser Stephen Toulmin argues that the potential for reason to improve our lives has been hampered by a serious imbalance in our pursuit of knowledge. The centuries-old dominance of rationality has diminished the value of reasonableness.

Toulmin issues a powerful call to redress the balance between rationality and reasonableness.

The Postmodern

Condition Walter de Gruyter GmbH & Co KG This book is the product of a collaborative effort involving partners from Africa, Asia, Europe and Latin America who were funded by the International Development Research Centre Programme on Women and Migration (2006-2011). The International Institute of Social Studies at Erasmus University Rotterdam spearheaded a project intended to distill and refine the research findings, connecting them

to broader literatures and interdisciplinary themes. The book examines commonalities and differences in the operation of various structures of power (gender, class, race/ethnicity, generation) and their interactions within the institutional domains of intra-national and especially inter-national migration that produce context-specific forms of social injustice. Additional contributions have been included so as to cover issues of legal liminality and how the

social construction of not only femininity but also masculinity affects all migrants and all women. The resulting set of 19 detailed, interconnected case studies makes a valuable contribution to reorienting our perceptions and values in the discussions and decision-making concerning migration, and to raising awareness of key issues in migrants' rights. All chapters were anonymously peer-reviewed. This book resulted from a series of projects funded by the

International Development Research Centre (IDRC), Canada. Body and Spirit in the Middle Ages National Academies Press
How a study of anti-Epicurian discourse can lead us to a better understanding of the cultural history of Epicurianism
Migration, Gender and Social Justice Springer
Science & Business Media
In this feminist exploration of the erotics of the marketplace, Hegel's notion of property and Lacan's idea of the

phallus serve parallel functions in creating the subjectivity necessary for self-actualization. Subjectivity requires intersubjective relationships mediated through a regime of possessing, enjoying, and exchanging an object of desire. For Hegel, this regime is property; for Lacan, it is sexuality, symbolized by the Phallus, which we conflate with the male organ and the female body. Property law, in Jeanne Schroeder's account, is implicitly figured by similar

anatomical metaphors for that which men wish to possess and that which women try to be and enjoy. This is reflected in imagery taken from ancient Rome—the axe and bundle of sticks known as the Fasces, and the virgin priestess called the Vestal. Schroeder traces the persistence of phallic metaphors in modern jurisprudence. Rejecting the dominant schools of legal feminism, she reconceptualizes property—the legal relationship as well as its not necessarily material

object—as a necessary moment in the human struggle for love and recognition. The Feminine, for Schroeder, is the radical negativity at the heart of both Lacan's split subject and Hegel's concept of freedom. Feminine emancipation and private property are, therefore, equally necessary conditions for the actualization of the free individual and the just society. Feminist scholars, social theorists, political scientists, philosophers, and lawyers will find in Schroeder's

analysis scintillating new perspectives on property theory and the feminine within the market and the law.

World Who's who in

Science Chicago, Marquis-Who's Who, Incorporated [1968]

This book represents the first multidisciplinary scientific work on a deep volcanic maar lake in comparison with other similar temperate lakes. The syntheses of the main characteristics of Lake Pavin are, for the first time, set in a firmer footing comparative

approach, encompassing regional, national, European and international aquatic science contexts. It is a unique lake because of its permanently anoxic monimolimnion, and furthermore, because of its small surface area, its substantially low human influence, and by the fact that it does not have a river inflow. The book reflects the scientific research done on the general limnology, history, origin, volcanology and geological environment as

well as on the geochemistry and biogeochemical cycles. Other chapters focus on the biology and microbial ecology whereas the sedimentology and paleolimnology are also given attention. This volume will be of special interest to researchers and advanced students, primarily in the fields of limnology, biogeochemistry, and aquatic ecology. *Women and Power at the French Court, 1483-1563* Rand Corporation
VERY practical, on target

for schools today—good balance of theory with anecdotal connections.” “At first I was worried about the time involved. I discovered when given 5 minutes . . . the time is a continuation to their work in progress. Realizing that creativity does not have to consume large chunks of time is more meaningful than tokens.” “I like the tone of the writing. It feels like there is a conversation going on.” “I like the stories of famous people and how their creativity influenced and changed their lives.”

CREATIVITY FOR 21ST CENTURY SKILLS describes what many creative people really do when they create. It focuses on the practical applications of a theoretical approach to creativity training the author has developed. Many suggestions for enhancing creativity focus on ideas that are over 60 years old. This new approach may be helpful for those seeking to develop 21st Century Skills of creativity. Five core attitudes (Naiveté, Risk-taking, Self-

Discipline, Tolerance for Ambiguity, and Group Trust), Seven I’s (Inspiration, Intuition, Improvisation, Imagination, Imagery, Incubation, and Insight), and several General Practices—the use of ritual, meditation, solitude, exercise, silence, and a creative attitude to the process of life, with corresponding activities, are described, discussed, and illustrated. A discussion of how to be creative within an educational institution is also included. JANE PIIRTO

is Trustees' Distinguished Professor at Ashland University. Her doctorate is in educational leadership. She has worked with students pre-K to doctoral level as a teacher, administrator, and professor. She has published 11 books, both literary and scholarly, and many scholarly articles in peer-reviewed journals and anthologies, as well as several poetry and creative nonfiction chapbooks. She has won Individual Artist Fellowships from the Ohio Arts Council in both

poetry and fiction and is one of the few American writers listed as both a poet and a writer in the Directory of American Poets and Writers. She is a recipient of the Mensa Lifetime Achievement Award, of an honorary Doctor of Humane Letters, was named an Ohio Magazine educator of distinction. In 2010 she was named Distinguished Scholar by the National Association for Gifted Children.

Catalogue of the Public Archives Library Univ of California Press

"The aim of this study is to track De Rerum Natura along two paths of satire. One is the broad boulevard of satiric literature from the beginnings of Greek poetry to the plays, essays, and broadcast media of the modern world. The other is the narrower lane of Roman verse satire, *satura*, whose canon begins in the Middle Republic with Ennius and Lucilius and closes with Juvenal, an author of the Flavian era. The first main portion of this book (chapters 2-3)

focuses on Lucretius and Roman satira, while the following chapters broaden the scope to satiric elements of Lucretius more generally, but still with plenty of reference to the poets of Roman satira as satirists par excellence. By examining how Lucretius' poem employs the tools, techniques, and tactics of satire-by evaluating how and where in *De Rerum Natura* the speaker functions as a satirist-we gain, I argue, a fuller, richer understanding of how the poem works and

how its poetry interacts with its purported philosophical program. Attention to the role of *De Rerum Natura* in the more specific tradition of Roman verse satire demonstrates that Lucretius' poem stands as a detour on the genre's highway, a swerve in the trajectory of satira. The numerous satiric passages and frequently satiric narrator of *De Rerum Natura* draw on earlier Roman satire, and in turn the poem influences the later satiric verse of Horace, Persius,

and Juvenal. While *De Rerum Natura* is not in and of itself a member of the Roman genre of satire, it is an important player in the genre's development"--

University of Michigan Press
Defending ethics in sport is vital in order to combat the problems of corruption, violence, drugs, extremism and other forms of discrimination it is currently facing. Sport reflects nothing more and nothing less than the

societies in which it takes place. However, if sport is to continue to bring benefits for individuals and societies, it cannot afford to neglect its ethical values or ignore these scourges. The major role of the Council of Europe and the Enlarged Partial Agreement on Sport (EPAS) in addressing the new challenges to sports ethics was confirmed by the 11th Council of Europe Conference of Ministers responsible for Sport, held in Athens on

11 and 12 December 2008. A political impetus was given on 16 June 2010 by the Committee of Ministers, with the adoption of an updated version of the Code of Sports Ethics (Recommendation CM/Rec(2010)9), emphasising the requisite co-ordination between governments and sports organisations. The EPAS prepared the ministerial conference and stepped up its work in an international conference organised with the University of Rennes,

which was attended by political leaders, athletes, researchers and officials from the voluntary sector. The key experiences described in the conference and the thoughts that it prompted are described in this publication. All the writers share the concern that the end result should be practical action - particularly in terms of the setting of standards - that falls within the remit of the EPAS and promotes the Council of Europe's core values.
